J. J. Enslie, sworn, said: The articles of the *Clifton* do not set forth the number of men who are engaged as sailors; furthermore a copy of these articles has not been made accessible to the crew.

Defendant said that he knew of no law requiring the number of men engaged as sailors to be stated, and further that the articles had been handed to him by his consul at Antwerp, and he understood them to be in order. That was early in March or April. The Consul had handed the articles to him without comment. He had exposed no copy of the articles of agreement on board

Find £1 for failure to keep copy of agreement accessible to crew.

Tuesday, October 30, 1877.

J. M. Patterson, engineer of the *Massilia*, was charged with being drunk and assaulting a police officer.

Police constable Schultz deposed that a Japanese policeman came to the station for assistance. Witness went along and found the prisoner asleep in the road, and took him to the station.

Takahashi, a Japanese police officer, said that the prisoner had struck a Japanese and cut his head. He was arrested by Japanese policemen and bound, but at his request his hands were untied, and then he assaulted two or three of the police. He also drew a knife and struck one of the men on his cap.

Gonda, another policeman, said: At two o'clock this morning I went, in consequence of information received, to the house of a Japanese, whom I found with blood streaming from his head. I arrested the prisoner and took him to the Takashimacho police station. I reported the circumstance to Takahashi, who ordered the prisoner to be taken to the Yokohama police station. On his way thither, his hands were unloosened and he struck me, and from the cut on my cap I conclude that he had a knife. He then ran away and was pursued; he clutched me by the shoulder and tore my coat. Prisoner then went to sleep at the Tobe police station, and I reported the matter to the Sakaimachi police station.

Kuwada Yeishe said: This morning, between two and half-past two, the prisoner came in a jinrikisha and created a disturbance in my house. I interfered, and prisoner pushed me down stairs and hit me on the head. He came down after me, and assaulted me again. My face became covered with blood. The police were then sent for.

Prisoner said that he was first assaulted by the Japanese, and struck them in self defence. He denied having used a knife. He thought his word entitled to as much credit as that of a heathen Japanese.

Fined $5.00 and costs, or, in default, ten days' imprisonment.

Mr A. C. Dunn moved for a new trial of the lawsuit brought against him by Mr F. V. Dickins, and adjudged by this Court in favour of plaintiff on the 24th August last. In support of the motion, it was pleaded that the judgment was rendered in error, and also that the case had been heard without assessors.

Mr Dickins opposed the motion, and asked that the same be disallowed, with costs, on the plea that no written notice of the defendant's intention to move for a new trial had been given within the time appointed by the rules of this Court.

Both parties appeared personally in Court.

Judgment on the motion to be given on Thursday next, the 1st November.

IN THE U. S. CONSULAR-GENERAL COURT.

Before H. W. DENISON, Esq., Vice Consul-General.

Thursday, November 1, 1877.

F. V. DICKINS *vs.* A. C. DUNN.

(Adjourned from the 30th ultimo.)

On the motion made by defendant, Mr A. C. Dunn, for a new trial of the above case, His Honour to-day delivered the following

DECISION.

Judgment was rendered in this case by the Consul-General, sitting without assessors, on Aug. 24th, 1877. On the 1st September defendant filed a notice of his intention to move for a new trial, and on the 8th of the same month he filed the statement and affidavit, required by sec. 77 and 78 of the Consular Court Regulations. These papers were served on the plaintiff, and on the 27th September he filed a motion to the effect that the motion of the defendant be disallowed with costs for this reason: "No written notice of the defendant's intention to move for a new trial having been given within the time appointed by the rules of this Court, as that within which after rendition of the judgment in the said cause such written notice should have been given, and the requirements of rules 76, 77, and 78 thus and otherwise not having been complied with."

The only question at present before the Court is, whether the Court has the right to entertain a motion for a new trial, when said motion, or a notice of the intention to file such motion, is not filed within the time appointed by the Court Regulations.

"The Regulations for the Consular Courts of the U. S. of America in Japan" provide, sec. 78th: 'The party intending to move for a new trial shall give written notice of the same as follows: When the action has been tried by a Consul, sitting with assessors, within five days after the rendition of the judgment, and within two days after the judgment when tried by the Consul alone.'

So far as a new trial is concerned, therefore, the judgment became final and absolute upon the expiration of the time, within which the defendant's intention to move for a new trial should have been filed, and this Court is powerless to deprive the plaintiff of the right he has secured by the neglect or default of the defendant, and is equally powerless to relieve the defendant from the effect of the limitations above quoted.

The motion of the plaintiff is granted, and the motion of the defendant is disallowed with costs.

H. W. DENISON,
U. S. Vice Consul-General.

November 1st, 1877.

IN THE FRENCH CONSULAR COURT.

Before H. PIERRET, Esq., Consul.

Messrs. A. GERARD and G. BLAKEWAY, Assessors.

Tuesday, October 30, 1877.

A PILLON *vs.* C. MICHEL.

Plaintiff, as a privileged creditor on the estate of "*Les Forges Francaises*," claimed from defendant as liquidator of the said

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

estate the sum of $176.86, to wit house rent for the property No. 174, Settlement, during the month of January, 1877; $100.00, interest during six month, on the sum of $737.33, or $36.16, and further two months' rent, $30. He also claimed that the rent due to him for the four months February to June 1877, at the rate of $60.00 per month, ought not to suffer any deduction on account of fees to defendant as liquidator.

The parties appeared personally.

Defendant demanded that the claim be dismissed, as the estate was already liquidated, and plaintiff had not presented his present claim in due time.

Plaintiff said that when he had wanted to explain his present claim to defendant, the latter had ordered him out of the office. Mr Boudou could corroborate his evidence.

Defendant retorted that the reason why he ordered plaintiff out of the office was that plaintiff had said that, when defendant had to arrange money affairs, some of the money always stuck to his fingers He added that plaintiff had yesterday made him a proposition, through Mr Housenl, to arrange the matter by paying $40 00.

As the Court considered it requisite to take the evidence of Mr Boudou, the case was adjourned until 2 p.m.

The Court resumed its sitting at 2 p.m.

Jean Boudou, in reply to the Court, deposed that he remembers that he, one day, together with Mr Pillon, was in Mr Michel's office, and that witness there had stated to Mr Michel that the estate in liquidation was indebted to Mr Pillon in the sum of $100 on account of one month's house rent, and that Mr Michel had taken note of that observation.

Defendant denied this, and produced the instrument of liquidation dated 31st August, 1877, to which the signature of Mr Pillon is affixed.

Plaintiff produced a letter from defendant, dated the 20th September, 1877, in which the latter agreed that plaintiff, his signature to the above act notwithstanding, might attack the act of liquidation in open court, provided it be done within three months.

Defendant said, in reply to a question by the Court, that the reason why he gave that letter to plaintiff was that Mr Favre sent every day to him, defendant, to receive plaintiff's dividend, and in order to get rid of that bother he paid Mr Favre and gave plaintiff the above letter. With regard to the disputed house rent for two months, amounting to $10.00, he explained that after the liquidation was finished there remained a couple of machines, which, with the consent of Mr Boudou, were placed in a room belonging to Mr Pillon. As for the four months' house rent, February to June, at $60.00 per month, he produced plaintiff's receipts. Plaintiff had asked the Court to order that this money should not suffer any deduction on account of fees to the liquidator; but he would ask plaintiff whether he, when he built a house for other people, did not want to be paid for his trouble.

Judgment to be given on Saturday next, the 3rd November, at 10 a.m.

IN THE IMPERIAL GERMAN CONSULAR COURT.

Before E. ZAPPE, Esq., Consul.

Saturday, October 27, 1877.

Nang, the Chinese cabin boy on board the German 3-masted schooner *Friedrich*, was charged with assaulting the Captain on board this morning.

The accused denied the charge; he said that he shipped in Hakodate a couple of months since in the *Friedrich*, and that he some days ago told the captain that he wanted to leave the ship, but that the Captain told told him to wait five or six days more. Last night he asked leave to go ashore but the Captain refused him leave. Consequently he had made up his mind not to work to-day, and as the Captain called him this morning at 4 o'clock to make a fire in the kitchen, he answered that he was not the cook. The Captain then came into his cabin and dragged him out by the hair. He did not strike the Captain, nor did the Captain strike him.

Captain Höyer, master of the *Friedrich*, said that he called the accused this morning at four o'clock and as the accused refused to get up, witness went into his cabin and dragged him out by the hair. When they had arrived on the deck accused struck witness on the forehead. Witness does not know with what instrument he was struck, but the mark is yet visible on his forehead and this morning it was bleeding. He produced a sword-stick found in the bed of the accused.

Berthelsen, second mate in the *Friedrich*, deposed that when he came on deck this morning he saw the captain bleeding from his forehead. He did not see what took place between the captain and the Chinaman.

His Honour observed that the proper way for a ship-master to treat a refusal of duty on the part of any person on board was not to drag the guilty person by the hair upon the deck but to make a complaint in the Consulate. As to the charge against the Chinaman for assault, it was not proven and the Chinaman must be acquitted.

Captain Hoyer said that he did not want the Chinaman on board any longer.

IN THE TOKIO SAIBANSHO.

Before YAMAMOTO MASAMI, *Hanji*.

Saturday, October 27, 1877.

YOKOHAMA SALVAGE AND DIVERS' COMPANY, *vs* SAYESHI TAICHI.

This was a claim for $300, forfeited bargain money, $270,90 for iron sold and $150 damages for alleged breach of contract, by which defendant had become purchaser of a certain quantity of old iron.

Mr M. C. Bonger, a partner in the suing firm, appeared for plaintiffs; Suzuki Shinsuke, a resident of Tôkiô, for defendant.

Mr Bonger stated that on the 4th November, 1876, the plaintiffs entered into a contract (which was produced) with defendant, by which they agreed to sell to the defendant all the old iron they had on hand at the rate of $23.10 per ton, that defendant paid them 100 *yen* bargain money and promised to take delivery within twenty days. Defendant took delivery of fifteen tons within the said term, and he then asked for a prolongation of the term for taking delivery. The term was accordingly prolonged for twenty days more on condition of defendant paying additional 200 *yen* bargain money. On the 14th December, 1876, defendant took delivery of 35 tons and asked for a respite of five days more, within which to take delivery of the remainder of the iron. On the 5th February, 1877, defendant again asked for a prolongation of 25 days, to which plaintiffs consented by a document, dated the 5th February, 1877. However, defendant did not take delivery within the above term, but on the 1st March, 1877, he sent his *banto*, Nakayama by name, to plaintiffs with word that he would take the iron away the next day, but he did not come according to promise, and plaintiffs then informed defendant that they had sent the machinery for hoisting the iron to Yokoska, and would be unable to deliver the iron to defendant until the said machinery had come back from Yokoska. As soon as it had returned, plaintiffs sent words to defendant on the 18th March to come and take delivery, but defendant never came. On the 28th March plaintiffs informed defendant that, if he did not take delivery of the iron, the 300 *yen* bargain money paid would be forfeited. On the 31st March defendant came and asked for still further respite. Plaintiffs then told defendant that the bargain money should not be forfeited if defendant would agree to take delivery from the 1st April, of all their iron. This defendant agreed to, but he only took away two large pieces of iron on the 2nd April, and on the next day he failed to make his appearance. Plaintiffs now demand that the 300 *yen* bargain money be declared forfeited according to the document dated 5th February, 1877, and that defendant be ordered to pay $270.90 for the two large pices of iron taken away by him on the 2nd April, and further $150.00 damages for the loss sustained by plaintiffs in consequence of defendant's breach of contract.

On behalf of the defendant it was admitted that he had entered into the contract, dated the 4th November, 1876, about purchasing iron from the plaintiffs, that he had paid 300 *yen* bargain money, and that he up till the 14th December, 1876, had taken delivery of 50 tons of iron In a document, dated the 16th December, 1876, the total amount of iron sold to defendant was estimated at 70 tons, and when the 50 tons, already taken delivery of, are therefrom deducted, there remain 20 tons. The defendant had only wanted to buy 50 tons of iron from the plaintiff, but owing to his ignorance of of foreign language he was not aware that the contract, dated the 4th November, 1876, stipulated that "all the iron" should be taken delivery of by him. In this manner he became compelled to take delivery of 20 tons more. When he, on the 5th February, 1877, made a contract with plaintiffs, by which he obtained prolongation of the term for taking delivery, plaintiffs promised to have the two large pieces of iron hoisted out of the water; but when defendant on the 27th February sent his *banto* Nakayama to take delivery of them, then plaintiffs informed the latter that they had sent their hoisting machine to Yokoska, and requested him to wait until the machine came back. To this defendant agreed, and on the 18th March plaintiffs sent him word to come and take delivery as the machine had returned from Yokoska, but the defendant replied that the state of the tide at present caused some inconvenience to the transport. On the 28th March plaintiffs informed defendant that his bargain money would be forfeited if he did not take delivery, in consequence of which defendant, on the 31st March, went to see plaintiffs He told them, that he had already on the 27th February sent a person to take delivery, who was prevented from doing so by the plaintiffs not being prepared to deliver, and that it was very unreasonable on their part now to declare the bargain money forfeited on account of a short delay on defendant's part, caused by a difficulty in effecting the transport. This the plaintiffs at last admitted. Defendant never entered into a verbal contract to take "all plaintiffs' iron," as stated by plaintiffs. A proposal was made by plaintiffs to defendant to take over the iron remaining on their hands, and calculated to weigh 29 tons; defendant replied that he would take it at the estimation of 25 tons, but as this did not meet with plaintiffs' approval no agreement was effected. On the 1st April Shinsuke went to plaintiffs' office, but found it closed on account of it being Sunday; he returned the next day and took delivery of the two large pieces of iron. He then wanted to buy some more of the remaining iron, but plaintiffs asked for payment for the two large pieces of iron, although defendant had already paid 300 *yen* bargain money on the purchase of 70 tons. Out of these 70 tons 50 had already been taken delivery of and if defendant should now pay extra for the two large pieces of iron, then there would only remain 11 tons that had not been taken delivery of, and the bargain money would be in excess of the price agreed upon. The defendant therefore replied that the price of the large pieces ought to be deducted from the bargain money, or else, the price of the two large pieces, *plus* the price of the remaining 11 tons, be deducted from the bargain money, the deficiency to be made good by the defendant. But the plaintiffs contended that the iron, of which defendant was to take delievery, was not only 11 tons, but all the iron which plaintiffs had on hand, furthermore used bad language, as if defendant had stolen the two large pieces of iron. While defendant was still trying to bring plaintiffs to reason, he was unexpectedly summoned at their request to appear before this Court To sum up, defendant has throughout the whole affair acted according to contract, and there is therefore not the slightest reason why his

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

bargain money should be forfeited; defendant is prepared to take delivery of the remaining iron, whenever it pleases plaintiffs, on condition that the price be deducted from the bargain money, which will then still leave a surplus.

The Court delivered the following

JUDGMENT.

The plaintiffs state that the defendant made a verbal agreement to take delivery from the 1st April, 1877, of "all the iron" still remaining on plaintiffs' hands. Defendant, on the other hand, says that what he agreed to take delivery of from the 1st April was only the 20 tons left on his former contract. Every day's experience teaches us that nobody is careless in transacting business of great importance, and very particular in matters of small importance. If the plaintiffs really had, for the contract contained in the document dated the 16th December, 1876, and in virtue of which defendant was yet to take delivery of 20 tons of iron, substituted another, according to which defendant was to buy "all the iron" at a higher price, why did they not make a written contract? The plaintiffs say that they made a written contract with regard to the 20 tons, which was of small value, but only a verbal agreement with regard to "all the iron" remaining on their hands, which was of high value; however, for the above named reason, this statement is improbable and cannot be accepted. The defendant is therefore only bound to take delivery of 20 tons of iron.

The defendant having already taken delivery of a certain quantity out of the 20 tons, only 11 tons remained, and it was a breach of contract on defendant's part that he did not take delivery of these 11 tons, after the 2nd April, as had been verbally agreed upon on the 31st March. This latter agreemeent must be considered as having superseded that of the 5th February. Plaintiffs are therefore entitled to damages for the loss sustained by them in consequence of the defendant not having taken delivery of the 11 tons, but there is no reason why the plaintiffs should also demand forfeit of the 300 *yen* bargain money and payment of the price of the two large pieces of iron.

For these reasons the plaintiffs' claim is hereby dismissed.

THE TOKIO SAIBANSHO.

27th Oct., 10th year Meiji.

REUTER'S TELEGRAMS.

LONDON, October 25th, 1877.

INTELLIGENCE FROM THE SEAT OF WAR.

Despatches from Bucharest announce that the Roumanian troops have three times attacked the Gravitza Redoubt, but were unsuccessful.

Osman Pasha telegraphs that the Russian forces on the 19th October attacked the Turkish Right Wing East of Plevna, but were repulsed.

Russian troops have arrived before Kars and summoned the garrison to surrender.

Russian troops are marching towards Erzeroum.

COLLIERY EXPLOSION IN GREAT BRITAIN.

A terrible colliery explosion has taken place at High Blantyre, four hundred men being in the mine at time of the explosion, all of whom it is feared have perished.

London, 19th October, 1877.

According to a Russian official despatch, on the 15th instant, a complete victory was gained over the Turks under Ahmed Muktar Pasha at Aladjadagh.

The Russians took 32 guns, many prisoners, including seven Pashas and immense quantity of war material.

Ahmed Muktar Pasha fled to Kars.

This news is mostly confirmed by an official Turkish despatch.

London, 14th October, 1877.

The only news to hand from the seat of war is that a flood has carried away the bridge over the Danube at Nikopoli.

The prisoners in the Ponge case [who were all sentenced to death] have been respited.

The General Elections in France have resulted in the election of 320 Republican, and 210 Conservative candidates.

ARRIVAL OF THE ENGLISH MAIL.

London, 26th Sept:—The Chartered Bank pays a dividend of 3 per cent. for the half year.

London, 26th Sept.—Oriental Bank Corporation, £27. Chartered Bank, £23. Hongkong and Shanghai Bank. £34.

London, 29th Sept.—On the 22nd instant, severely contested engagements took place between the forces under Ismail Pasha and General Tergukasow, which lasted nine hours. The result was indecisive, both sides maintaining their positions. The Russian loss was 300; the Turkish 45.

London, 1st October.—The Porte has refused to comply with the Russian request to transport timber across the Danube for the ostensible purpose of erecting hospitals.

There has been a seizure of arms in Transylvania, destined for the irruption of 4,000 men over the mountains to destroy the Jassy line of railway. General Klapka disavows any connection with the movement, which he deprecates.

Suleiman Pasha telegraphs that, owing to bombardment from three sides, Russian tenure of the positions in the Schipka Pass is critical.

The revenue for the quarter shows a decrease of £110,000.

A Russian official despatch states that on the 27th instant, Ismail Pasha unsuccessfully attacked Tergukasow and was defeated with very heavy loss. The Russian loss was only 171.

A despatch from Ahmed Mukhtar Pasha states that several Russian battalions from Ardahan, having crossed the Kars river, were attacked and completely defeated by him.

London, 3rd October.—Ahmed Mukhtar Pasha, on the 1st instant, gained a complete victory over 10,000. The engagement lasted five hours, and the Russians were driven beyond the frontier with a loss of 400 men.

Osman Pasha telegraphs that the Russians are bombarding continuously to the eastward of Plevna.

A Russian official despatch states that the insurrection in the Caucasus is almost suppressed.

London, 3rd October.—Ahmed Mukhtar and Osman Pasha has been created Ghazis.

The Mansion House Famine Relief Fund amounts to £300,000.

A Russian reconnaisance of 6,000 men, made from Kustendji, withstood repeated charges from the enemy's cavalry; and approached near Bazardjik, which, however, they found strongly entrenched. They then returned.

A Russian official despatch states that a wide-spread insurrection has broken out in Daghestan and that the insurgents have been completely defeated and dispersed.

Several scientific bodies having made representations to the Privy Council respecting Dr. Hunter's researches, Lord Salisbury has sanctioned grants for similar observations to be made in England and for a daily solar photograph to be taken in India.

London, 4th October.—Reouff Pasha has been appointed Commander-in-Chief of the Turkish army in the Balkans, and Suleiman Pasha Commander-in-Chief of the Army of the Danube, whilst Mehemed Pasha has been recalled.

London, 4th October.—A Turkish official despatch states that a great battle was proceeding near Alexandropol on the 2nd instant, which was apparently in favour of the Turks. The *Daily News* correspondent states that the Russian army under the Grand Duke Michael has made a general attack on Ahmed Mukhtar Pasha, and carried the entrenchments, which are the key to his position. The further advance of the Russians, who bivouacked on the conquered positions, was however checked. The Russian loss was 1,500 men. Fighting recommenced on the following morning.

OBITUARY.—Major-General Louisada Barrow.

ARRIVAL OF THE FRENCH MAIL.

London, 20th September.—According to trustworthy intelligence, the interview between Prince Bismarck and Count Andrassy at Salzburg was a sequel to the late meeting between the Emperors of Austria and Germany at Ischl, to strengthen and complete the understanding between the three Emperors.

Mr. Fawcett, M.P., speaking at an Indian Famine meeting at Salisbury, deprecated a grant from the British Government, because it would, he said, weaken local energy. Economy, he said, urges retrenchment in the Indian army expenditure and the employment of the surplus on irrigation works. The Mansion House Relief Fund has reached £200,000.

Calcutta, 21st Sept.—An influential representative Famine Relief Meeting was held to-day at the Town Hall. Resolutions were passed favouring the object of appointing an influential representative committee to collect subscriptions and transmit the same wherever desirable. The

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Missionary Conference Committee have announced their intention to merge their funds. Mr. Wood, Secretary of the Chamber of Commerce, is appointed Treasurer, and Messrs. J. Fergusson and Kristodas Pal are appointed Secretaries. General subscribers are invited.

London, 21st Sept.—The Russian Imperial guard are daily passed through Bucharest on their way to the front.

London, 22nd September.—Marshal MacMahon's manifesto has caused uneasiness. The Republicans are indignant and have issued a counter-manifesto.

Paris, 22nd September.—The result of M. Gambetta's second trial is a confirmation of the previous sentence. An official decree orders the elections of the new Chamber of Deputies to be held on the 14th October. Both houses of the French Legislature are convoked for the 7th November.

London, 22nd Sept.—According to unofficial Turkish accounts, the attack by Mehemed Pasha was on the Russian positions beyond Banikalom, where the Russians were strongly entrenched in the village of Tchairkens and along the river. No Turkish official account of the battle has yet been received. General Ignatieff is in disgrace with the Czar, and has gone to Kiev.

The Colonel of the 69th Foot has been appointed Colonel of the 15th Foot, vice Drought deceased. The Colonel of the 54th has been appointed Colonel of the 69th. Lord Mark Ker has been appointed Colonel of the 54th.

London, 24th Sept.—A Russian official despatch states that the Russian loss at the Schipka Pass on the 17th instant was 30 officers and 1,000 men. The fighting is described as desperate.

London, 24th Sept.—A Russian official despatch states that the Turks on the 21st resumed the bombardment of Fort Nicholas in Schipka Pass and afterwards made repeated and unsuccessful attempts to carry it by assault. The fighting is continuous. On the 19th instant at nightfall, Ismail Pasha attacked the position occupied by General Tergukasow (in Armenia), but was defeated with great loss. Reuter's special correspondent states that Tergukasow's positions have been almost turned by the Turkish force south of Igdyr and that supplies are failing the Russians, owing to the failure of crops in the province of Erivan. A Turkish official despatch states that a Turkish division acting as convoy to ammunition has arrived within two hours' march from Plevna. Fighting took place at Biela on the 21st instant, but the result was indecisive.

Paris, 24th Sept.—An electoral manifesto by the late M. Thiers has appeared, in which he lays great stress upon the maintenance and stability of Republican ideas and declares that the Republic governed by an anti-Republican *personnel* is intolerable.

London, 24th Sept.—The examination of the detectives in connection with the Turf frauds has ended in all the defendants being committed for trial. Bail has only been accepted in the cases of Clarke and Froggatt.

Simla, 24th Sept.—The Turkish Envoy was met at Bulkahak by the Amir's troops and courtiers in durbar. The khans and elders welcomed him and brought him into the city under a salute. Ample provisions and all necessaries were stored at every stage of the journey by the Amir's orders. Sirdar Zakaria Khan was appointed to superintend all arrangements for His Excellency the Envoy's comfort.

London, 26th Sept.—The Turkish troops have occupied a natural stronghold in Roumania, opposite Silistria. The total Russian and Roumanian loss before Plevna has been 27,000 men.

London, 27th Sept.—The Mansion House Madras Famine Relief Fund now amounts to £250,000

M. Gambetta's appeal comes on for hearing in November.

London, 27th Sept.—The jury have returned a verdict of wiful murder in the Penge case, with a strong recommendation to mercy as regards the women. All the prisoners have been sentenced to death.

DOUBLE ACROSTIC.

Each gives three voyages to lasting fame;
Each on the chart leaves record of his name;
Yet in one point the close resemblance fails—

,, No. 2 Ching-pak	...	,, ...	$7.90 to $8.10	Japan Rice	... ... ,, ...$1.80 to $2.30
,, No. 3 Ke-pak	... ...	,, ...	$7.40 to $7.70	Kerosene Oil, nominal	... ... ,, ...$3.40 to $3.50

Kerosene Oil.—In the almost total absence of stock, the market has assumed a much firmer tone since the Japanese settlement of October accounts. Quotations are $3.40 to $3.50 for cargo on the spot, and $3.20 to $3.30 "to arrive."

EXPORTS.

Silk.—We yesterday published the following for the American Mail:—

During the rather long period which has intervened since our last report, a very important business has been done. For about ten days the quotations given in our last issue were well kept up, there having even been, at one time, a tendency towards higher rates. Unfavourable advices from Europe, however, have since caused heavy rejections to be made, and arrivals having been very large, native dealers are now ready sellers at the prices noted below. At the close very fair purchases are being effected, but the demand seems to be almost exclusively for the Continent and America, and it looks as if English buyers were awaiting further reductions in order to operate, as they are, at present, to some extent holding aloof. The fall in prices for Hanks is about $40 to $50 per picul. Oshius have not undergone much change, and the demand for this description of Silk has been limited.

Settlements are 2,350 bales of Hanks, 450 bales of Oshius and 75 bales of Filatures, making a total of 2,875 bales. Arrivals amount to 5,350 bales and stocks are increased to 3,100 bales. The total export since 1st of July to date is 8,747 bales, against 15,358 bales for same period last year.

		In London at 4s. 0½d. per lb.	*In Lyons at f. 5.10 per kilo.*
Hanks,—Superior	$570 to 580	20/8 to 21/	57.00 to 58.00
,, Best No. 1 & 2	$550 to 560	19/11 to 20/3	55.00 to 56.00
,, Good No. 2	$520 to 540	18/11 to 19/7	53.00 to 54.00
,, Good all round No. 2½	$490 to 510	17/11 to 18/8	50.00 to 52 00
,, Medium No. 3	$470 to 480	17/3 to 17/7	48 00 to 49 00

,, Common to Medium	$130 to 440	15/11 to 16/3	44.00 to 45.00
Kakeda,—Extra	$600 to 620	21/8 to 22/3	60.00 to 62 00
,, Best	$560 to 580	20/3 to 21/	56.00 to 58.00
,, Good	$530 to 550	19/3 to 19/11	54.00 to 55.00
Filatures	$620 to 750	22/3 to 26/8	62 00 to 74 00

Silk-worm's Eggs.—Arrivals are about 1,600,000 cards and sales amount to 600,000 cards. Prices have gradually fallen, and close at 20 to 30 cents for good sorts. A large quantity of medium and inferior descriptions have been withdrawn from the market and will probably be destroyed, but notwithstanding this, there will still remain on hand half a million of cards for which no purchasers can be found, as it is expected that the last of the *graineurs* will have left by this opportunity and the next French mail.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Tea.—Business during the closing week has been fairly steady, settlements amounting to 2,500 piculs, while native holders seem more willing to meet buyers' views, especially in the better grades.

Supplies continue on a moderate scale, and stocks in Yokohama amount in all to some 6,000 piculs.

The *Cremona* had despatch for New York yesterday morning, leaving the *Willard Mudgett* to follow on the berth for the same destination.

Common	$10.00 to $11.00	Fine	$22 00 to $25.00
Good Common	$12.00 to $15.00	Finest	$27.00 to $32.00
Medium	$16.00 to $17.00	Choice	$34.00 nominal
Good Medium	$18.00 to $21.00	Choicest	—

EXCHANGE AND BULLION.

Exchange.—Sterling rates have fluctuated slightly throughout the week, closing rather easy at quotations.

Rates close as follows:—

W. & C. SCOTT & SON.

FIRST PRIZE MEDAL and DIPLOMA OF HONOUR awarded, CENTENNIAL EXHIBITION, Philadelphia, 1876. For excellence of Materials and Workmanship in their PREMIER QUALITY and medium grades. Their New PATENT TRIPLEX action and COMPENSATING LUMP.

The attention of Sportsmen is requested to the above new system of action. Its superior strength and solidity imparts greatly improved shooting powers. Hard hitting being the desideratum required is obtained by this powerful Gun.

Prices of the TRIPLEX: £22.10.0, £30.0.0, and £37.10.0. This latter is our highest quality and is marked "THE PREMIER QUALITY."

Excellent DOUBLE-GRIP BREECH-LOADERS at £8.10.0, £12.0.0, £16.0.0 and £20.0.0. Shooting guaranteed.

OUR PATENT TOP LEVER with PURDEY solid double bolt. Shooting guaranted. Sound plain finish £15/0/0. Well finished, good materials £21.0.0. Cases and implements £4, £6 and £8 extra.

In the New York International Gun Trial competition, 1873, the Committee awarded our guns the Diploma, being declared first for points of merit of action, materials, proportion and shooting qualities.

Extract from Forest and Stream, New York, December 26th, 1876. Contributed by one of the judges of awards of guns at the Centennial. "The crowning glory of the display was the case of W. & C. Scott & Son. This firm has sent more good guns to this country during the past few years than any other, and they especially commend themselves to American sportsmen from the fact that they furnish good guns, honestly made, and of high shooting powers at very moderate prices. Their TRIPLEX ACTION combines, in the highest degree, strength with simplicity, and it must rapidly secure the favor of all who test its merits."

OUR PATENT COMPENSATING LUMP strongly recommended; should be ordered on every gun (cost, 30 shillings extra). For the Sportsman abroad, this invention is invaluable, being secured against the joint becoming loose after several years wear.

CHOKE BORED GUNS.—Slight, Medium or Full.

BREECH LOADERS in all systems from lowest qualities.

SINGLE and DOUBLE MUZZLE LOADERS.

Makers of the NEW SWINBURN-HENRY Sporting Express and SWINBURN-HENRY RIFLES and Carbines taking Government Ammunition. This Rifle is a great improvement on the Martini.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded.* This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person bv whom they are sent.

Yokohama, 25th June, 1874.

BIRTH.

On the 5th instant, at No. 97, Bluff, the wife of EDWIN WHEELER, M.D., of a son.

DIED.

On the 5th instant, at the Convent of the Holy Infant Jesus, Yokohama, SISTER ST. DONATIEN, age 31 years.

Notes of the Week.

The British Minister, Sir Harry Parkes, and party have returned safely from their trip to the north, arriving in Tôkiô on Wednesday evening after a somewhat severe journey. From Hakodate a trip was made to Sapporo, the capital of Yesso, and H. M. S. *Modeste* with the party on board then proceeded to Niigata, remaining for eight days off that port, during the whole of which time it blew too hard to allow any communication to be made with the shore. During most of the bad weather the vessel took shelter at the island of Sado, trying two of the anchorages. When at last a landing was effected at Niigata, the return journey to Tôkiô, occupying eight days, was made overland.

A private telegram from Europe, dated Friday, the 9th instant, and received in Tôkiô to-day, states that the Turkish forces in Asia Minor have been defeated at Kars and Erzeroum and have fled to Trebizonde.

It cannot denied that the unfortunate quarrel among our racing men has had a dispiriting effect on the meeting of the Yokohama Race Club just concluded. More lovely weather could not be imagined than that we enjoyed during the three days the meeting occupied, so that on this score there was every inducement to pay a visit to the very pretty course the community possesses. But the public is rightly enough getting tired of this trumpery squabble, and if the racing men themselves will not resolutely set their faces against its further continuance, it were better that the public should refrain altogether from attending the race meetings, and so bring the obstinate few to their senses. Owing to this division there was a great falling off in the entries, but there was neverthless some good racing, and the result was not always the certainty which had been predicted. *Braemer* retains his laurels as an unbeaten pony, but it should be remembered that he never met *Bonny Doon*, a pony Mr. John Peel may well be proud of. It is true that *Hoolet*, on the third day in the Merchant's Cup, reversed the beating he received from *Bonny Doon* on the 1st day, but it was clear that through some error in management *Bonny Doon* went to the post on the third day in very unfit condition for racing, in addition to having to carry top weight. The greatest novelty, however, which this meeting presented, was the advent on the course of *Ichi Roku*, a pony raised at the Government breeding establishment at Nambu. The pony is a gelding aged 5 years and 4 months, his sire having been a pure Arab, one of those presented by the late Emperor Napoleon to the last Shôgun, and his dam a native Nambu pony. He shows points of vast improvement on the ordinary native breed, and promises well for the cross generally if care in selection of good dams can only be secured. But here the difficulty lies. It is well known that many of these half breeds exist in the country, which ought to be good ponies, but through want of judgment and care in selecting suitable dams, too many of them are weedy, useless animals, altogether unworthy of the time and trouble taken in rearing them. *Ichi Roku's* appearance and performances demonstrate how much judicious selection might do, and if this were exercised we might, in a few years,—that is supposing the present split in the racing community does not cause the sport to collapse entirely—see a good field of half breeds appear on the course. It becomes now a question for consideration whether such ponies should be allowed to compete on even terms with ordinary Japan ponies, and is one which the future committees of the Racing Club or Clubs will have to deal with. Apart from this novelty, the very excellent and unprecedented time in which the mile was run on the first day, will specially mark the 1877 Autumn Meeting of the Y. R. C, when *Bonny Doon* met *Hoolet*, contending for the Britannia Cup, and an extremely fast race ensued. The first quarter was done in 31 secs., the half mile in 63½ secs., the five furlongs in a 1 min., 19½ secs., the three quarters in 1 min., 37 secs., and the mile completed in the splendid time of 2 min., 10 secs. Good time was made in other events, among which we may particularize the Cathay Cup on the first day, when *Grey Friar* did the half mile in 61 seconds; the Visitors Cup on the second day for three-quarters of a mile, which *Bonny Doon* won in an easy canter in 1 min., 38 secs.; the Merchants' Cup on the third day for one mile and a quarter, when *Hoolet* carrying 11st. 4lbs., beat *Bonny Doon* carrying 11sts. 10lbs. in 2 min., 43½ seconds, and finally in the Sayonara Stakes on the same day, when *Braemer* carrying 11st. 9lbs. did the distance once round (slightly over a mile) in 2 min., 15 secs. All these show very good going, when it is taken into consideration that our course is a succession of hills and dales, and that for any race over three quarters of a mile one hill has to be breasted sufficiently steep to appal the stoutest pony. Of the riders Mr. Marlborough has again been most

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

fortunate, scoring no less than eleven wins out of twenty-four events, being followed by Mr. Osborn with six. Strange to say the handicapping gave general satisfaction, and the result of the races showed the judgment which had been exercised in fixing the weights.

The Amateur Athletic Association propose to hold their meeting at their Ground on the Rifle Range on Tuesday next, the 13th instant. The first race is set down for 12.30 p.m., and it has been arranged that the first heats of certain races and the more unimportant events will take place early in the afternoon, so that those who are unable to attend at the commencement will not be deprived of the principal interest of the meeting. The first heat of the Boy's Race is arranged for 1.15, so youngsters who intend to compete should take care to be punctual. We are glad to say that the entries are well filled, and can congratulate the Association on the prospect of a very successful and interesting meeting.

We unfortunate exiles in Yokohama—that is to say exiled from the world of music and art and all its satisfying delights—are somewhat in the position of the Princess who by means of a magic toy could tell what any one in the Kingdom was having for dinner, but if we recollect right did not partake of any of the dainty dishes which were revealed to her curiosity. She was doubtless, however, enabled if so inclined, to gratify her palate with the best of foods prepared by her royal father's French cook, and have many a cate and junket rare set before her whenever she had a mind to partake thereof. By the magic of the foreign press we too can see, whenever we wish, with what delicious art food the world at large is refreshing itself—for all good music and great art does refresh and sustain both mentally and physically. But here alas our position differs from that of the Princess in the fairy tale. We have no source whence we can derive the nourishment which our hearts are crying out for. Tantalus-like we are chained fast to a wearisome round of daily tasks and petty social duties, unable to touch or taste of the delights for which our souls crave. And after all what a healthy appetite it is which demands that our artsitic longings should to some extent be gratified. It is to the utter absence of this, to most people, necessary food of the soul that we can trace much of the gloom that afflicts at intervals all of us whose dwelling fate has fixed in the nethermost parts of the earth. If our minds had proper relaxation, how much of the despondency, the discontent, the weariness, the selfishness, which overhang our life like a black pall, would disappear, and we should be able to appreciate at their proper value the many comforts by which our life in the East is surrounded. Especially do we refer to the absence of music. The works of the poet and the scholar can be enjoyed here almost as well as in the great art centres, provided one has the patience to wait his turn at the library. Even what is being done in painting can to a certain extent be appreciated, for engravings and descriptions such as are contained in the various art journals do much to keep us familiarized with the works of the great men of the day. But of music no echo reaches us. To read of what is being done in the musical world, of the exquisite productions and the excellence of performance, is to sit at a Barmecide feast, and to know that the appetite must remain ungratified. If only these islands, like Caliban's isle, were "full of noises, "sounds and sweet airs that give delight and hurt not,"—one of the great wants which distresses most of us, would no longer exist. How keen is that want, is shown by the endeavour occasionally made by some of us to supply it, in however small a degree, by feeble amateur efforts, which take the weakest forms, all equally unsatisfactory, and which are certainly only tolerated on the same principle that sometimes in the country we eat Japanese food because we can get nothing else. When therefore we are unexpectedly provided with such an entertainment as that given by the members of the German Club on Tuesday last, we may be pardoned if we here refer to it, although it was of a strictly private nature, and in the name of those who were present express our gratitude both to those who provided it, and to certain of those whose rare artistic skill contributed so largely to its success. It is surely a great gift to have but to open the mouth or lift the hand in order to give the keenest and most refined pleasure to the listeners, and when these gifts are as graciously bestowed as on the occasion in question, it is hard to express gratitude without intruding on that privacy which it is the privilege of the givers to retain. Criticism would be entirely out of place on such an occasion, even were it called for. When artists condescend, amateur critics must be silent. But those who afforded such keen delight the other evening will not be displeased to learn that the generous display of their talents has afforded to many enjoyment to which they have long been strangers, and that perhaps some day we may be again emboldened to become petitioners for pleasures which we feel sure it is a pleasure to give.

We have received, just as we are going to press, a copy of the Third Annual Report of the Commissioner of the Imperial Mint at Osaka, for the year ending 30th of 6th month of 10th year of Meiji (30th June, 1877).

The amount of Gold of Standard fineness imported into the Mint during the year is	57,254	Ounces Troy.
The amount of Gold Bullion for same period	53,627	,, ,,
The amount of Silver of Standard fineness	4,734,130	,, ,,
The amount of Silver Bullion	4,385,652	,, ,,

The total number of coins struck is as follows.

	Number.	*Value.*
Gold Yen, various denominations	214,228.	1,066,714.00
Silver coins ,, ,,	29,185,676.	5,717,954.05
Copper ,, ,, ,,	85,136,117.	1,106,175.64
Total	114,536,021.	7,890,843.69

The largest yield of dollars in any one month was over 700,000

We call attention to a translation from the *Nichi Nichi Shimbun* on the subject of the production and export of Silkworms' Egg cards. While the writer seems to recognise the impropriety and undesirability from an economical point of view of Government interference in the business, he urges that it would be a good thing if the Government would assume entire control of the trade. We should think it has already had sufficient experience that speculation, even in Government hands, cannot be made with certainty profitable, but is subject to the laws of supply and demand, and also to those common sense laws which guide the business operations of humble merchants. A trading Government risks both loss of money and, what is of greater consequence, loss of dignity.

The latest advices from America state that there are hopeful signs that the dullness which has so long overshadowed trade in the United States is at length passing away, and that a revival of business may be confidently looked for. The prices realized by the farmers and planters for last year's productions were so good, and the promise of the crops for the present year is so bright, that money is commencing to circulate more freely, while the improved state of political feeling throughout the country is reestablishing confidence and promoting a more healthy business feeling. The Southern trade has so rapidly improved that the steamboat companies have had difficulty in meeting the demands for freight, a truly encouraging sign, when until recently it was impossible to find work for the vessels. Such activity has not been known since 1873. On the great railway lines there is marked increase of business, and the effects of a general revival of activity appear to be felt in all branches of trade. This is to a large extent fostered by the confidence felt in the administration of President Hayes. The country is no longer disturbed by political strife, and the present outlook seems to be more hopeful than for many years past. According to the grain reports in the San Francisco papers, the wheat crop in Europe is very greatly below the average. In some of the districts of England the harvest is the worst that has been known for years, there being a great number of farmers the yield of whose crops will not suffice to pay their rents. The French harvest is also considerably deficient, while the Russian harvest, which

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

at one time promised well, turns out very disappointing both in quantity and quality. These deficiences, aided by the war in Europe, must make an opportunity of which America will reap the advantage. It is not therefore without reason that merchants in the United States look forward to an improved condition of trade, and to a release from that dismal state of stagnation which has prevailed so long.

The *Hôchi Shimbun* contains a report to the effect that the Government has given permission to the farmers to pay their taxes in kind, calculating the average price of rice for the past six months. We trust that this report is founded on fact and that it is the intention of the Government to amend one of the most rash of its measures, and thus redress a popular grievance which should never have existed.

From one of the San Francisco papers we learn that the German corvette *Elizabeth* has been ordered to Nicaragua, to support a claim for satisfaction on behalf of German subjects who were recently maltreated there.

The Pioneer Savings Bank of San Francisco has failed, and its manager J. C. Duncan and his son-in-law have fled to parts unknown. It is said that investigations disclose forgeries on the part of the management to the extent of $800,000. The number of depositors is over two thousand and their loss amounts to a million dollars. No trace of the rogues has been discovered. Other cities, also, have had a recent experience of fraudulent banking, and much suffering is caused by the failures of several institutions conducted on a similar plan to the Pioneer Savings Bank.

A letter from a valued correspondent appears to-day, in our columns on the subject of Professor Morse's discovery of a pre-adamic shell-heap at Omori, in which the writer complains that the paper is not made public with the rest of the Asiatic Society's proceedings. We must inform our correspondent that the lecture was not written out by Professor Morse, owing to want of time, but was delivered from notes only. Professor Morse intends writing it out in full on his voyage to San Francisco when it will take its place with the rest of the Asiatic Society's papers. We are not in a position to enter into a discussion of the value of this discovery, but have no doubt Professor Morse has ample evidence to bear out his assertions as to the antiquity of the remains. At the same time we cannot refain from remarking that a few days since in a cutting on the Zenkojikaido, a deposit of shells at some distance from the surface was observed by a foreign tourist, which had a remarkable resemblance to an old "Kitchen midden," but which from the depth below the surface must have been formed many ages ago.

From the *Mainichi Shimbun* we take the following particulars of the confession of Ikebe Kichijuro, who was the Commander-in-chief of the *samurai* of Higo during the late war in the south. It will be seen that the fatal delay before Kumamoto was to a great extent caused by the distrust felt by the Higo men for the Satsuma people, who have hitherto always used the former as a catspaw in any undertaking in which they have joined issue. It is indeed strange that Higo should have been induced in the present instance to join Satsuma in view of the many occasions on which they have been duped, and the consequent strong feeling of enmity that existed between the clans. The hatred of the present Government seems, however, to have been stronger than the feeling against the rival clan. At the same time the jealousies and want of concerted action between the leaders have evidently had much to do with the failure of the Southern cause.

I was brooding over the condition of Japan. The Government had, after the restoration, abolished the customs of the past, and adopted other and better in their place, and I had cherished the hope that the power of the Empire would shine throughout the world. Contrary to my expectation, however, the nation seemed to forget the meaning of shame or disgrace, and day by day corruption increased. This state of things at last became unendurable. The four classes were brought to misery and the people in their reckless adoption of foreign ideas clamoured for people's rights or for a republican form of Government, and the evils thus committed have became innumerable. The spirit of piety and obedience to parents and masters, taught by the Gods who founded our Empire has died. The foreign barbarians, though they may commit crimes in our country cannot be punished by its laws. In consequence of this they treat us with contempt, and this I will now prove.

There is the Saghalien question. The Kuriles have ever been admitted to be a portion of this Empire. The Government says that one has been exchanged for the other, but it is no such thing. The foreigners have taken Saghalien from us. All this arises from mismanagement of the administration, and should such a condition of things be permitted to continue, the Imperial dynasty which has lasted for ten thousand years, unparallelled in the world, would be endangered. We are being subjected to dishonour such as has never before fallen upon us, and yet we are powerless to prevent it.

All this has caused me the greatest anxiety, and I at one time made out the draft of a memorial. But when I remembered how the Government had rejected the petition of such a man as Shimadzu (Saburo) Hisamitsu, it seemed that a man like myself might memorialize a hundred thousand times, and never meet with any attention. I therefore decided that it would be useless to present my petition. I was of opinion that all this misgovernment was the fault of two or three individuals who used their influence to render void the wisdom of the Emperor, and believed that the only way in which a change could be wrought and the virtues of the Emperor made known was by destroying such officials. About the middle of February last a plot, laid by the Government to assassinate Saigo Takamori, Kirino Toshiaki, and Shinohara Kunitoshi being discovered, Saigo and others at the head of a large force endeavoured to make their way to the capital to inquire into the cause of the Government acting in this manner. I believed that this plot was orignated by certain evil officials and decided that they must be destroyed, and this I fully believed would be successfully accomplished by Saigo. But I considered that should I remain inactive, I should be unable to say a word in protest should he act in a reckless and despotic manner after having attained his object. I was not aware of the entire intentions of Saigo, but as we agreed in our opinions as far as the destruction of the officials was concerned, I united my forces with his in order that my object might be attained of acting as a check on Saigo in case his success might lead him to adopt any arbitrary measures. In any case it afforded me an opportunity to rise and endeavour to achieve my long cherished aims.

On the 14th of February I went to Kumamoto, where I met my friends Matsu-ura Shinkichirô, Yamazaki Johei and Sakurada Sôshirô, and we held frequent consultations. For a time we could arrive at no satisfactory decision, fearing that Saigo might become despotic if successful, or that the plot to assassinate him was not sufficient to justify our having recourse to arms. After a lapse of two or three days we decided to join Saigo, and by this time a portion of the Satsuma forces had arrived at Ogawa, under the command of Beppu Shinsuke. On the 19th of the same month, I went alone to Ogawa and had an interview with him. In reply to my enquiry as to what preparations he had made for attacking Kumamoto he stated that he had come out only with the intention of advancing to the capital, and that should the garrison interfere, he should merely thrust them aside and continue his advance, as he was not prepared to carry on active warfare. By the time, however, that I arrived at Kumamoto on the 20th, that city had been destroyed by fire, and I heard that young *samurai*, in bands of sixty or seventy had assembled at Takanomiya and other places. Thither therefore I went, and ordered Matsu-ura Shinkishiro to have all these men ready. On the 21st instant the Satsuma troops decided to attack the castle of Kumamoto, and Beppu Shinsuke requested us to furnish him with guides. I accordingly sent Ikeda Kagashi and five others whom I selected. As, however, hitherto the Satsuma men had nearly always played false to the Kumamoto men, the *samurai* of Higo were fearful lest they might again be tricked on this occasion. That very night I went to Kawajiri, and had an interview with Shinowara Kunitoshi to examine into the condition of the Satsuma forces. It was then, after consultation, determined to make an attack upon the garrison of Kumamoto, and on the 22nd it was decided that Shinowara should command the troops in person, and make the attack from the Danyama. On the 23rd I returned to Kiomachi, Akaoguchi, where Matsu-ura was waiting for me with seven hundred

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

men, and on the 24th I had an interview with Saigo. He told me that he had heard that the *Jimpu* party would attack the garrison that night with swords, that he was to follow up the attack with his force and it was thought the castle would be taken. I remarked that all the leading members of the *Jimpu* party had perished in the rising of last winter, and that as those who remained were mostly cowards, their story of intending to attack the castle that night was probably untrue. If the attack were therefore to be made, it would be advisable that the Satsuma troops should make it at once, without relying upon the *Jimpu* party. I also remarked that an attack by day would be more advisable, as a night attack would probably cause disastrous losses to the attacking party. Saigo asked me various questions as to the geographical nature of the surrounding country, and I gave him the fullest information. He then decided to give up the idea of a night attack and to defer the attempt until he had obtained further knowledge of the nature of the fortress. I then took my leave.

By this time Kitamura Moridzumi, Sasa Tomofusa and others with their men had started for Takase, and on the 25th I received important news from them which induced me to set out at once with a body of men for Kodome. We fought desperately at Terada, Tateyama and other places, during which engagements I was wounded by a bullet. I gave my command to Matsu-ura, and went to the hospital at Nihongi. During the time I was in hospital I directed by order the transportation of arms and ammunition. In the meanwhile our troops were fighting with the greatest valour day after day at Tawara, Kichiji and other places. It was at this time that many lawless ruffians went about extorting money, etc., from the people. To put a stop to this I formed a band called Chinbutai.

The Imperialists now advanced from Yashiro and our troops were thus attacked both in the front and rear, which made defence difficult. A Higo *samurai* named Yuge Arata came to me, and advised me to dam up the waters of the Tsumigawa at Ishitsu and thus be enabled to send the troops who were beseiging the castle against the enemy, who was attacking from both north and south. I consulted with Kirino and he agreed to the plan. We were thus enabled to bring all our forces against our assailants, but being defeated at Kawajiri our troops were compelled to retreat to Kodome and the neighbourhood. I had by this time recovered sufficiently to be able to resume my command. We went to Mifune where we were again defeated and were compelled to retire to Yabe. The Kumamoto forces were divided into five regiments commanded by Sasa Tomofusa, Kitamura Moridzumi, Iwama Kojuro, Fukanô Ichizô, and Makishiba Kenjurô, I myself being Commander-in-Chief. We now advanced to Hitoyoshi. One regiment was sent toward Itsuki, and the remaining four to Mitsumata and for fifty days hard fighting continued. We were, however, finally overpowered, and had to fall back toward Oguchi. We retreated fighting through Honjô, Okubo, and Osakabe-yama, to Miyazaki. By this time our forces were terribly weakened and we lost battle after battle. I fell ill but still endeavoured to encourage the men, and to protect the troops at Yasuketagawa. The Satsuma forces who were stationed higher up the river had been defeated, and as my rear was threatened, I sent troops to protect myself against an attack. Just, however, as I was about to despatch another body, I was myself attacked by the Imperialists. Beingill and unable to move rapidly, I was compelled to hide myself in a bamboo grove, in the hope that by night I might be able to rejoin my men. The enemy, however, covered the ground and finding that I could in no way make my escape, I made my way to a farmer's house and there hid myself. Hearing afterwards that some of our troops were at Yonera on their way to Nobeoka I went over to join them, but when I arrived there, I found that they had fled elsewhere, and I could discover no trace of them. I therefore went and concealed myself at Sadowara. Here I heard a report that Saigo and others had made their way into Kagoshima, but on going there I found the environs of the city so closely guarded by the Imperialists that I was unable to effect an entry. I therefore lay hid, waiting for an opportunity, when I heard that Saigo and other commanders had died on the 24th of September, and that the remainder had surrendered. In a state of utter despair I had determined to commit *seppuku*, when I heard that Saigo had succeeded in making his escape. In such a case, I thought, we may make another attempt, and I lay concealed in different places, until I was captured on the 16th instant. I have on examination confessed all I know. The above is nothing but the truth.

24th October, 1877.

From the "Japan Mail Daily Advertiser."

Monday, 5th.

The Agent of the Great Northern Telegraph Company reports that the Shanghai Cable is in working order.

We take from the *Osaka Nippô* the following table giving the number of the troops of the 2nd Division of the Imperial Army, Commanded by Lieut. General Miyoshi, who were either killed or wounded from the commencement of the war up to the 24th of April, when these troops succeeded in relieving the Kumamoto garrison. This 2nd Division consisted of the Imperial Guards and the troops of various garrisons, as will be seen by the table. The tables are now published to show the extent to which the Imperialists suffered in the endeavour to restore the peace which Japan now enjoys.

It may be well to add that the *rentai* is what we call a battalion, and consists of either two or three regiments (*Daitai*) the strength of each of which is 640 men. This again is divided into *chintai*, or detachments of 160 men, or one fourth of a regiment, and *Shôtai* companies of 80 men or one eigth of a regiment.

		Officers.	Non-Com. Officers.	Men.	Total.
1st Regiment of the 1st Battalion of Imperial guard	Died	12	18	92	122
	Wounded	16	62	341	109
2nd Regiment of the same	Died	9	22	110	141

Total killed and wounded 2,763

In honour of the birthday of the Emperor, Saturday was observed as a general holiday. At noon the usual salutes were fired from the men-of-war in harbour and from the forts at Kanagawa. In the afternoon, commencing at half past three, a display of day fireworks was given in the public gardens which called together a large crowd of natives and foreigners. It is we believe the first time that an exhibition of these pyrotechnic curiosities has been given in Yokohama on so extensive a scale.

To most foreigners therefore, and to our surprise to many of the Japanese the display was entirely novel. The effect of these cleverly constructed day rockets was in many instances very pleasing. They are fired to a considerable height by a heavy charge of powder from strongly hooped bamboo chambers, and on bursting display amid clouds of coloured smoke various quaint devices made of paper. Among the best were a cock and hen, a dragon pursuing a red ball, very cleverly managed, and a bouquet of crysanthemums in different coloured smokes. The weather was fortunately perfectly clear and calm, and thus the various devices were shown off to the best advantage. We do not know if these fireworks have ever been seen in England, and should think that they would afford a very attractive novelty. Their cost is however exceedingly high, if our questions on that point were correctly answered. In the evening a display of fireworks was given in

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

the same place, both exhibitions being provided gratuitously by the clever maker himself, Mr. Hirayama Jinta. Although some of the rockets were very beautiful there was little variety, and the night display could not compare in interest with that given in the afternoon. The Japanese men-of-war were hung with coloured lanterns and sent up occasional flights of rockets. The Machigaisho was illuminated in the usual manner, and festivities seemed general throughout the native town where each house was decorated with one or more lanterns bearing the national colours.

In our issue of Friday last we erroneously stated that one death had occurred from cholera in other localities of the Kanagawa *Ken* than Yokohama, when the correct number of deaths should have been three. We are happy to state that there is every evidence that the epidemic has been conquered at last, as the death rate is now extremely small, and during the 24 hours from the 31st October to 1st November only three new cases were reported in Yokohama and seven in other departments of the *ken*. We append a table of the course of the disease up to the 1st November:—

Total number of Cases of seizure.....		1,101
„	Deaths.....	599
„	Recoveries.....	401
„	Cases still under treatment	101
		1,101

Tuesday, 6th.

The *Courier* reports: Left Hakodate November 3rd, had fresh North-westerly winds throughout the passage. Passed the German barque *Christine* off Inaboyé, bound north.

The M. M. Co.'s steamer *Volga*, with the European mails to the 22nd September, left Hongkong on the 3rd instant at 4 p. m.

The great festival at Kudan, Tôkiô, in honour of those who fell during the late war, will commence on the 13th instant and last three days. As we before stated, there will be fireworks, horse racing and wrestling, and both the Naval and Military bands will play selections. A special place will be set apart for the relatives of those who fell in the Imperial cause, and the ceremony will be under the management of Prince Arisugawa-no-Miya. Both their Majesties the Emperor and Empress will be present during one of the three days.

The *Chôya Shimbun* states that on the 2nd instant His Majesty the Mikado conferred on Prince Arisugawa Taruhito, Commander-in-Chief of the Army and President of the *Genrô-In*, the honour of a decoration of the first class, in acknowledgement of the services rendered by him during the late civil war. At the presentation the Emperor addressed the Prince in the following terms:—"I, who by the will of Heaven am Emperor of Japan, descending in one unbroken line for ten thousand years, confer on you, Prince Arisugawa, a man of the highest merit, Commander-in-Chief of the Army and President of the *Genrô-In*, this decoration of the highest class of the order of the Chrysanthemum, and you are herewith invested with all the dignities and privileges appertaining to the said order."

The decoration of the first class of the Rising Sun was also conferred upon General Yamagata Aritomo, *Sangi* and Minister of War; General Kuroda Kiyotaka, *Sangi* and Minister of Colonization Department; Admiral Kawamura Sumiyoshi, Vice-Minister of the Navy; Their Excellencies Okubo Toshimichi, *Sangi* and Minister of the Home Department, Okuma Shigenobu, *Sangi* and Minister of Finance, Ogi Takato, *Sangi* and Minister of Justice, Terashima Munenori, *Sangi* and Minister of Foreign Affairs, and Itô Hirobumi, *Sangi*, Minister of Public Works and President of Bureaus of Legislation and Decorations. Special addresses accompanied the bestowal of the orders.

From the *Nichi Nichi Shimbun*.

On the 31st of the last month three rebels were sentenced to decapitation at the Special Court at Nagasaki, and twenty eight to hard labour for periods varying from one to five years.

From the *Hôchi Shimbun*.

The Governor of Kumamoto *Ken* has telegraphed to Tôkiô that Machida Keijiro, the son of the ex-*Daimio* of Sadowara, has not yet been captured in Kumamoto *Ken*.

H. M. the Emperor will visit H. I. H. Arisugawa-no-Miya on the 6th instant.

From the *Chôya Shimbun*.

On the 3rd instant H. M. the Mikado reviewed the troops at the drill grounds at Hibiya, Tôkiô.

From the *Akébono Shimbun*.

Early in December the *Tsukuba Kan* will go on a cruise to Austria.

The theatres, lecture houses and the like which were closed at Kiôto on account of the prevalence of cholera, have been reopened since the 3rd instant.

Wednesday, 7th.

From the *Nichi Nichi Shimbun*.

Upwards of 18,399 rebels surrendered themselves to the branch office of the Kiushiu Special Court which was established at Miyasaki in Hiuga.

For the future Sundays will be observed as days of rest by H. M. the Empress, instead the days of *ichi-roku* as heretofore.

At 10 a.m. on the 6th instant another balloon ascent will be made at the Naval drill grounds, Tsukiji, in the presence of His Majesty the Mikado.

From the *Chôya Shimbun*.

The Kiushiu Special Court at Nagasaki having been removed to Kiôto, was opened for business there on the 31st instant.

As we stated a few days ago, the amount expended by the Government upon the Kiushiu rebellion up to the 27th of last month was 44,638,098 *yen*, but from that time to the end of this month a further expenditure of over 6,300,000 *yen*, it is estimated, will have been incurred.

Of the 13th and 14th battalion of the Kumamoto garrison troops 69 officers, 133 non-commissioned officers, 542 men and 3 coolies died, from the commencement to the end of the war.

From the *Akébono Shimbun*.

Some thirty different persons have lately requested permission to enter into newspaper enterprise in various parts of the country, but this has not yet been granted. Public rumour say that this delay in granting permission must be on account of the reform which is about to be made in the Press-laws.

The Government has notified, that as there are persons who maliciously spread false rumours concerning the cholera hospitals, saying that to enter one of them is certain death, etc., and thus induce the people to needlessly fear such establishments, any person detected in such an offence will be arrested and punished.

The Department of Home Affairs has ordered drawings of various plants indigenous to Japan to be made and sent to the French Exhibition next year, for which purpose three hundred specimens have already been purchased.

From the *Mainichi Shimbun*.

At 5 a.m. on the 4th instant a fire broke out at the barracks of the Tôkiô garrison troops, Gofuku-bashi, by which four of the buildings were destroyed.

It is rumoured that the Government has granted permission to foreigners to reside in the following parts of Tôkiô, other than the Concession at Tsukiji:—Shitomi-chô, Otomi-chô, Irifuni-chô, Odawara-chô, Hatchô-bori, and Kobiki-chô.

Thursday, 8th.

Late last night the agent of the Great Northern Telegraph Company was in receipt of intelligence that the cable between Singapore and Penang had been repaired.

From the *Chôya Shimbun*.

The barracks for the Kagoshima garrison are to be built at the foot of Shiroyama.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

A school has been opened at Kajiki in Kagoshima *Ken*, where the authorities have notified that children of all classes and both sexes can obtain instruction, so urge parents to send their children there.

The *Bukaku Maru* left Higo a few days ago, but having met with bad weather, landed some of the wounded troops she had on board at Mogi-ura, and then proceeded on to Nagasaki. On her way to that port some of the powder she had on board accidently exploded and wounded a few of the crew, but it appears that no damage was done to the ship itself.

As cholera is gradually decreasing in Osaka, it has been decided to very soon destroy by fire the special hospital built for cholera patients.

From the *Nichi Nichi Shimbun.*

Mr. Verbeck, whose term of agreement with the *Genrô-In* terminated not long ago, has been employed by the *Gakushu-In* (the *Kuazoku* School) and his services will also be partly devoted to the *Daijôkuan*, at a salary of 250 *yen* per month from each establishment.

From the *Akébono Shimbun.*

H. I. H. Fushimi-no-Miya has been appointed to represent H. M. the Mikado at the grand review of the troops at Narashino-hara, and will leave Tôkiô for that purpose on the 8th instant.

One regiment of the troops of the Hiroshima garrison who were stationed at Marugame have been sent to Kôchi.

On the 5th instant the sum of 20,000 *yen* was sent to the Nagasaki *Kencho* to cover the extraordinary expenditure that has been lately incurred there.

From the *Hôchi Shimbun.*

The *Nisshin Kan* will shortly be despatched to Kagoshima.

From the *Mainichi Shimbun.*

The *Hiogo Maru*, which arrived in port on the 5th instant, brought 240 troops from the South and also 166 wounded from the Osaka Hospital, all of whom were landed at Benten Bashi, near the Railway Station. Among the latter was Yasumura, who very nearly captured Saigo alive, and who, it seems, is suffering from the wound that he received on that occasion.

Friday, 9th.

A slight shock of earthquake occurred at 11 o'clock last night.

From the *Hôchi Shimbun.*

It is reported that any person who shall for the future become bankrupt, will be deprived of the privilege hitherto allowed of being able to accept a post under Government or as the custodian of a Shintô Shrine.

From the *Chôya Shimbun.*

When the present National Exhibition closes, it is rumoured that another exhibition, to be called the Tôkiô Hakurankai, will be opened at Tatsunokuchi.

From the *Akébono Shimbun.*

Their Excellencies Itô and Yamagata, General Saigo and Admiral Kawamura held a meeting at the Bureau of Decorations on the 7th inst., probably for the purpose of consulting about the distribution of decorations to those in the Army and Navy who served in the southern war.

There are now 555 butchers' shops in Tôkiô, which shows that more than 150 have been established since this time last year.

From the *Nichi Nichi Shimbun.*

Postal cards of the denomination 3, 5, and 6 *sen* are to be, issued shortly for mails to foreign countries.

Two balloon ascents took place at the Naval College, Tôkiô on the 7th instant, in the presence of His Majesty the Mikado. The balloon which was inflated with hydrogen gas proved a success, while the other, for which coal gas was used, burst after rising a short distance.

Artizans are now hard at work building elegant carriages, which are to be presented by the Department of the Imperial Household to the various princes of the Imperial blood.

From the *Mainichi Shimbun.*

The *Sumida Maru* arrived in port on the 7th instant, with over five hundred rebels who have been sentenced to hard labour.

From the *Osaka Nippô.*

The following table shows the result of the trials before the Special Kiushiu Court, from its establishment at Nagasaki until the 31st of last month, of those who were accused of complicity in the late rebellion.

To Decapitation	20
To 10 years hard labour.....	28
„ 7 „ „ „	10
„ 5 „ „ „	86
„ 3 „ „ „	248
„ 2 „ „ „	946
„ 1 „ „ „	353
„ 100 days „ „	118

Saturday, 10th.

The Agent of the Great Northern Telegraph Co. informs us that the Australian line is out of order, the cable between Banjoewang and Port Darwin being interrupted.

The P. & O. steamer *Malacca*, with English mails on board to the 28th September, left Hongkong at 11 a.m. on the 8th instant.

The *Akébono Shimbun* says that the balloon which was sent up at Tôkiô on the 7th instant, fell to the ground in Oshin, so it must have traversed a distance of about 150 miles in a northerly direction.

From the *Akébono Shimbun.*

Shimadzu Saburo left Nagasaki on the 24th of last month for the capital, so his arrival may soon be looked for.

From the *Chôya Shimbun.*

The Governor of Kagoshima *Ken* has advised the Government that it is desirable to prevent the *Shizoku* of his *Ken* travelling about the country, without first obtaining special permission.

The Chinese Government is now purchasing timber in Japan wherewith to built a fine temple to be dedicated to the memory of the late Emperor.

From the *Hôchi Shimbun.*

The Army Department is about to erect a building covering 2,000 *tsubo*, to serve as a manufactory for Snider rifles.

From the *Nichi Nichi Shimbun.*

The principal officers of the Army and Navy and the officials of high rank of various civil departments, in all numbering one hundred and twenty five, will be entertained at a state banquet at the Imperial Palace at 5 p.m. on the 10th instant.

If having been decided that one of the men-of-war building in England shall be named the *Fusô*, the name of the Mitsu Bishi Company's steamer *Fusô Maru* has therefore been changed to the *Tayono-ura Maru.*

The bodies of those military officers which were burried at Uyéke, Tawara, Miyasaki, Hitoyoshi and other places, are to be removed and interred either at Kumamoto or Kagoshima, at which places shrines (*Sho-ken-sha*) will be erected to their memory.

The steamer which arrived at Yokohama on the 8th instant brought 447 rebel prisoners from the south, who were in charge of two police officers, fifty-three constables, and were attended by forty coolies. The prisoners were placed in the jail at Tsukuda-jima, Tôkiô, pending their departure to Fukushima, Yamagata, Akita, Iwate and Awamori *Kens.*

THE FINANCES OF JAPAN.*

(Concluded.)

WE have now to review that portion of Mr. MOUNSEY's Report which deals with the expenditure side of the Japanese Budget. Here probably we stand on firmer ground than when considering the revenue estimates; for the expenditure having to be provided for in advance, the several details of it are, in all likelihood, well ascertained beforehand, so that the items given in the statements furnished by Mr. MOUNSEY are almost certainly close approximations to the truth. Taking, as on the former occasion, the financial year 1876-7 as the epoch comprised in our remarks, we find that the gross expenditure is some $2,000 under the gross receipts, showing an almost ideally perfect condition of the finances. But whether to this perfection on paper there corresponds a perfection in reality depends upon the degree of accuracy with which the income of the nation has been estimated, and we have no means whatever of arriving at any useful opinion on the last mentioned and all-important point.

The principal item in the expenditure is the large one of 17½ millions for pensions and allowances to nobles and *samurai*. A good deal of rather ill-natured and certainly unjust comment is from time to time called forth by this item in the native papers. It seems to be forgotten that the position of the nobles and *samurai* at the time of the Restoration was the natural outcome of the history of Japan, from which they could not, with fairness, be deposed without proper compensation, and it may very well be doubted whether the sum of 17½ millions is anything like an equivalent in money for what they have lost by the sweeping changes that the last decade has seen. Some very interesting details we shall collect from Mr. MOUNSEY's remarks upon the item we are now discussing. In 1872 there seem to have been 459 members of the nobility (heads of families we suppose are meant) 201 of whom were *kuge* or Court nobles, said to be of imperial descent, and 258 were *daimios* or territorial barons, most of whom obtained their lands as the reward of military services rendered to the Eastern Court during the period of its ascendency. In 1876 the number of *samurai* families entitled to pensions was over three hundred thousand, of whom over a hundred and twenty thousand received a pittance of under 25 *yen* per annum, and more than a hundred and seventy thousand an annuity of under 100 *yen*. Not more than some fifteen thousand were entitled to 100 *yen* a year or more, and only about five hundred to more than 1,000 *yen* annually.

We are inclined to doubt the statement that the *samurai* were originally peasant farmers cultivating their own lands. The class probably first came into existence about the time that the dominions of the Mikado were being extended by conquest of the eastern and southern portions of Japan. Successful military leaders became governors and finally lords of the newly added lands, and divided their territories among their faithful followers. Hence came into existence a class of land-holding retainers, bound by a sort of feudal tie to their superiors, which under the Shôguns developed into the specially privileged order of the *samurai*, who now recognise the suicidal nature of the revolution they themselves effected in 1868—70. It is, however, certain that many peasants now cultivating their own lands are descendants of *samurai* to whom these lands were granted centuries ago. Numerous instances of the truth of this assertion are to be found about Yokohama, and especially in the neighbourhood of Kamakura, where historic names are still borne by tillers of historic sites.

Arrangements have been made by which this item is expected to be reduced in the current financial year by nearly a fourth, that is by the sum of 4 millions. The sufferers by this reduction must of course be the pensioners themselves, and it may be doubted whether any absolute necessity exists to justify what looks very much like a confiscation. The Satsuma insurgents, too, having forfeited their allowances, the revenue will be thus still further relieved, though, of course, against this must be set the cost of the war in the south now fortunately ended, never again, we trust, to be repeated. The war, however, has not rendered a foreign loan necessary, though it has greatly increased the issue of paper money,—a measure of which the results can hardly be estimated at the present moment.

Among the remaining items of expenditure we may notice especially the large sum required by the Public Works Department,—nearly five millions of *yen*. We cannot but think that this is greatly in excess of what it is prudent for the country to expend upon Railways, Telegraphs, Engineering Colleges, and the like. These are all excellent things in their way, but what Japan chiefly wants, for the next quarter of a century at least, is good roads and plenty of them, and improved harbour accommodation. The Railways and Telegraphs in operation do not and cannot for a long time to come be expected to pay, chiefly from the want of almost all but interterminal traffic. The Railway passenger receipts between Yokohama and Tôkiô, indeed, if we remember rightly, have shown a constant decrease in amount, though a slight one, ever since the year the Railway was opened.

The cost of the Army is 7¼ millions, that of the Navy 3½ millions. A full and interesting statement of the actual military and naval resources of Japan is given by Mr. MOUNSEY, to which we must refer our readers, contenting ourselves with the remark that the true policy of this country is to avoid all rivalry with the huge armaments of western nations, and to aim rather at keeping up a small but efficient navy than at maintaining a large standing land-force. Japan, indeed, is so happily situated geographically, and so happily circumstanced politically, that she has nothing to fear from without, unless it be the gravitation southwards of the Russian empire, to meet which she would have to rely upon her naval rather than upon her military resources.

The very considerable provision made for public instruction is a most honourable feature of the budget, and if the appropriation under this head of 1¾ millions nearly, is properly distributed, not a cent of it will, in the long run, be without ample return.

That terrible incubus of modern statesmanship, a national debt, Japan has not been able wholly to escape, but the burden is at present of modest and manageable proportions, and there is no reason other than the possible unwisdom of her future rulers why it should not remain so. Mr. MOUNSEY's elaborate treatment of this part of his subject is in the highest degree instructive, and merits a much more

* Report on the Finances of Japan by A. H. Mounsey, Esq., Secretary to H. B. M.'s Legation at Yedo.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

careful analysis than we have space or leisure at our command to make. On the 1st July, 1876, the total of the debt amounted to close upon 149 millions (nearly 30 millions sterling—more exactly £29,784,944). Of this only a little over 14 millions are owing to foreign countries, and of this latter amount more than 11 millions bear 7 per cent., the remainder 9 per cent. interest. The mass of the internal debt is nearly 135 millions (£26,953,920), of which 94 millions represent the paper money in circulation on the above mentioned date. The total amount of paper issued since the Restoration is 97 millions, showing that some 3 millions have been withdrawn or converted. But of this 97 millions, 49 millions represent the paper of the *ancien régime*, the liability for which was taken over by the new Government, and the MIKADO's Government since 1868 have issued for their own needs 48 millions only. The whole of this paper is inconvertible, but until quite lately, when a new issue took place, it was on a par with specie, showing the confidence felt in the Government by at least the trading classes, and showing too, to the infinite honour of the Cabinet, how great was the temptation it withstood, until quite lately and under exceptional pressure, to increase the issue. All issue of inconvertible paper is of course equivalent to a forced loan, and the country must at least lose the interest on, if not part of the principal of, the amount in circulation. The expedient is confessedly a dangerous one, but the remote results of it are not well understood by economists, among whom great diversity of opinion seems to exist on the subject. Nor has the comparison of the effects of a resort to it with the consequences of a foreign loan, led to any decisive settlement of the question as to whether it is a cheaper or a costlier mode of relief than a foreign loan would be. One thing is certain, it drives coin out of the country as it has done in Japan, whose minting operations must have thus involved a heavy loss to the Government, which they must sooner or later directly or indirectly recoup by taxation from the people. The greatest objection, however, to its use, is the uncertainty it introduces into the currency, and the consequent restriction of internal trade, owing to the difficulty the merchant must experience in making his calculations, in that it forces him to allow a margin for possible differences of currency-value, which in the case of a metal currency he would not have to take into consideration at all, and thus necessitates a contraction of his operations.

It must be admitted that, if the above figures are not far from representing the truth, the finances of this country are in a thoroughly healthy condition. A momentous revolution has taken place, and an entirely different system of government with a completely new policy, interior and exterior, has been inaugurated and at last settled, so far as we can judge, upon a firm and durable basis, at a cost of some 48 millions only. In no country has so great a change in its polity ever been wrought at so small an expense, and there must have been wise heads and patriotic hearts directing the movement of 1868 to permit of so thorough and inexpensive a success having been achieved. Nor does the financial future show a cloud. The cost of putting down the late rebellion has probably been much exaggerated, and will to a greater or less extent be met by the confiscation of the insurgent pensions, though such a punishment must be awarded with discretion. The taxes, though undoubtedly heavy, seem to be borne with tolerable equanimity, and there do not appear to exist any grounds for fearing a diminution of the Revenue.

The expenditure, on the other hand, might with advantage be much curtailed. The military and naval estimates are certainly beyond the real needs of the country, which simply require a force sufficient to preserve internal order and maintain the police of the adjacent seas. Much of the money spent by the Colonization Department might be saved. The silk and other industries carried on by the Government can be abandoned to private enterprise to the advantage of all concerned. We should think the Legations and Consulates might safely be reduced in number, an envoy in London and Paris, another in Washington, and perhaps one at Peking, could amply protect the interests of Japan abroad. A large proportion, probably, of the officials in the various departments might be dismissed, but it is possible that political exigencies stand for the present in the way of retrenchment in this direction. A common complaint is that too small a proportion of the money collected in the provinces is spent in supplying their needs. This complaint probably is not unfounded, for we find that while the administration of the three *Fu* costs nearly half a million, the administration of thirty-five provinces costs only three millions and three quarters. The Tôkiô police is put down at $1,195,000, while that of the whole of the rest of the Empire is estimated at three-quarters of a million.

We have purposely refrained from touching on the question of the tariff and the desired increase in the import duties. So important a subject cannot be justly treated at the end of an article, but we may state all that we are concerned to state for the moment, that it is most unlikely that any increase in the tariff will increase the amount of the customs receipts—especially in the present unremunerative condition of the import trade.

Finally we congratulate Mr. MOUNSEY on the termination of his arduous and tedious task, in completing which he has rendered a signal service to all interested in the present and future of Japan, and especially to those in whose hands its destinies are placed. We have only one error to note, the indication of which will at once satisfy our critical spirit and show what care must have been bestowed upon the preparation of a report, where such an error is the only one which we can point out. *Oplysmenus frumentaceus*, better known as *Panicum frumentaceum*, is not a bean, but a grass, not, we think, much cultivated in Japan, though the grains are used as food in many parts of Asia. The bean so commonly used as food in Japan is the seed of a species of *Phaseolus (P. radiatus)* of which several varieties are cultivated.

THE AGRICULTURAL COLLEGE AT SAPPORO.

WE have been favoured with the First Annual Report issued by the Agricultural College at Sapporo, in the Island of Yesso, which was formally opened by His Excellency KURODA KIYOTAKA, Minister of the Colonial Department, in August of last year. This establishment is a branch of the Kaitakushi, or a training school in which students may receive the instruction which shall fit them to become officers of a department, which with the best intentions, has so far shown but small results from a magnificent outlay.

As has often before been pointed out in these columns, the comparative failure of the scheme of the colonization, and development of the agricultural industries of the Northern island, has resulted entirely from the unwillingness of sanguine minds to believe that the slow and patient laying of a solid foundation was necessary to success. With the same fatal haste which has unfortunately characterized so many of the experiments of the Japanese Government, enormous sums were devoted to the construction of roads and buildings which are rapidly going to ruin for want of use and repair, and to the purchase of implements and material which must rot long before they can be turned to any account. It was fondly imagined that large bodies of colonists could be transported to the thinly peopled island of Yesso without any preparation by previous instruction, or in the smallest degree being fitted for a farming life in a comparatively rigorous climate, and there in a few years become successful and opulent farmers, turning the forests into fields rich with flocks and herds and golden grain, and making the wilderness blossom as the rose. Of course one recognises the necessity which forced the Government at that time to find, by every scheme that seemed to offer the least chance of success, employment for the crowd of useless officials that the change of the times had cast upon their hands. No doubt that as far as waste of public money is concerned, other departments of the Government would be equally open to the charge with far less excuse afforded by the purpose aimed at. The Katakushi Department, in spite of many mistakes in its management and the terrible outlay in proportion to the results obtained, has done much that is undoubtedly useful and successful. If it has bought dearly it has bought well, and no pains or expense have ever been spared by the Government to secure the services of those who from position and long experience were best adapted to conduct or advise in the direction of so important an undertaking.

But admitting all this, it cannot be disguised that the colonization scheme, as at first commenced, and in proportion to the magnificent scale on which it was projected, proved but a small success. Yet the experiment has not been valueless, and all the outlay, great and extravagant as it has often appeared, has not been entirely thrown away. Of this there is abundant proof in the founding of the Agricultural College, of which the First Report is before us, and a perusal of it encourages the hope that the seed sown at a serious cost will eventually blossom and bear good and abundant fruit. The Sapporo College is an institution on no extravagant or Utopian scale. It is modest, unpretending and hard working, and its very establishment proves that its zealous founder and director recognises the fact that if healthy, enduring reforms are to be introduced into the present system of farming in Japan, and the agricultural resources of the island of Yesso to be developed and become of permanent value, such desirable results can only be accomplished by putting aside all fancy schemes and visionary ideas, and commencing from the prosaic beginning of plain instruction and hard work.

The Report has been carefully drawn up by Mr. W. S. CLARK, by whom the College farm has been organized, and is addressed to His Excellency the Minister of the Colonial Department. The College is under native direction, the chief being Mr. DZUSHIO HIROTAKE. At the head of the Foreign Staff is Mr. W. S. CLARK, with whom are allied a Professor of Mathematics and Civil Engineering, a Professor of Botany and Chemistry and a Professor of Agriculture. A native secretary and interpreter and a native farm-overseer complete the staff, which is certainly on a very moderate scale. According to the report "the College was founded by the Colonial Department for the education and practical training of young men from all parts of the Empire, who are expected to become its employés after graduation, and to remain in its service for the term of five years." At present there are twenty-four students at the College, the number of whom is limited to fifty. The course of instruction comprises the usual subjects of a sound English education, special attention being given to surveying and civil engineering so far as required in the construction of ordinary roads and railroads, and of works of drainage and irrigation, together with "the most thorough instruction in the theory and practice of Agriculture and Horticulture, the various topics being discussed with constant reference to the circumstances and necessities of the farmers of Hokkaido."

The College is conducted on the American system, the model chosen being the Massachusetts Agricultural College, from which institution the various foreign teachers have been selected, and by whose president, expressly sent over for a year for that purpose, the Sapporo College was first organized.

The object for which this College has been founded in Yesso by the energetic head of the Kaitakushi Department is that an efficient staff of young men may be educated as its officers and thus "become familiar with its climate, soil and resources and be qualified to aid efficiently in the development of its various productive industries." By these means it is hoped the land may be gradually reclaimed, and the agricultural wealth of the island so much increased as to afford inducements for emigration thither from other portions of the Empire, and to convert into permanent accessions the thousands of fishermen who have hitherto only visited the island during the fishing season.

One of the most important reforms sought to be effected is an improvement in the breeds of domestic animals, and there can be no doubt that if the Sapporo College succeeds in accomplishing this, and in so instructing the students, and through them the farming population, that care will be taken to maintain the improvement, it will have succeeded in introducing an element of future wealth into the country that cannot be too highly estimated. As Mr. CLARK says, "Horses and oxen are required for farm labour and for "draft, good milch cows for dairy products, beef, veal, and "hides, sheep for wool and mutton and swine for lard and "pork. The food thus produced would be chiefly consumed

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"by the people for the increase of their comfort and ability "to labour." In fact, in order to support and perform efficient labour in the comparatively severe climate of Hokkaido, it is necessary that the food of the people should be such as will afford more warmth and nourishment than the usual Japanese fare, and if meat only becomes abundant and cheap, the future population of Yesso must be large consumers of it. It is not alone in its coal fields that the future wealth of Yesso should consist. Food is as necessary as fuel, and if the agricultural population of the island is to increase and thus turn its undoubted natural resources to proper advantage, the rearing of cattle is a question of foremost importance. Moverover, manure is the gold and silver of agriculture, and the only way in which fertilizers can be abundantly supplied is by the rearing of farm animals. This again would necessitate the cultivation of root crops, Indian corn and foreign grasses, the last two of which, as Mr. CLARKE points out, are the most abundant and profitable crops of the northern portion of the United States. At present the successful breeding of cattle and sheep is surrounded by many difficulties, arising from the unfitness of the natural vegetation of Hokkaido either for hay or pasturage. It is therefore of prime importance that proper forage plants be introduced.

Again, the present ignorance of the farmers and their wretched mode of stabling cattle is a great obstacle in the way of successful stock raising. "Well bred animals, "which are the most profitable, could hardly survive the "winter storms with such shelter as the country people "deem sufficient for themselves. Good barns are therefore "required for the protection of the animals, crops and "manure from the injurious effects of the weather." A barn has therefore been erected which may serve as a model for imitation, with such modifications as circumstances may render necessary in different parts of the Empire, showing how indispensable such a structure is to successful farming and stock raising.

Space forbids us to notice at greater length this latest and, judging from the report alone, most practical and common sense endeavour to improve and increase what must necessarily prove the source of Japan's greatest future wealth, the agricultural products of the Empire; for it is only fair to suppose that if an improved system of farming should be successfully inaugurated in the Northern Island, it will be gradually adopted with certain modifications throughout the country. But enough has been said to show that the institution is in the highest degree worthy of praise, both for the spirit in which it is founded, and the practical manner in which its objects are sought to be attained. There is no attempt apparently being made to rear winners of future Ascots or Derbys. The farm certainly owns no long-pedigreed horses or worn out racers, purchased at fabulous prices for apparently no purpose but to show how easy it is to pay liberally for inutilities when the money comes out of some one else's pocket; no flocks of costly but decaying sheep; but there seems to be sound common sense guiding principles which argue well for the future usefulness of the Sapporo Agricultural College. As Mr. CLARKE sensibly remarks "While the details of the management of the College "farm must vary with circumstances, yet there should "always be some rational system in view. The following "facts and principles seem worthy of consideration in this "connection. As the farm is designed to be a model for "the imitation of the farmers of Hokkaido, it should first "of all be managed with economy. Unnecessary and "unremunerative expenditures should be avoided, and in "general only those enterprises should be undertaken which "promise a speedy return. It is much easier to begin new "and apparently promising undertakings than to carry them "through to a productive result."

SPIRIT OF THE JAPANESE PRESS.

SILK-WORM'S EGG CARDS.

(From the "Nichi Nichi Shimbun," 2nd November.)

We recently called attention to the sad failures among the merchants of silk-worm's egg cards at Yokohama. The raisers of cards and the dealers in them are actually ruining themselves. The cause of these failures is that the merchants, intent only on making money without trouble, take no warning by past losses, but go on in the same senseless manner, losing year after year and giving no consideration to what they are about. When they bring their goods to the market, they find that it is only to lose again and again, because they pay attention only to the branches of their business and none to improve the condition of thetrunk or root.

The other day the merchants of Yokohama held a meeting there, and discussed the question of the advisability of destroying their cards by soaking them in water, for the same reasons that induced them some years ago to burn them. Without making any effort to arrive at the actual causes of the dullness of the market the proposition was assented to. But scarcely had they put their seals to the agreement, when their ideas underwent a charge and it was then determined that each man should be permitted to dispose of his cards as he pleased. That every merchant should be entitled to the right of selling as he pleases is of course the proper mode of transacting business. To what good therefore do such consultations tend?

The Government will be compelled to take some decided steps in this matter. There are two alternatives. One is to limit the number of cards that may be brought to markot; the other is to let the merchants follow their inclinations in the matter and thus ruin the trade by their action. The officials must choose one course or the other. No advantage, either direct or indirect, can be obtained by secret interference. Some time ago the Government attempted to interfere, and made certain regulations with regard to silk-worm's egg cards, but their action was so severely criticised by foreigners, that the measure was abandoned and nothing has since been done in the matters. In 1874, however, a large number of cards were burned in Yokohama, and though we have no certain proof that such was the case, we believe that the Government bought those cards from the merchants and had them destroyed. Since 1875 the dealers have formed an association among themselves, and the Government showed itself disposed to help them and limit the number of their cards. In 1876, three wealthy merchants of Tôkiô and Yokohama assisted this association by lending money to its members and enabling them to keep up prices. We hear that the Government also secretly furnishes them with funds. There is no doubt that though the Government at this time did not appear to be openly concerned in the matter, it was secretly lending its assistance (to these merchants).

Both producers and merchants quickly discover that the Government will assist them. Relying therefore on this aid, and taking no warning from the experience of former years, they this season again conduct their business in a way that must naturally lead to ruin. To the weak kind of assistance lent by the Government can this state of affairs be attributed.

If the Government thinks that the trade in silk-worm's egg cards is one that is of no value to the country, why does it not openly interfere and prohibit their export? The merchants and producers would then take more pains about the quality of their silk, which would result in great profit to the country. Though foreigners might oppose the measure, Japan should defend her sovereign rights as an independent nation. It is not likely that the Italians would in consequence send out men-of-war to bombard Yokohama, but if the Government really believes that such action might lead to obstruction of trade, it would be well if it would take charge of the whole crop of eggs, receiving the cards as payment of taxes, and exporting them to Italy or

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

France. Surely foreigners could not raise any objections to such a proceeding.

If the prohibition of their export, the limitation of their production, or the Government assuming entire control of their sale, are not consider good suggestions, on the ground that the Government should not interfere in matters of trade, then we would urge that no assistance, direct or indirect, should be given by the Government. The cards will then become a production like tea or silk, and when the dealers in them lose year after year they will appreciate the necessity of conducting their business with greater care. At all events, the Government should refain from given secret aid, for this only affords the merchants encouragement for increased speculation, and consequent increased loss.

REVIEW OF THE INTRODUCTION OF CHRISTIANITY INTO CHINA AND JAPAN.

By JOHN H. GUBBINS, Esq.

Read before the Asiatic Society of Japan on the 27th October, 1877.

(Continued)

III.

From the foregoing sketches of the course of Christianity in both countries it will be seen at once that there is little similarity between the two. Dismissing the earlier attempts to introduce Christianity in China, scant traces of which were left when the later work was commenced, we find that this similarity begins and ends with the fact that the missionaries in each case were Portuguese by nationality and Jesuits by creed.

The conditions under which missionary work was instituted in the two countries could hardly have been more antagonistic. In China there existed a despotic monarchy, and the system of Government was centralization; in Japan the despotic monarchy was but a name, and the country though nominally under one head was in reality divided amongst a number of powerful chieftains, who ruled their territories and vassals each according to his own individual will.

Under the Ming dynasty China was in a prosperous condition. The Mongol yoke had been thrown off, and under the energetic government of Yuen-Chang and his successors, the administration was placed on a firm basis, the condition of the people was improved, and the country at large profited by the advantages of peace and independence until again disturbed by the victorious campaign of the Eastern or Manchu Tartars in 1640, and the civil wars which lasted until 1660. It is true that the Tartar bands from Manchuria, were beginning to prove themselves troublesome about the time that Christianity was introduced, but their inroads did not extend far beyond the northern frontier, and the rest of China was little affected by the fighting on the border.

On the other hand Japan was never perhaps in a state of greater internal discord than when missionaries first landed on its shores. Such a scene of intestine strife and anarchy as the country presented at this period can be found in the annals of few nations. The feudal barons were engaged in the prosecution of fierce feuds one with another by the aid of mercenary bands, which roamed at large, the terror of the country people, ready to enrol themselves under any banner which could pay for their services. The Mikado was a nonentity; the Court, Shôgun and Kugé were alike powerless to restore order; and to such a pitch had matters come that the monks donned armour for the occasion, and at the head of armed hosts added fuel to the fire that was raging, and took advantage of the prevailing uproar to settle questions of dogma with their co-religionists by the arbitrament of the sword.

Entering as Christianity did into the two countries under conditions so entirely different, it is no wonder that the characteristics of its progress should be dissimilar.

In China, owing to the vigilant system of police, it was only after repeated failures that the missionaries were at length able to effect a commencement. Introduced in in Japan under cover of the general confusion, Christianity worked its way silently for eighteen years, and had made considerable progress before the nation was fully alive to the fact of its existence. Whilst, therefore, on the one hand, we see the new religion making rapid progress in an obscure locality of Japan, on the other hand there is the spectacle of a new doctrine fighting its way up hill, beset from the very outset by obstacles which would have crushed a less dogged perseverance. Half a century saw Christianity rise to a height of prosperity in Japan, which it did not attain in China until a century later.

The Portuguese Jesuits being the first in the field of missionary labour both in China and Japan, it follows that the systems on which they went to work were to a certain extent similar. Still the *modus operandi* was in each case very different. In China the missionaries spread themselves over a large area, and from the very first conducted their operations on as large a scale as possible, which in Japan, owing to the peculiar condition of the country, was impossible. Although in each case the importance of securing a footing in the capital appears to have been fully recognized, the missionaries in Japan were not so successful in this respect as their brethren in China. The protection of the Court was throughout the strong point in the latter's favour. In China, moreover, the missionaries had a great advantage in having Macao close at hand as a basis from which to work, and the regular supplies which they received from this quarter, joined to the settled state of the country, enabled them to establish communities in various places which could without any very great difficulty communicate regularly with each other. The method of work was thus better organized and more thorough than that in Japan; lastly the adoption of the garb of *literati* enabled them more easily to escape detection by the Chinese authories.

Though Macao was of great use to the Japanese missionaries, as they obtained their supplies indirectly from thence, still navigation being then comparatively in its infancy, it was too far to be of the same service to them as to their compatriots in China. At first their only port of supply was in Hirado, and communication could not have been very frequent, for later on, when Nagasaki had taken the place of Hirado as the place of call for Portuguese vessels, we read that they only received their supplies once a year by means of an annual galleon sent by the traders of Macao. We have already alluded to the unsettled state of the country which had the effect of localizing their work. Pagés, too, speaks of the Jesuits being much hampered in their operations by the want of funds. How the other orders received their supplies, and how and by whom they were maintained is not clear, but the Jesuits depended entirely on the subsidies from the Pope and the King of Portugal; and upon these, the payment of which we are told was sadly irregular, and such charitable alms as they received from different sources, they subsisted. The Jesuits had thus from the first been unable to extend their operations to the northern provinces of Japan, owing to the necessity they were under of keeping within reach of their port of supply. But the footing for trade gained by the Spaniards, which resulted in the throwing open to them of various Ports in the N. E. of the country, enabled the Franciscans to establish themselves in the neighbouring districts.

The policy adopted by the Jesuits in regard to their Missions is well described by one of their writers. He says:—"The zeal and heat of those persons who would "convert the world perfectly on a sudden is much to be "commended; and we do esteem and reverence it "in all; nevertheless in new missions and particularly in "such which are not susceptible of this fire which flameth "out so suddenly, but do require to be disposed to it by "longer time, we do endeavour to retain them within the "limits of prudence more safe, and the bounds of patience "more profitably for that which is pretended to by our "Society, whenever we meet with any of such a spirit "among us; and if that will not serve, we send them to "the pulpits and auditories of Europe, where that fire "may shine out without any danger of burning. And "this is observed by us in order to the Gentiles."

Ricci was a perfect specimen of the Jesuit missionary considered suitable to China. He is described as possessing "a zeal courageous and indefatigable, but wise, patient, "and circumspect, slow that it might be more efficacious, "and timid in order to dare the more."

It is possible that the rapidity of the progress which

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Christianity in Japan made in the districts to which it was confined may have made the missionaries generally more careless, but the prudence and patience above mentioned were certainly not distinguishing features of the Franciscans in Japan. Their indiscretion is allowed on all sides. At a time when the suspicions of the Government were aroused, and a prohibitory edict had been issued, these zealous preachers of the Christian faith went about openly in all parts of the country, assuming no disguise, and disdaining the use even of ordinary precautions.

The bad feeling which existed between the different orders must have worked much harm to the cause of Christianity in both countries. In China the advisibility of permitting converts to practise their Ancestral Rites and the meaning of the terms *Tien* and *Shangti* were the particular points of disagreement. In Japan, besides the dispute respecting Pope Gregory's Bull, we find the Jesuits accusing the others of indiscret zeal and being met with the counter-charge of timidity. Doubtless the main current of events in each country would not have been altered if the Jesuits had always remained alone in the field, but it is only fair to them to state their mode of operations was that best calculated to ensure success.

There is an important distinction in the "Christianities" of China and Japan which should not be left unnoticed. Among the causes which operated in favour of the missionaries were Trade in Japan and Science in China. That the early missionaries in the former country owed their success in a great measure to their connection with commerce we have many proofs, which leave little room for doubt. Charlevoix particularly speaks of the understanding between the missionaries and the Portuguese traders, and in one instance we are told that a Daimio who had proved hostile to the Christian cause was only permitted to have commercial dealings with the Portuguese ships which then visited Japan, on the condition that he would grant certain concessions on behalf of their religion which the missionaries demanded. Trade and Christianity went hand in hand. It was commerce which was first the means of introducing Christianity; it was the same agent that assisted it in its checquered career; and it was commerce which enabled the Franciscans to establish themselves later on in the N.E. of Japan.

In China things were different. Here there were no independent feudal barons to engage in commercial enterprises on their own account. A large Empire long accustomed to be dependent on its own resources and unwilling to break with its own traditions as long as the administration was in the hands of a conservate bureaucracy, was not likely to welcome a few missionaries preaching a new and strange doctrine for the sake of trade with foreign countries. Besides, it was not, as in Japan, a case of, no missionaries—no trade. The little foreign trade that did exist had its origin with the establishment of Macao in 1517,—sixty-seven years before the first missionary settled in Canton. Moreover, the earlier efforts of both Nestorians and Catholics had had no connection with trade. It is not to any connection with commerce, then, that we can trace the success which attended the introduction of Christianity in China. Still another agent, no less powerful in its way, was not wanting. Unlike the Japanese, who from never having enjoyed the blessings of peace and good government were still in that state of primitive civilization in which letters do not bear an important part, the Chinese had reached a very high degree of mental culture, and letters were then, as now, the stepping stone to rank and influence, and the *literati* the most powerful and respected class in the country. With the shrewd tact which has marked the Jesuit policy in all ages, the missionaries were not slow to comprehend the situation, and indeed they had the very elements necessary for success in themselves. No small share of the learning and science of the Middle Ages was held by the Jesuit confederacy, and in this respect the individuals chosen to lead the way in China were in no way behind others of their order. We see them, therefore, busily making use of their knowledge of the Chinese language to instruct the natives in arts and sciences in which western nations excelled. Were the Chinese indisposed to listen to the truths of Christianity, they were amused by instructive discourses on mathematics and other branches of learning; did a Chinese audience shew inappreciation of a religious exhortation, forthwith a lecture on some abstruse science was substituted.

In this way the missionaries gained the ear of the Chinese and at the same time established their reputation as men of learning and their claim to be regarded as on a par with the native *literati*. This explains the presence of the missionaries at Court, where Ricci, Schaal and Verbiest successively filled the chair of Astronomer Royal, and is the secret of the favour and protection so longer accorded to them by the Chinese Government.

It is interesting to note the nature of the opposition which Christianity encountered in each country. In China this opposition had its origin in three sources, the jealousy of the *literati*, the suspicions of the Government and the animosity of the Buddhist clergy. To take the last first, Semedo, Kirchere, and other writers make mention of the hostility displayed by the Buddhist Church, so we may suppose that what influence it possessed was exerted against Christianity. But this influence was small, Confucianism and Rationalism, doctrines more suited to the cynical indifference of the Chinese mind, left little elbow-room for Buddhism. As has been well pointed out by a modern writer, with the imposition of the once envious pigtail the yoke of the Tartar ended. Though Buddhist himself he was never able to impose his religion on the multitude of free-thinking Chinese. The Buddhist clergy were held in little respect and exercised but slight influence over the minds of the masses. The mainsprings of the opposition which Christianity encountered in China lay in the *literati* and Government. Owing their early success—primarily to their rare scientific acquirements—it is only natural that the line of policy thus adopted should have brought them into contact with the *literati*. It is not difficult to imagine that in the numerous arguments and discussions which must, from the nature of the case, have been carried on between the two, the superiority of the foreign scholars had the effect of exciting universally the jealousy of the former; and that these, chafing at the ascendancy of the missionaries in numerous intellectual attainments in which they had hitherto possessed a monopoly, lost no opportunity of securing their expulsion from the Empire. Hence, whenever popular outcry was raised against the Christians, we find the *literati* at the bottom of the movement; and they were also the authors of the calumnies which were whispered in the ears of the officials against the Christians and their teachers. And the suspicions of the Government were easily roused. For the local officials, becoming alarmed at the reports which reached their ears, or anxious to shew inexpensive zeal for the public service, were never slow to present memorials in which they represented the Christians as members of a secret society which was plotting against the Government. An accusation which the prevalence of such societies at all times in China rendered very plausible. The proofs of it were brought in the shape of lesser charges as follows:—It was said that, "The Christians hold mighty meetings at "their houses at certain stated times, when thousands of "people assemble; that each convert is presented with "five ducats made by a process of alchemy; that they "have arms secreted in their houses; that they are all "instructed to make the sign of the cross upon their fore-"heads in order that this may serve as a mark by which "the adherents of this society may recognize each other "when the time for organizing the insurrection arrives."

Similar charges might have been made with equal justice against the Jews and Mahomedans resident in the country, who kept themselves quite as much apart from the body of the people as the Christians. Probably, however, their passive attitude in regard to their respective creeds furnishes the reason for their being unassailed, while it is no less probable that the religious enthusiasm of the Christian converts, and the quarrels which existed amongst their teachers, increased suspicion in the Chinese mind to which religious fanaticism and sectarian jealousy are alike foreign.

In Japan the opposition was of two kinds, political and religious. The political opposition which Christianity encountered was shewn in the attitude of the Government. The favorable reception accorded to the semi-political,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

semi-religious embassies to Japan, these missions owed almost entirely to their political importance. The missionaries were never in favour at Court except for a short time under Nobunaga, and when they were not actually molested were persistently ignored.

As regards the religious opposition brought to bear against Christianity, it has already been shewn how powerful was the Buddhist priesthood at the time of the introduction of Christianity, and the Jesuit records leave no room for doubt that the opposition met from it by Christianity was very great. And although the capacity of the Buddhist clergy for resisting Christianity openly was greatly lessened by the treatment they received at the hands of Nobunaga, still the weapon of intrigue was always available, and there are many indications that they used it unsparingly.

It may be thought that too much importance has been attached to the influence exercised by the Buddhist clergy. It may be said that the solution of the question is that the Jesuits had acquired such a hold upon the country as to embolden them to assert the temporal supremacy of the Pope, and by precept and example to instigate their converts to set at defiance the law of the land; that the Government suddenly awoke to the fact that a large portion of their subjects were passing from their control, and that their suspicions being roused, the advent of the Dutch and the information they gave respecting the aims and objects of the Papacy, turned the scale against the missionaries. The sweeping measure of expulsion affecting all foreigners alike is pointed to by the holders of these views as a proof of its correctness; the severity of the persecution when once commenced is attributed by them to the effect of panic on the part of the ruling powers; and they explain the fact of greater leniency being shewn to the missionaries and converts in China by assuming that the missionaries in the larger field of operations never obtained a sufficiently firm foothold to justify them in making a similar claim for Papal supremacy.

This view, however, plausible it may appear, is not borne out by facts.

Apart from the circumstance that there is no evidences to prove that the missionaries ever went so far as to assert the temporal supremacy of the Pope, the Japanese records are unanimous in the testimony which they give respecting the attitude towards Christianity of the three great men, whose successive administrations embrace the period of Christianity in Japan. And this evidence shews how Nobunaga, though at first favourable to Christianity, later on repented of his sanction to its introduction, and how both Hidéyoshi and Iyéyasu were opposed to it from the outset of their administrations. Christianity was, it is clear, tolerated for political motives. It owed its rapid progress to the unsettled state of the country. The powerful nobles of the South paying but a nominal allegiance to the Court, availed themselves of their practical independence to introduce Christianity for the sake of the commercial advantages which it offered. Nobunaga never felt himself strong enough to prohibit it; Hidéyoshi, whose military ambition left him little time for anything but warlike expeditions, was probably deterred from the adoption of extreme measures by similar reasons; and it was thus left for Iyéyasu, who had the advantage of succeeding the other two, to carry out the policy in which it is clear that they all concurred.

It is thus apparent that the measure of 1613 was not the effect of any sudden disclosure respecting the power and aims of the Jesuits. It was but a continuance of the policy previously inaugurated by Hideyoshi in 1593.

There is nothing whatever, also, to discountenance the view that the Buddhist priesthood actively participated in the expulsion of the missionaries. Amongst other evidence we have a document written by a priest in the very year (1614) in which the edict of expulsion was carried into effect, which descants in severe terms upon the evils likely to arise from the teaching of the foreign missionaries, "Who have," it says, "come to Japan, "*not* in order to promulgate their religion, but with a "view to possess themselves of the country. Japan has "two state religions and has no need of a third; there- "fore this new religion should be stamped out.

The leading characteristics of both nations have left their impress upon the history of Christianity in each country.

The Chinese, naturally bigoted, impassive, and slow to grasp a new idea which is unattended with any practical association, viewed the new doctrine taught by the Roman Catholic missionaries with disfavour for a long time, and it was only by long and patient endeavours that converts were made. These once made, however, they exhibited the same tenacity in adhering to their new faith that had marked its previous rejection by them. This explains at once the show progress made by Christianity in China and the fact of its vitality long after it had been trodden out in Japan.

The Japanese, though a long seclusion from the outside world has imparted a narrow-mindedness to their character, are not so fettered by tradition as the Chinese, and unlike the latter they are impulsive and singularly quick to receive new impressions. They lack, however, the solidity of character and reasoning capacity of the average Chinese. The doctrine taught by the foreign missionaries had for them the charm of novelty and they accepted it eagerly. But it is very doubtful if they ever approached the Chinese as regards the intelligent appreciation by the latter of the fundamental tenets of Christianity. The latter had attained a higher degree of mental culture, and are to this day a more thoughtful and practical race than the Japanese.

The Jesuits in China mention that the great mass of their converts belonged to the middle class, whilst it is clear that in Japan the converts were mostly taken from the peasantry. One reason for this difference is probably to be found in the fact that in China the prosperous state of the country under the Ming dynasty, by favouring the growth of trade, had enabled the middle classes to secure a position which in Japan they were unable to do owing partly to the unsettled condition of the Empire.

In other words, in China there was a prosperous middle class; in Japan this class had yet to make its appearance. If may be also that the policy which induced the missionaries in China, to assume the dress of the *literati* had the effect of bringing them into contact with the more educated portion of the nation. In Japan, too, that curious division of classes and their respective positions in the social scale which existed until comparatively recent times, and by which the farmer, or peasant, was placed above the merchant and artizan, had possibly some influence in guiding the missionaries in their choice of converts At least it may safely be said that the lower classes were thus brought into prominence, a fact which would probably not escape the notice of the propagators of Christianity.

But perhaps, after all, the greatest difference between the Christianities of China and Japan is to be found in the nature and extent of the persecution to which each was subjected. It has already been pointed out that the religious feeling was at a low ebb in China, and it has been shewn how the opposition encountered by Christianity in that country originated in the jealousy of the native *Literati*, and was fostered by the suspicions of the Government. As a natural consequence it followed that the persecution in China was secular and official in its nature, and political in its object. It has also been shewn how in Japan there is every reason to suspect the connection of Buddhist intrigue with the opposition given to Christianity, and this conclusion is confirmed by the features of the persecution in the latter country. The fierceness and virulence with which it was conducted contrast strongly with the mildness of the prosecution in China, and can only be explained on the assumption that it was to a great extent religious in its nature.

In China the prosecution began with the first introduction of Christianity, and continued with more or less severity up to modern times. It was never, however, very fierce. One explanation of this suggests itself. Toleration of creeds has always been a national trait, and thus the adherents of all creeds have invariably found an asylum in China. Whether Confucianists, Buddhists, Mahomedans, or Jews, so long as those following these various religious systems remained good citizens and refrained from interference with their neighbours, they were permitted free exercise of their respective religions. The

Digitized by Google UNIVERSITY OF CALIFORNIA

conduct of the Christians, although they possibly did not maintain an altogether passive attitude in regard to religion, was probably not marked by that fanatical zeal displayed by their co-religionists in Japan. Whether this be one of the reasons or not, certain it is that the persecution in China never attained any great degree of severity. Semedo and other writers speak of the native converts being arraigned before tribunals, of their suffering, lengthened imprisonment with forfeiture of houses and property and being cruelly bastinadoed; but they generally escaped with their lives, and if condemned to exile found a refuge in other provinces where they were secure from the persecution which threatened them in their native districts. And this also applies to the foreign missionaries. A few isolated instances of missionaries having suffered death are all we find during a course of nearly 300 years.

When we turn to Japan the contrast is startling. The persecution here was widely different both in nature and extent. It is unnecessary to touch on the persecutions before 1613. As has already been pointed out, with the exception of the persecution in 1588 in which nine missionaries lost their lives these were merely local, and even in some instances were provoked by the mistaken zeal of the converts, who not, content to let well alone, endeavoured to force their own convictions upon unsympathising neighbours.

Persecution in Japan did not break out in its fullest extent until after the edict of 1613. Then it burst upon the heads of the devoted Christians with all the fury of a pent-up flood, carrying all before it. Japanese records, hitherto almost silent on the subject of Christianity, supply us with abundant details concerning the persecution then instituted.

A special service, it appears, was organized which was called the Christian enquiry, and the men entrusted with its superintendence were chosen from among the trading nobility. Notifications urging the adoption of the strictest measures followed each other in rapid succession, and a system of rules for the regulation of this "enquiry" was drawn up, in which the minutest details regarding the search after Christians and missionaries, their arrest, imprisonment, examination and punishment, were carefully entered into. Government officials in the oaths which they took when accepting office, bound themselves amongst other duties to render every assistance to the "Christian Enquiry"; and a scale of rewards for the apprehension of Christian, nissionaries, and those who harboured them, was prepared and published, these rewards being increased as the decreasing number of both converts and teachers rendered the search after them more difficult. Nor were the ties of family and kindred respected. High inducements, reaching to the extent of pardon if the informers were Christians, were held out to parents to inform against their children, and to husbands to denounce their wives. In short, while the persecution lasted, the crime of harbouring a Christian, or of being cognisant of the existence of a Christian and not denouncing him, was only surpassed in enormity by the more heinous offence of being a Christian.

The description of the tortures to which the Christians were subjected reads like a page of Dante's Inferno. The mode of death seems in many cases to have been left to the whim and caprice, if not of the executioners, of those who superintended the executions, and though a great number perished by the ordinary modes of execution, such as hanging, crucifixion, strangling, and drowning, in several instances the most ingenious tortures that cruelty could invent were put into practice.

We read of Christians being executed in a barbarous manner in sight of each other, of their being hurled from the tops of precipices, of their being buried alive, of their being torn asunder by oxen, of their being tied up in rice-bags, which were heaped up together and of the pile thus formed being set on fire. Others were tortured before death by insertion of sharp spikes under the nails of their hands and feet, while some poor wretches by a refinement of horrid cruelty were shut up in cages and there left to starve with food before their eyes. Let it not be supposed that we have drawn on the Jesuit accounts solely for this information. An examination of the Japanese records will shew that the case is not overstated.

Who can wonder, in the face of these facts, at the Shimabara insurrection? The only matter for surprise is that many similar outbreaks did not occur. Had the Christians been united, such atrocities could not have failed to rouse a spirit of resistance culminating in open rebellion, which, if successful, would have shewn scant mercy to the oppressors. But the scattered state of Christian communities made united action impossible, and thus with the exception of a few obscure hints at disaffection and local troubles which are met with in Japanese books, the Shimabara Revolt remains the solitary instance of the Christians having risen against their persecutors.

While on this subject it may be well to state that there are two very different accounts of this revolt which are given in the "Shimabara Kassenki" and the "Samedaresho." In the first, the leaders of the revolt, mentioned as five in number, are described as being former retainers of the Christian convert Konishi-Setsu-no-kami; in the latter the outbreak is stated to have been fostered by the intrigues of one man, an adventurer, and great stress is laid upon the fact that the discontent which preceded the revolt was mainly caused by the bad government of the reigning Prince (who was afterwards deposed). In any case, in computing the extent of the rising, one must allow for the exaggeration common to all writers of early history, and the number of the insurgents, given at 30,000 is reasonably open to doubt.

It only remains to consider one feature which is common to the history of Christianity in both China and Japan. We allude to the small moral and intellectual influence which the practice of Christianity has exercised in either country. The early Christian, mission when they were swept away by the tide of Tartar invasion, left no traces behind them of any permanent influence upon the minds of the Chinese nation. Nor were the later introductions of Christianity which are the subject of this paper more successful. In Japan it was the same. Thus, under different conditions, the same result was reached in each country.

In the violence of the persecution to which Christianity was subjected in the latter country, joined to the social status of the majority of the converts, and the important circumstance that the crusade against the missionaries began just when the period of Japan's greatest internal prosperity had commenced, we find the main causes of this failure,

In China, on the other hand, it is unnecessary to look further than the national character. The Chinese as emigrants in whatever part of the globe present the striking picture of small communities on foreign soil living entirely apart from the people of the country, Neither the language, nor the religion, nor the habits of the nation among which they dwell have the slightest effect upon them. They leave in each case, as they came, Chinese in every respect. And if this insensibility to foreign influences be manifested when surrounded by all the accessories of foreign civilization, how much harder the task of affecting their native stoicism in their own land, amidst a population of three hundred millions wedded to its conservative notions by the fetters of ancient tradition.

It will occur to most readers of the preceding pages that the present efforts in the cause of Christianity are made under many favourable conditions. It will be seen that Christianity now stands distinctly on its own merits; that though unaided by any powerful political supporters it no longer has to fear opposition from the Government arising from suspicion of foreign designs of territorial acquisition; that it is no longer exposed to the terrors of a persecution which the feeling of the age has ceased to sanction; and that its true aims will be brought out more clearly by its disseverance from politics and trade.

Also may it be observed that increasing intercourse with foreign nations, for which greater facilities are daily afforded, must at length break down the barriers raised by ignorance and distrust; and that as the education of the young is a better weapon with which to meet the indifferentism of the upper classes, so prevalent in each country, than the conversion of the adult population, the establishment of schools, and medical missions, and the gradual diffusion of knowledge in these and other ways, are the surest roads to success,

ASIATIC SOCIETY OF JAPAN.

The following were the remarks made by Mr. Satow at the meeting of the Asiatic Society in Tôkiô on the 27th ultimo, after Mr. Gubbin's paper on "The Introduction of Christianity into China and Japan" had been read :—

Persecution and opposition of various kinds had characterized the progress of the Jesuit missions almost from the very commencement. The fathers were frequently unfortunate enough to have been patronized in the first place by chieftains who afterwards succumbed to powerful enemies, such for instance as Suye Harukata at Yamaguchi, the Ohotomo family in Bungo, the sons of Nobunaga and Hideyoshi. We may also suppose that the favours which had been shown to them by Nobunaga himself were no reason why Hideyoshi should take their part after Nobunaga's assassination. Nevertheless, the Jesuit missionaries conducted themselves with great tact, and it is by no means improbable that they might have continued to make converts year by year until the great part of the nation had been brought over to the Catholic religion, had it not been for the rivalry of the missionaries of other orders. To the natural rivalry of teachers of a different school we must add the effects of the international enmity which existed between the Portuguese of Macao and the Spaniards of Manila, and when the Dutch and English came upon the scene they in their turn endeavoured to excite the suspicions of the Japanese rulers against their hereditary foes the Spaniards. We have evidence of this from European annalists. The following well-supported story of English and Dutch treachery is from a Japanese source.

"In the year 1617 (third of Genna) a Dutch vessel fell in at sea "with a ship of Chinese build, and observed on board several in- "dividuals who appeared to them to be Bateren.[1] As the Dutch "used at that time to trade to Hirado, they brought the ship in "there, and reported the matter to Matsura Iki-no-Kami, who sent "information to the Governor's office at Nagasaki. Hasegawa "Gonroku was at once despatched to Hirado, to conduct an in- "quiry into the facts of the case, from which it appeared that the "ship belonged to a native of Sakai in Idzumi, named Jôjin, and "that she had been on a trading voyage to Luçon. Several letters "written in barbarian character were discovered on board, which "were handed to the Hirado interpreter Mori Sukeyemon to be "translated. They were found to be addressed to Bateren from "barbarous countries who were lying concealed in Japan, and "their purport was to the effect that as soon as the greater half of "the Japanese nation had been converted to the Kirishitan Sect, "information should at once be sent to the writers, upon which a "large fleet of war-vessels should be despatched. In consequence "of these facts the Bateren who had been found in the ship and "Jôjin were taken prisoners to Nagasaki, and there burnt, the "remainder of the crew being decapitated. Rewards for their "fidality were given to the Hollanders on this occasion."[2]

The capture here spoken of his no doubt that of the fathers Luis Flores and Pedro de Zuniga, by an English vessel the *Elizabeth* in 1620 off the coast of Formosa. The vessel, crew and Jesuits were transferred by the captain of the *Elizabeth* to the Dutch, who brought them in to Hirado. Jôjin is probable Joaquim, a converted Japanese, captain of the junk. It would be absurd to believe that the letters which are said to have contained information about treacherous designs on the part of the Spaniards of Manila were genuine. We know that both the English and the Dutch in those days did all in their power to prejudice the rulers of Japan against the Portuguese and Spaniards, whether missionaries or merchants, and even two centuries ago the Dutch were accused of forging a letter, which purported to be written by the Portuguese Bishop in Nagasaki to the Viceroy at Goa, and from which it appeared that the Spaniards and Portuguese had formed the design, not only of converting the Japanese to Christianity, but under the cloak of religion, of bringing the whole country under their rule, and this letter, having first concealed it on board a Portuguese vessel bound for Goa, they caused to be discovered by the Japanese authorities. This story may be read in Mercklein's appendix to Caron's Japan, and Arnold's annotations thereto, p.p. 285 and 286, and to the discovery of the letter is attributed by Montanus those measures of the Shôgun which provoked the insurrection of Shimabara, which drew in its train the expulsion of the Portuguese from Japanese in 1639.[3]

Another cause which must have contributed no little to the difficulties of the missionaries was the hostility of renegade Christians towards the religion which they had abandoned. Montanus gives a specimen of this in the language addressed by the apostate Syovan to the Jesuits Pedro Marquez and his companions in the presence of the Dutchman Schaep,[4] and other cases may easily be found in the pages of European writers. In the *Kuwanken-roku* already cited, is the following story of an ecclesiastic (apparently of Japanese birth) who turned informer :—

"In the year 1611 (16th of Keichô) a priest arrived at Sumpu "from Yatsushiro in Higo, and prayed leave to bring an accusa- "tion. He said that he was a priest of a Kirishitan temple which "had been built by Konishi Tsu no Kami, formerly lord of the "province of Higo. That the superior of the temple had made "unjustifiable accusations against him, and expelled him from the "said temple. That if His Highness would summon the other "priest to appear and deign to examine into the rights of the "matter, in token of loyalty, he would give an account of the "objects of the Kirishitan sect. His opponent the other priest, "was summoned to Sumpu, and the case was throughly investigat- "ed. The opponent, being adjudged to be in the wrong, was "punished. The other priest, out of gratitude for the benefit he "had received, gave the following account of the principles of "Kirishitan :—'The King of Namban[5] devoted the revenue of "'the five countries which composed his dominions to the follow- "'ing objects. Every year, under the name of merchant-vessels, "'ships were sent to Japan laden with gold, silver, precious "'gems, woven fabrics, and articles of *rertu*, for the purpose of "'recommending to everybody the evil religion. The Bateren and "'Iruman[6] annually prepared a record, in which was inserted, "'the number of persons who had been induced to join the re- "'ligion in that year, and the valuable goods which were distri- "'buted among them in proportion. From ancient times the "'Namban men, in this cunning way had been wont to send val- "'uable and curious commodities to Luçon. Hisupaniya[7] and "'other countries in the Southern Seas, where at first they "'obtained the loan of a very small piece of ground, on which "'they then built a temple, and began secretly to teach Kirishi- "'tan. The ignorant inhabitants of those countries believed in "'their doctrines, and finally becoming allies and partisans of the "'Namban men, enabled the latter to seize possesion of the land "'without any trouble. The Barbarians then proceeded to send "'governors to the countries which they had seized, took pos- "'session of the land, its valuable produce, and of all the gold "'and silver as their own property, and every three years sent "'these treasures to their own country.' Furthermore, a number "of priests who were lying concealed in the Home Provinces and "in Kiushiu were summoned to Sumpu, and subjected to a search- "ing examination, from which the statements of this priest clearly "appeared to be true. Upon this a decree was published strictly "interdicting Kirishitan throughout the Empire, Itakura Iga "no Kami was appointed to hold trials in the Home Provinces, "and Yamazaki Nagato no Kami in the island of Kiushiu ; and all "the persons of the evil sect who were discovered in Kiôto, Osaka, "Nara, Fushimi and other towns were decapitated on the dry bed "of the river at Gojo.[8] Those of them who, changing their evil "hearts, were converted to right principles, and petitioned for "leave to adopt a new belief, were spared under the designation "of *korobi* (fallers)."

[*Kuwanken-roku*, Vol. I., p. 18.]

This account is confirmed partly by the reports of the missionaries in their annual letters. The proclamation referred to is as follows :—

PROCLAMATION OF IYEYASU.

The Positive Principle is the father, the Negative Principle the mother by whom man is begotten, and with his birth the Three Powers are complete.

Japan from the commencement was the country of the gods. The unfathomableness of the Positive and Negative Principles is called god, and who shall refuse reverence and honour to the essence of all that is Holy and Spiritual. Man owes his existence entirely to the workings of the Positive and Negative, in his five members and in the six sources of perception, in his uprising and sitting down, in moving and in being still, he is not independent of god for a single moment. The divinity is sought for elsewhere; everywhere man is provided with a divinity, and contains a complete divinity within himself. This is the form which divinity takes.

Japan is called the land of Buddha, and not without reason. It is written : "This is the country where the divine brightness re- "appears, this is the native-land of the Sun." The Lotus of the Law says : "The power by which Buddhas save the world, resides in their perfect omniscience, whereby they make happy all living

beings, wherefore they make manifest immeasurable divine power." This is a golden saying, a miraculous passage. God and Buddha differ in name, but their meaning is one, just as if the two halves of a tally be placed together. The priests and laymen of antiquity, by the divine aid, sailed over the ocean and visited the far-off land of China in search of the law of Buddha, and the doctrines of the principles of benevolence, unweariedly they bore hither the esoteric[9] and exoteric books. Since that time the doctrine has been handed down from teacher to teacher in unbroken succession, and the glory of the Buddhist Law has been far greater than in other lands. This exemplifies the truth that "the Law of Buddha gradually travels eastwards."

But the Kirishitan band have come to Japan, not only sending their merchant vessels to exchange commodities, but they long to dieseminate an evil law, to overthrow right doctrine, so that they may change the government of the country, and obtain possession of the land. This is the germ of great disaster, and must be crushed.

Japan is the country of gods and of Buddha; it honours god and reveres Buddha. The principles of benevolence and right-doing are held to be of prime importance, and the law of good and evil is so ascertained that if there be any offenders, they are liable according to the gravity of their crime to the five punishments of branding, nose-slitting, cutting off the feet, castration and death. In the Book of Etiquette it is said: The degrees of mourning are many, and the appropriate dresses are five. Crimes are many, and the appropriate punishments are five. If there be one suspected of crime, let the gods bear witness. By oath shall be determined the offence and its punishment, and the distinction between guilty and innocent shall not err by a hair's breadth. Criminals of every degree are detested by Buddha, god, the trinity of precious ones, mankind, Heaven and all living things. The overflowings of accumulated wickedness shall not escape; whether by crucifixion or burning in the furnace, punishment shall be meted out, for this is the way of encouraging the good and chastising the evil. Though one may desire to keep down evil, it accumulates with ease; though one desire to advance in good, it is difficult to hold by; and thus a watch must be kept. In the present life it is so, and in the next not even all the Buddhas past, present and to come, can save from the reproaches of the King of Hell, nor can the succeeding generation of our ancestors succour us. Fear and tremble!

The faction of the Bateren rebel against the dispensation; they disbelieve in the way of the gods, and blaspheme the true Law, violate right-doing and injure the good. If they see a condemned fellow, they run to him with joy, bow to him and do him reverence. This they say is the essence of their belief. If this is not an evil Law, what is it? They truly are the enemies of the gods and of Buddha. If this be not speedily prohibited, the safety of the state will assuredly be hereafter imperilled; and if those who are charged with ordering its affairs do not put a stop to the evil, they will expose themselves to Heaven's rebuke.

These must be instantly swept out, so that not an inch of soil remains to them in Japan on which to plant their feet, and if they refuse to obey this command they shall suffer the penalty. We have been blessed by the commission of Heaven to be lord in Japan, and we have wielded power over this realm for years past. Abroad we have manifested the perfection of the Five Cardinal Virtues, while at home we have returned to the doctrine of the scriptures. For there reasons the country prospers, the people enjoy peace. The Scripture says: "If the present life be peaceful and tranquil, there will be a good place in that to come." Kung-fu-tze also has said: "Body, hair and skin we have received "from our father and mother; not to injure them is the begin- "ning of filial piety." To preserve one's body is to revere god. Quickly cast out the evil Law, and spread our true Law more and more, for the way of the gods and the Law of Buddha to prosper in spite of the degeneracy of these latter days is a mark of a good ruler. Let Heaven and the Four Seas hear this and obey.

This edict was published on the 27th January, 1614, (the 12th month of the 18th year of Keicho) and was accompanied by a set of fifteen rules intended to guide the priests who were to guarantee the orthodoxy of their parishioners.

1.

Because the Kirishitan law teaches that those who despise death cannot pass through fire without being burnt, or be plunged into water without being drowned, and that those who die by shedding their own blood are saved, the law of the Empire is more strict. Therefore you must examine such as make light of death.

2.

To those who follow Kirishitan a daily allowance of seven *iin* is made from Dattan (?) land, in order to convert the Empire to Kirishitan. It is an evil Law which injures the country of the gods. As the persons who follow these doctrines do not observe the Law of Sâkya, they object to paying contributions to their parish temple, and dislike the establishment of the Buddhist Law. Such you must examine.

3.

Such chief parishioners as do not attend on the anniversary of the founder of their sect, on Buddha's death-day, at Bon, Higan, the death-day of their ancestor's, must lose their certificates, and notice given to the Office of Sects. They must certainly be examined.

4.

Persons who belong to the Kirishitan or to the *Fujiu-fuze* refuse the priest's visit on the anniversary of their ancestors. On that day they are in the habit of paying an informal visit to the temple of their sect and then secretly assembling their [family of laymen; when the priest arrives they look displeased, and refuse his aid. You must therefore examine them.

5.

You must understand that by *Fujiu-fuze* are meant such as do not pay their parish-contribution, and following their own devices, refuse the offices of the chief priest who certifies to the fact of belonging to the sect, do not share in the expenses of the temple of their sect in due proportion to their substance, and in their hearts cherish an evil law.

6.

The Law of *Fujiu-fuze* is that its followers refuse to accept anything said to them by the temple of their sect, refuse to contribute to the expenses of the founder of the sect, to the repair of images and the temple charges generally, nor will they have anything to do with another sect. This is an evil Law. The true law is that human beings who receive the benefits of Heaven should give to Earth; that those who have received benefits from their parents should give to their children, and that those who received from Buddha should give to the priests. Therefore you will examine them.

7

[11]Kirishitan, the Hiden-sect and the *Fujiu-fuze* are three branches of one sect. The god whom they adore is called Godzu-Kirishitan-Teidzu-butsu; and Teidzu calls himself Daiusu (? Deus). By the help of this god, if they look in a mirror, they see the face of a god, but if they have changed their religion they appear as dogs. This is a mirror of evil law. Those who once look at it believe profoundly in Godzu-Kirishitan-Teidzu-butsu, and regard Japan as a land of demons. But as it is the country of the gods, which tries sects, they appear to keep to the temple of their [Buddhist] sect, mix with other people, and in their hearts they neither receive nor give (*Fujiu-fuze*) and have no connection with the temple of their [Buddhist] sect. These must therefore be examined.

8.

Although the parents for generations past may have belonged without the slightest doubt to one of the eight or nine [Buddhist] sects, it is impossible to be sure that the children may not have in their hearts been persuaded to join the evil law. The temple of the [Buddhist] sect to which they belong must examine them.

9.

The Law of Buddha must be promoted by preaching and expounding, and people made to visit the temples; they must be induced to perform their duty in the way of contributing to the parish expenses, for the temple services, repairs and building. Those who belong to an evil law or an evil sect, do nothing for the temple. They associate but little with others, and in their secret hearts break the law of Buddha, disregarding the exhortations of the priests. Wherefore examination must be made.

10.

After death the corpse's head is shaved and a postumous name conferred. The chief priest of the [Buddhist] sect must inspect the corpse and after ascertaining that it did not belong to the evil sect, pronounce the benediction. Examination must be carefully made.

11.

Particular care must be taken to investigate any case in which a person passes over the temple of his own sect, asks a priest of some other temple to perform the funeral rites, and sends away the chief priest of his own temple. Examination must be carefully made for the evil sects, and the evil law.

12.

To every person in the Empire who clearly follows the true law a sect-certificate, authenticated by a seal, shall be given. *Samurai* shall put their seal in the certificate registry of the temple to which they belong. Those who cannot make a seal with blood shall send in a certificate attested by a guarantee.

13.

It is strictly forbidden to transfer the obsequies of ancestors to another temple, and have services performed there. But this does not apply in cases where the death has taken place in a different town or province (from the residence of the successor). The family altars, the images and painted Buddhas and offerings must be carefully looked to. And every year, when the priest makes his rounds at Bon time, he must examine the family altars of those who belong to his sect.

14.

When a person dies, the directions of the sect-temple must be followed in everything.

15.

The enemies of the Empire and the object of the people's hostility are Kirishitan, *Fujiu-fuze* and the Hiden-sect. When any relatives of a Bateren die, information must be given to the Eclesiastical office, who will order an inquest, and the priest of the sect to which the deceased has belonged shall conduct the funeral. If the funeral is celebrated before notice is given to the office, the priest will be held responsible. Careful inquiry must be made. The parish priest must on no account unreasonably demand a greater contribution that is suited to his parishioner's means. The true law is that men shall honour Buddha's law and the law of the

9. The Buddhists affect to make this distinction between their scriptures and the writings of the philosophers.

10. Iriratna, i.e. Buddha, the Law and the Priesthood. See Eitel's Handbook of China, Buddhism, s.v.

11. Is *Hiden* a corruption of the word Heathen? We may easily account for its use by supposing Will Adams to have taught the Japanese to apply it to the Roman Catholic faith.

sovereign with perfect faith. If a single one of these fifteen articles be disobeyed, the culprit shall be subject to divine punishment from Bonten Taishaku,[12] the Four Great Heavenly Kings,[13] the Dark Officers of the Five Hells, Tenshô-Daijin-Gû of Isé in Japan, Hachiman Daibosatsu, Kasuga Daimiôjin, also of his patron-god, and of all the gods of the sixty and odd provinces of Japan.

M. Pagés mentions several edicts directed against Christianity which followed this of Iyeyasu, but I have not yet been able to discover the originals of them all. The edict of 1635 of which he gives a translation under the number 116 in the volume of appendices to his History appears to have differed little from one contained in the *Nagasaki Onyaku sho-dome*, dated 1652. In 1641 was published an edict prohibiting missionaries from landing in Japan, Japanese from visiting foreign countries, and the sale of arms to foreigners. This seems a repetition of the edict of Iyemitsu on his succession to the Shôgunate in 1623 (Pagés. p. 546). In 1654 a circular was issued to the daimiôs, instructing them that all foreign vessels which might put into Japanese harbours, with the object of negotiating, should be referred to Nagasaki, whence they were to be sent home. If they fired, efforts were to be made to sink them, but they were not to be pursued even in that case, if a favourable breeze enabled them to escape from the harbour.

The year 1655 produced a renewal of the proclamation by which rewards were offered for the discovery of missionaries and converts. It runs as follows:—

"Although the Kirishitan sect has been repeatedly prohibited, yet at every change of ruler it is right to issue a decree that rigid scrutiny must be made without cessation. Of course every suspicious person must be informed against.

Formerly 200 pieces of silver very given to one who denounced a Father (Bateren) and 100 pieces to him who denounced a Brother (Iruman). Henceforward the following rewards will be given:

To the denouncer of a Father ..... 300 pieces of silver.
" denouncer of a Brother ..... 200 " "
" denouncer or of a harbourer or of a member of the sect..... 50 " "

If concealment be practised, and the fact be discovered through some other channel, the other members of the offender's company-of-five will be considered guilty of an offence. This is therefore notified."

This decree was repeated in 1658, 1661, 1664, 1671, 1678 and 1682 in nearly the same terms. In 1711 the rewards above enumerated were increased to 500 pieces for a Father, 300 for a Brother, 100 for a harbourer or member of "the sect," and a further reward of 300 offered for the discovery of persons, who after apostatizing from Christianity, had been re-converted. Harbourers or converts who turned evidence against missionaries or their own class were to receive 500 pieces, according to to the value of their information, and in case of concealment punishment was likewise threatened against the mayor of the village, the other members of the company-of-five to which the person guilty of concealment belonged and against his relations. These edicts might still be seen on the public notice boards in every village up to the year 1868.

The means of detecting Christians were various. Mention is frequently made by foreign writers of the *E-fumi*, which consisted in making the person trample under foot a portrait of Christ, and Japanese documentary sources of information confirm the story. I find it spoken of in the "Art of Interrogating" contained in the *Kerisuto-ki*, in an application for Instructions made by the Governors of Nagasaki to the Council of State in 1658, and in the *Hekija-kuwanken-roku*. It appears that the picture was originally drawn or painted in ink, but in 1669 a Nagasaki artizan "made a casting in copper representing the deity of the Christians" and all the inhabitants of the town were made to trample on it. The *daimios* of the neighbouring provinces likewise obtained the loan of this image from the Governors of Nagasaki, and used it in putting their subjects to the test. Another expedient consisted in turning the Buddhist priests into inquisitors. The regulations attached to Iyeyasu's edict of 1613 direct that every year the priests shall visit their parishioners at the period of the *Bon* feast, in the seventh month, to read prayers, and ascertain that there was no falling away on the part of members of the family; and the result of this examination was consigned to a register, which was eventually sent in to the Eclesiastical commissioners. This practice was also in force, I have been informed, up to the year 1868.

Further, functionaries called *Kirishitan bugiô*, or Commissioners for the detection of Christians were appointed, the earliest of whom was Inouye Chikugo no Kami, whose name appears so frequently in the memoirs. A form of oath was imposed on these commissioners, by which they bound themselves to serve the Shôgun faithfully in this matter, to act with perfect impartiality, unaffected either by considerations of natural affection or by personal enmity, to maintain harmonious relations with their colleagues, and to be perfectly frank and open to the Shôgun when he required any information concerning the progress of their investigations. Two drafts of such oaths are to be found in the *Kerisuto-ki*, dated 1658 and 1662, the latter of which has attached to it the signature of Yasuda Wakasa no Kami, a *hatamoto*.

Besides the measures of domestic police adopted by the Government with the object of suppressing Christianity, they exacted from the representative of the Dutch Trading Company an engagement "not to hold any communication with the Kirishitan Sect, not to bring any missionaries into the country", and to communicate every year "any information concerning the the Kirishitan Sect which it may be desirable for His Highness to hear." This formality appears to have been repeated on several occasions, if not on all, of the Dutch Envoy to Yedo taking leave of the Shôgun. In the Japanese sources I find that Zacharias Wagenaer, Capitan 1659 and 1661, made the declaration, and another occasion was in 1673 (*Kerisuto*, M.S., and *Nagasaki Onyakusho dome*, M.S.).

Similar orders were given to the Chinese who traded at Nagasaki, as early as 1641. The whole crew of any junk in which a missionary should reach Japanese shores, were to be put to death, but pardon and rewards were promised to any of the crew who should turn informer. Carrying letters or messages to Christians was prohibited under pain of severe punishment. The reward for denouncing a Christian who had taken passage in a junk was to be double the sum with which the captain had been bribed to take him on board. This decree was renewed in more distinct language in 1675. It appears that in 1695 there was discovered on board a junk a description of Peking in the Chinese language, which contained an account of the Roman Catholic Cathedral in that capital and some mention of Ricci, the Jesuit missionary. The captain and crew were subjected to a rigid examination, the result of which was that they were found to innocent of evil designs, but the captain was forbidden to trade to Japan for the future.

The measures taken for the detection of Christians were not fruitless. From a return dated 16th of the 6th month of 1658, it appears that a very large number must have been discovered during the preceding twenty years, beginning in 1639 with the arrest of Pedro Cassorei, Martino Shikimi, (both martyrs) Juan (or Syovan) the apostate [14] and another priest not identified.

In each of the following towns 'many' Christians are reported as having been detected.

- ° Sendai
- ° Aidzu
- Nihommatsu
- Nambu (district)
- Shirakawa

} in Ôshiu

- Nobusawa
- Kubota

} in Dewa

- Nikkô
- ° Kiôto
- ° Fushimi
- ° Ôsaka
- ° Sakai
- Shimo-Otawa
- ° Wakayama, in Kishiu
- ° Kanazawa
- Komatsu

} in Kaga

- Hiroshima, in Geishiu
- Tsuyama, in Mimasaka
- Takamatsu, in Sanuki

Omura and
Kumamoto.

Churches or seminaries had formerly existed in all those towns to whose names an asterisk is prefixed in the above list. It is of course impossible to estimate the number of Christians arrested at each of these places, but in the case of Omura they must have amounted to hundreds. The Nagasaki *Ongakusho-dome* [15] (M. S.) contains an entry concerning the manner in which the Christians from that town are to be disposed of. It is therein ordered that ten per hundred be retained in prison, to be used as witnesses in any future trials. Ten are to be assigned to those of the informers who have been most active in hunting up victims. Eighty per cent are to be decapitated. "If" the remaining forty odd," "continues the record, who are entered in the books are found "to be undoubted Christians, they are all to be decapitated, "without further examination of their relations or the in- "formers." But we can hardly suppose that the word 'many' is to be understood in every case to mean hundreds. In the majority of cases a vague indication of the numbers is given, e. g. 3 or 4—7 or 8 and so forth, but adding these together, I find that the Christians arrested during these years in other parts of Japan than the above mentioned, numbered about three hundred and fifty, of whom fifty belonged to the despised classes of beggars *(kojiki)* and pariahs *(eta)*. Of the whole number throughout Japan some seventy or eighty belonged to the *samurai* class. In the following provinces, no arrests were made, Ohosumi, Hiuga, Shima, Kai, Hôki, Tango, Awa, and the island of Oki, to which may be added the province of Satsuma, the only arrest reported from there being of four foreign and one Japanese Bateren, and four persons guilty of harbouring. These were evidently the Jesuit Fathers Rubino, Capece, Mecinski, Moralez and Marquez.[16] In 1661 Kurokawa Yohei, before proceeding to Nagasaki, of which town he was a Governor, asks the Ministers of the Shôgun for instructions as to Christians whose interrogatory had already been commenced by his colleague Tsumagi Hakoyemon. A report to the Council dated 1668 speaks of a hundred and sixty-three suspected Christians who had been in prison for some time, and says that the years 1667 and 1668 must have furnished an additional number of 'several tens' of accused persons. The memorandum annexed to the proclamation against Christianity which was repeated in 1871 speaks of arrests continuing to be made. Okano Magokarô, another Governor of Nagasaki, in 1674 presents an application for instructions concerning the treatment of accused persons, in the course of which he suggests that suspension in the pit should be applied only to those who had been condemned to death, for while some were able to endure it for five or even seven days, weaker constitutions sometimes gave way after an hour or two, and thus frustrated the hope of obtaining evidence from them. By 1686 the few remaining Christians had learnt how to conceal their belief and the practice of their religion so well that the Council issued a circular to the chief *daimios* of the south-west stating that none of the Kirishitan sect had been discovered of late years, owing perhaps to laxness on the part of those whose duty it was to search for them, and enjoining vigilance. I have not found any evidence to show that any suspected persons were arrested later than this year, excepting of course the Abbé Sidotti in 1709, whose history has been made known by the distinguished scholar the Rev. Dr. S. R. Brown, through his translation of Arai Hakuseki's *Seiyô-Kibun*.

Considerable obscurity has hitherto hung over the fate of the last bands of devoted missionaries which sailed from Manila in 1643. Bartoly writing in 1659, Charlevoix in 1735 and more recently M. Leon Pagès, in his admirable History de la Religion Chrétienne au Japon, all state that the five fathers of whom the mission was composed suffered martyrdom; but the fact does not seem to have been ever authenticated by direct evidence. The contrary account, except in the case of a single missionary, is given by a Japanese source.

15. Records of the Nagasaki Office.
16. Vol. V. 105, Part. 8, 2.

The *Kerisuto-ki*, M. S. already quoted furnishes the following information :—

"Twenty-one years ago in the year of the tiger (1638) four were "reported from Sendai, the territory of Matsudaira Mutsu-no-Kami, "in Ôshiu; these were the Japanese *bateren*, Fuhaa Heitaro, Maru- "chiino Ichisaemon, the Namban Bateren, Furanshisuko Magoemon, "Shiyuan Hauchisuda. After the defeat of the Shimabara insur- "rection in the reign of Taiyû-In, the Bateren 巷庵 (Jiuan), "Maru Chiinio Ichizaemon, Kibe Betoro were brought under "arrest from Sendai, and four times brought before the Hiôjôjô, "but their examination was not concluded. Later Sanuki-no- "Kami went to his second mansion (Shimo-yashiki) and the three "Bateren were summoned before him. Takuan[17] Yagiu Tajima- "no-Kami and others assembled, and they put questions con- "cerning the doctrines of the sect. After two or three days "Nakane Iki-no-Kami appeared as High Messenger (from the "Shôgun) and instructed Chikugo-no-Kami that he was not to "produce the above three men at the Hiôjô-sho, but to examine "them by himself.

"The above three bateren were examined during ten days at "Chikugo-no-Kami's on the laws of Kirishitan, and after ten days "Chikugo-no-Kami sent his retainers to the three bateren in "prison, and ordered them to be tortured. They caused 巷庵 "of the Compania and Maruchiyo Ichizaemon to apostatize "*(korobase)* and to repeat the invocation to Buddha. They were "summoned to Chikugo-no-Kami's residence, and allowed to remain "there a year or two, after which time both fell sick and died. "Kibe Beitaro did not apostatize and was put to death by suspen- "sion. The reason of this was that at that time there was want "of skill in inducing apostasy. Two guilty of harbouring, were "suspended in the same pit with Kibe, and therefore persuaded "(? the officials) to kill Kibe. After his death both apostatized. "They were removed from the pit, and placed in prison, where "they lived for many years. Subsequently Franshisuko Magoe- "mon and Berunarutou Ichizaemon, two Namban Bateren, were "arrested by the authorities. Both of them were *Furate*. They "were frequently examined at the residence of Chikugo no kami, "but as the procedure was still unskilful they could not be brought "to apostatize, and were condemned to be burnt to death in "Shiba.

"In the year of the horse (1643) [were arrested] in Chikuzen "Heitoro, Furanshisu, Aronso, Chiyoseifu, all of them Namban "Bateren, and one Iruman. This man was a native of Mogi, near "Nagasaki, who had gone abroad, and become an Iruman. Be- "sides five guilty of harbouring. These were arrested by a China- "man in the time of Chikugo no Kami, and delivered up. Being "sent to Nagasaki they were cast into prison, and in the follow- "ing year all ten were summoned from Nagasaki to Yedo, "where they were handed over to Chikugo no Kami, who "subjected them to a searching examination. After being "put to the torture all four twice apostatized, repeated the "invocation to Buddha, and signed a declaration that there "was no deception in their apostacy. The Iruman and "harbourers apostatized before the Bateren, one or two at a "time, and joined Japanese sects. A prison was constructed in- "side Chikugo no kami's mansion, in which the four Bateren were "confined. They were frequently summoned before him and "examined repeatedly as to the designs harboured in Namban and "Luçon, whence the Bateren were sent to Japan, and as to the "Kirishitan law. Makino Sado no kami, Kuze Yamato no kami,[18] "and others used to visit Inouye Chikugo no kami, and put ques- "tions to which the replies were given. Subsequently Aronso "recanted, in consequence of which he was placed in the "wo- "man's godown, where he fell sick and died, after having con- "tinued to live during twenty days. In order to die by a "sort of suicide called *zeziun*, it is said to be the rule to eat very "little, so that the body becomes weaker and death ensues. He "did so, and thus came to his end. Franshisu having been impri- "soned with a woman, became friendly 'with her, and confessed. "They were exhibited to the inmates of the prison, and the latter "were commanded to witness this rare event, the marriage of a "Bateren. After the couple had been made to exchange the matri- "monial cup, they were removed to Chikugo no kami's residence, "where they passed the rest of their lives. Peitoro, Chiyoseifu, the "Iruman, with persons guilty of harbouring and members of the "sect to the number of twenty, were placed in the charge of Chi- "kugo no kami, alterations being made for that purpose at the "mansion in Kobinata. Chiyoseifu took the name of Sanyemon, "and a wife was given to him. He is still alive. Peitoro fell ill and "died on the first day of the third moon of the third year of Mei- "reki (1657). They signed a declaration ackowledging that the "Namban Bateren had recanted and used the invocation to Buddha, "and gave it in to the authorities."

"It is said that during the century or so which elapsed from the "arrival of the Bateren Maruseiro at Yamaguchi in Suevô, whence "he passed into Bungo and persuaded the Ôtomo who dwelt there "to become Christians, one hundred and five Bateren came to "Japan It is stated too that not only the Namban Bateren but "the Japanese Bateren, after being examined as to the merits of "their sect, were all tortured into repeating the invocation to "Buddha, made to seal a declaration and obliged to recant. Chi- "kugo no kami was the first to accomplish this. Seven men's "allowance of rice was granted to those who had been guilty of "harbouring [and pardoned], ten men's allowance to the Bateren, "and a thousand *momme* in silver. They were all kept inside a "stone wall, and frequently subjected to interrogation; and it was

"ordered that if they did not say that Namban had designs upon "Japan, they were to be tortured."

The names contained in these extracts are transliterated without alteration from the Japanese, but most of them can be identified without difficulty. Fuhaa Heitoro and and Kibe Betoro or Beitoro are evidently one and the same person, namely the Japanese Jesuit P. Cassui Pietro (Bartoli, Il Giappone lib. V. p. 174; Charlevoix VII, p. 179), whom M. Pagès mentions also in his work already cited, 1ere partie p. 850. Maruchiino Ichisaemon is probably the same person as the Padre Schichini Martino mentioned by Bartoli, (ib. p. 195) Charlevoix (ib. p. 180), and by M. Pagès, (p. 873). I find nothing in either Bartoli, Charlevoix or M. Pagès which would serve as a clue by which to identify the foreign priest here called Furanshisuko Magoemon. Shiyuan Hauchisuda is apparently the same as 養庵 (Jiyuan=Juan or Joao) mentioned in the second extract. This man is said to have been a native of Canton, and his death took place at Yedo in 1697 at the age of eighty. He was buried at a Buddhist temple called Muriô-In in the suburb of Keishikawa, outside the northern moat of the castle. He appears to have been a Jesuit father, probably the same whom Schaep calls Siovan and takes for a Spaniard[19].

Berunaruton (Bernardo) Ichizaemon is also not mentioned by either of the three historians of the church. He and Francisco Magoemon are said to have been Frate, by which is probably meant not lay-brothers, but members of one of the orders which according to Japanese accounts had taken the north and east of Japan for the field of their operations, leaving the western part to the Jesuits.

The five who are said to have been arrested in Chikuzen are easily identified as the Jesuits fathers Pedro Marquez, Francisco Cassola, Giuseppe Chiara, Alfonso Arroio (or Alonso Arroyo) and the Japanese Brother Andrea (Bartoli, op. cit. p. 196, Pagès, 878). Charlevoix (VII, p. 182) places the port of their disembarkation somewhere in the Loochoo group.

Tout ce qu'on a scu de plus certain de leur expedition, c'est qu'ayant débarqué aux Isles Lequios, *qui* dépendoient des lois du Roi de Saxuma, ils y furent Saisis, et menéz a Jedo par ordre de l'Empereur, qui leur fit scier les membres; que trois moururent sur le champ, et que les deux autres furent reportez en prison, où il y a bieu de l'apparence qu'ils ne vécurent pas longtems. Nous n'avons, pour fixer le tems de leur Martyre, que ce qu' en est rapporté dans un Journal des Hollandois, à l'occasion d'une avanture fort triste, qui arriva à un Navire de cette Nation.

Mr. Pagès says that they "had arrived in the north of Japan," but I do not know on what authority he makes this statement. Probably there is some confusion here between the case of Schaep who was arrested in Nambu, and who is mentioned by M. Pagès in the same paragragh with the five Jesuits, and the case of the latter. Montanus, in speaking of the meeting between Schaeps and his companions with four Portuguese priests (namely the four Jesuit fathers above-named) at Yedo, says that they had been brought from Nagasaki (Engl. edit. of 1670, p. 332). And the statement in the *Kerisuto-ki* that they were arrested in Chikuzen is corroborated by the *Hekija Kuwan-ken roku* (vol. I, p. 22 v.)

This discrepancy between the accounts given by Bartoli and in the *Kerisuto-ki* is great. The former says: "And whoever shall "have to describe how they were sawn while alive, as was actually "done to them in a public street in Yedo, after having undergone "other tortures, and how they were reconducted, half dead, to their "prison, the death of three of them there, and the end of the other "two, who were kept alive, but in a more dangerous kind of death, "because the Shôgun in the meanwhile had a daughter born to him "will have to distinguish the real truth from the falsehoods which "the Dutch Heretics have mixed up with it in their journals." Charlevoix seems to have followed Bartoli. On the other hand Mr. Pagès says, *loc. cit.* that the Captain and crew of the Breskens were present at the examination and torturing of the five Jesuits, three of whom died on the spot, while the other two were carried back to prison where they died shortly afterwards. Montanus, in telling the story of Schaep and his companions, nowhere says that they were actually present at the torturing. On one occasion "being "carried into the Place of Audience, they were commanded to sit "down on Mats by four *Jesuits*, who looked exceeding pitifully; "their Eyes and Cheeks strangely fallen in; their Hands black "and blew; and their whole Bodies sadly misus'd and macerated "by Torture. This Company amaz'd the *Hollanders*, who were "not able to judge the Reason of their being placed by the four "*Jesuits*."

"These though they had Apostatiz'd from the *Christian* Faith "yet declar'd publickly to the Interpreters *Kytsbyoye* and *Phat-*"*syosamon*, that they did not freely Apostatize: but the insuffer-"able torments which had been inflicted upon them. had forc'd "them to it."[20] This corroborates very closely the account in the *Kerisuto-ki*. The Hollanders were subsequently told by the servants of the House where they lodged, that "two of the four *Romish* "priests had recanted their denying of the *Christian* Faith to the "embrace the *Japan Religion*."[21] This was merely hearsay evidence, but from its very nature, as being more to the credit of the tortured prisoners than to that of their judges, is likely enough to be true, and corresponds nearly to the statement in the *Kerisuto-ki* that Alonso Arroyo recanted.

In the memorandum concerning the examination of the Jesuits signed by Inouye Chikugo-no-kami, dated the 8th day of the 9th month of the year 1643, which allowing for the difference of the Japanese and European calendars would correspond to some day in October, they are stated to have confessed that "there were "four Japanese Bateren in Luçon, one of whom was related to "Kagayama Hayato a native of Buzen, who some years previous-"ly had been condemned to be burnt. They had been told in "Luçon that the Bateren, his relative, was to be sent to Japan. They "had also been told that Namban Bateren was to cross over "to Japan in the following year. Besides these, they had "heard that two Japanese children were to be educated as Bateren, "in order to be sent over to Japan. It was commonly reported "that in this way a large number of Bateren were to be "brought up in various countries, to be sent to Japan in a con-"tinuous stream[22]."

With this may be compared the following extract from Montanus, wherein the only difference is the supposed intention of sending the four Jesuits to Batavia.

"After that, the Hollanders understood from *Phatsyo-saymon* "and their Landlord's Sons, that the Emperor kept the four *Jesuits* "in Prison, till *Elseraks* coming thither, (two of these four were "*Italians*, the third a *Castilian*, and the fourth a *Portugal*) that "by him they might be carry'd over to *Batavia*: So escaping "with their lives from a terrible Death, because they stagger'd "in their Religion, and discover'd a secret, at which the *Japan* "Emperor seem'd to be highly concern'd; the Plot was, that let "it cost what it would, Money and Blood, the *Jesuits* would "anew undertake their ancient design in *Japan*: It was absolutely "concluded, yearly to send *Roman* priests to Japan from the "*Manilla's*, and in short time two Native *Japanners* should be "sent thither, and be receiv'd in the *Jesuits* Orders, by which "means they promis'd great matters to themselves, because they "not only understood the *Japan* tongue exceedingly well, but "were of the same Nature and Disposition of their Countrymen, "and therefore might be more private from the common Persecu-"tions being less suspected than Out-landish Priests. By this "means they thought for time to come, to play their game, and "the more, because the *Christians* in all places, as if they arose "out of the Ashes of the Martyrs, began to Live afresh. So that "the Emperor was puzzled, seeing no small danger to threaten "his Crown; wherefore, he contrary to all those that had been his "Predecessors, was at the Examination of *Christian* Prisoners, or "*Portugal* Priests himself, out of meer fear of an Insurrection."

In consequence of the belief entertained by the Shôgun's government that such a design was actually entertained by the Roman Catholics interested in missions, orders were issued in 1656, thirteen years later, 'that strict vigilance must to be practised to pre-'vent any "Bateren" from finding his way into the country. Suf-'ficient time had elapsed for the children who were believed to 'have been sent some years back to Namban to be educated as 'priests, to have reached an age at which the project could 'be carried out. The execution of the plan would no doubt be 'facilitated by their being able to pass themselves off as native 'Japanese, by manners, dress and clothing. Punishment was 'therefore threatened against any one, who knowing of 'the arrival of a foreign vessel should neglect to give in-'formation; his whole family and the inhabitants of the same 'locality would be involved in his offence[24].'

It remains to trace the history of the three Jesuits who according to the *Kerisuto-ki* did not recant their denial of Christianity. Francisco Cassola married a Japanese wife, and lived many years in Chikugo-no-Kami's mansion, but the date of his death is not mentioned therein. Father Pedro Marquez died in 1657. Giuseppe Chiara received the name and swords of Okamato Sanyemon, a criminal who had suffered capital punishment. He was married to a Japanese woman of Misaki in Idzu, who is said to have been previously the wife of a criminal condemned to death. A man servant and a maid were also placed at his disposal. He resided for some forty years in the *yama yashiki*, and dying in 1685 at the age of eighty-four was buried at the temple of Muriô-In, in the

suburb of Koyshikawa behind Dendzu-In. Brother Andrea Vieyra, who was arrested together with the four Jesuits fathers, took the name of Nampo. He died in 1678, and was likewise buried at the temple of Murió-In.

Mention is also made in the *Keriuto-ki* of a Sicilian of Palermo who was arrested in June 1643 at Yakiu island in Chikuzen. On being examined, he confessed that he had come to Japan for the purpose of teaching Christianity. He was handed over to Yamazaki Gompachirô, the Governor of Nagasaki, and sent to Yedo where he arrived on the 13th of the 7th month. He was placed in charge of Inouye Chikugo no kami, the commissioner for trying Christians (*Kirishitan Bugiô*), by whom he was frequently examined, and it is to be inferred, eventually induced to deny his creed, since he was transferred to the *yashiki* where Giuseppe Chiara and Br. Andrea Vieyra were confined and received an annual allowance of a thousand *mommé* of silver (60 *mommé*= one tael), and ten men's allowance of rice (five *shô* or nearly two bushels per diem). Lastly, among the inmates of the *Kirishitan yashiki*, as it was popularly called, was an Anamite Christian named *Jikuan*, who died in 1700 at the age of seventy-eight, and was buried at Murio-In like the rest.

YOKOHAMA RACE CLUB.

AUTUMN MEETING.

First Day.

Wednesday, 7th November, 1877.

More charming weather could not be imagined than that which favoured the Race Club yesterday. It was.

"One of those heavenly days which cannot die,"

and to this fact must be attributed, in no slight measure, the pleasure which many of the spectators took in the day's sports. Thanks to the unfortunate schism which exists among racing men here the entries were by no means so good as formerly, and the interest which the public used to take in the race meeting has correspondingly fallen off, as shown by the small attendance within and without the Grand Stand enclosure. Indeed, when the first race started there were hardly more spectators present than used to assemble at the early morning training in days of yore. Several ladies appeared on the Grand Stand, and the band of the *Tennessee*, kindly lent by Admiral Patterson and the officers of that vessel, was in attendance. The course was in excellent order, the result being that good time was made in some of the races. We cannot too highly commend the promptitude with which the ponies were sent out for the several events, so that the tedious delays so generally experienced at race meetings were conspicuous by their absence. We trust the good example set yesterday will be closely followed hereafter.

1.—The Trial Plate.—For China Ponies that have never won a flat race here up to date of entry. Weight for inches. Entrance, $5. Once round.

Mr. Osborn's *Grey Friar*, 10st. 5lbs. 1
„ Stevens' *Satisfaction*, 10st 5lbs. 2
„ Fritz's *Wilhelm Tell*, 10st. 5lbs. 3

For this first event there were but three ponies entered, all of which appeared at the post. The race was rightly looked upon as a certainty for *Grey Friar*, and he took the lead immediately the flag fell and was never headed. On ascending the hill *Grey Friar* ran away several lengths from the other two, and was only approached by *Satisfaction* on nearing the half mile, but the result was never in doubt, and the winner, ridden by his owner Mr. Osborn, cantered in hard held. Time 2 min., 19½ secs.

2.—The Griffins' Plate.—A sweepstake with $50 added. For Japan Ponies, *bonâ fide* Griffins. Weight for inches. Entrance, $10. Five Furlongs.

Mr. J. Peel's *Ichi Roku*, 10st. 6lbs. 1
„ Fritz's *Fleur de Lys*, 10st. 4lbs. 2

The two kept together till the half mile was nearly reached when *Ichi Roku* took the lead, which he increased without much effort after passing the trees and won as he liked, ridden by Mr. Osborn. Time 1 min., 23½ secs.

3.—The Challenge Cup.—Value, $250. For China Ponies. Weight for inches. Entrance, $5. One mile and a half. To be won at two consecutive meetings by the same stable.

Mr. Morrison's *Tallapoosa*, 10st. 8lbs.... ... 1
„ Fritz's *Don Carlos*, 10st. 5lbs. 2

Don Carlos had not the shadow of a chance against *Tallapoosa*, though Mr. Marlborough, the rider of the latter, evidently wished to delude the *Don's* jockey into imagining that he had, and while the "Tartan" pony only won by a length, the wretchedly slow time, 3 min., 50 secs., will show what sort of a race it was permitted to be.

4.—The Cathay Cup.—For China Ponies; winners of two or more races under one mile last Spring, 10lbs. extra; winner of one race under one mile last Spring, 7lbs. extra. Weight for inches. Entrance, $5. Half a mile.

Mr. Osborn's *Grey Friar*, 10st. 5lbs. 1
„ Mason's *Liddesdale*, 11st. 4lbs. 2
„ Morrison's *Mavis*, 11st. 4lbs. 3
„ Savile Stuart's *Not Proven*, 10st. 8lbs. ... 0

There was much delay occasioned at the post by the fractiousness of *Liddesdale*. When a start was at length effected *Grey Friar* jumped off with the lead, with *Mavis* second, *Liddesdale* being at some disadvantage by the loss of several lengths when the flag fell, which, however, he speedily made up, ran second to *Grey Friar* after passing the quarter mile, and pressed him hard on entering the straight, but thanks perhaps, to the extra weight, *Grey Friar* beat off his opponent easily, and, ridden by his owner, won by about three lengths in the good time of 61 seconds. There was, unfortunately, some mistake about the declaration of *Faust*, by which that pony was debarred from going out, and thereby probably lost a good chance of a win.

5.—The Britannia Cup.—For China Ponies; winners of six races in Yokohama in 1876 and 1877 excluded; winners of three or more races, 7lbs. extra. Weight for inches. Entrance, $5. One mile.

Mr. J. Peel's *Bonny Doon*, 10st. 8lbs... ... 1
„ Morrison's *Hoolet*, 11st. 1lbs. 2

This was a splendid match between the above two cracks. *Bonny Doon* led off and increased his distance from *Hoolet* ascending the hill, but the gap was decreased at the five furlongs, and after passing the half mile the "Tartan" pony drew up to *Bonny Doon's* quarters. Despite the efforts of his jockey this position could not be improved, and a capital race down the straight only demonstrated the superiority of the "Blue and Silver," as *Bonny Doon*, ridden by Mr. Osborn, finished an exciting race two lengths ahead of *Hoolet*. The time was by far the best ever done on this course for the distance, viz., 2 min., 10 secs.; the first quarter having been done in 31 secs., the half mile in 63½ secs., and the three-quarters in 1 min., 37 secs.

6.—The Cosmopolitan Cup.—For all Ponies. Weight as per scale. Entrance, $5. Three-quarters of a mile.

Mr. Morrison's *Braemar*, 10st. 8lbs. 1
„ Savile's *Crusader*, 10st. 5lbs. 2
„ Morrison's *Lintie*, 10st. 2lbs. 3

Mr. Morrison had declared to win with *Braemar*. *Crusader* started off with the lead, being followed by *Lintie*, but *Braemar* was not long before he took second place, and at the trees drew level with *Crusader*, from which point they raced in neck and neck, *Braemar* ridden by Mr. Marlborough, eventually winning by half a length. Time, 1 min, 39½ secs.

7.—The Autumn Plate.—For Japan Ponies. Winner of No. 2, 10lbs. extra. Weight for inches. Entrance, $5. Three-quarters of a mile.

Mr. J. Peel's *Annandale*, 10st. 6lbs. 1
„ Morrison's *Distemper*, 10st. 6lbs. 2
„ Marlborough's *Typhoon*, 10st. 4lbs. ... 3
„ Fritz's *Fleur de Lys*, 10st. 4lbs. 0
„ Morrison's *Disinfectant*, 10st. 2lbs... ... 0
„ Pringle's *Planet*, 10st. 6lbs. 0

Of the seven entries six ponies appeared at the post. Several false starts occurred before they were got away, when the two "Tartans" took the lead, *Annandale* being last. *Typhoon* soon made his way to the front, and was leading at the half mile, but at the trees was deposed by *Annandale* who had run past the other ponies. Here *Planet*, being sulky, shut up and tailed off with *Fleur de Lys*. On entering the straight the ponies ran all over the course and the race was anyone's, *Annandale* securing it by half a length, with *Distemper* and *Typhoon* on the outside rail closely disputing the second place. The winner was ridden by Mr. Urquhart. Time 1 min., 43 secs.

8.—The Club Cup.—A sweepstake with $50 added. For China Ponies that have run as Griffins in Japan last Spring; winners at this meeting excluded. Weight for inches. Entrance, $10. One mile and a quarter.

Mr. Mason's *Liddesdale*, 10st. 11lbs. 1
„ Savile Stuart's *Talisman*, 10st 5lbs. ... 2
„ Steven's *Satisfaction*, 10st. 5lbs. 3
„ Fritz's *Don Carlos*, 10st. 5lbs. 0

On passing the stand *Liddesdale* was leading by three lengths, being followed by *Don Carlos* and *Satisfaction*, with

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Talisman lying well behind. On ascending the hill *Liddesdale* greatly increased his lead, and the immense gap between him and the other ponies was maintained to the half mile, where *Talisman*, who had been set going, closed up and at the trees challenged the leader, but even with the advantage of weight could not succeed in heading *Liddesdale*, for during the run in Mr. Urquhart called upon his pony, who answered at once, and coming away won by a length in 3 min. The good fortune of Mr. Mason, who has for years been an ardent but unsuccessful supporter of the turf, was received with demonstrations of satisfaction, though some of them took a form which may not have been altogether a pleasure to the noble owner.

SECOND DAY.

Thursday, 8th November.

The Club was not only fortunate again in the weather, but there was a marked improvement in the attendance within the enclosure and of the natives outside. Many more ladies were present than on the previous day, and during the afternoon H. Ex. Okuma and Mr. Matsukata, the Minister and Vice-Minister of Finance, paid a visit to the Grand Stand. The band of the *Tennessee* was again in attendance and played through an excellent programme.

1.—THE CELESTIAL CUP.—Value, $150. Presented. For China Ponies. All winners of two races in Japan excluded. Weight for inches. Entrance, $5. Once round.

Mr. P. Kells' *Vandal*, 10st. 5lbs. 1
„ Savile Stuart's *Not Proven*, 10st. 8lbs. ... 2
„ Fritz's *Wilhelm Tell*, 10st. 5lbs. 3

All got off together, *Vandal* taking a lead almost immediately, which he increased going up the hill. At the five furlongs *Wilhelm Tell* was done and the race lay between the other two, though the way in which *Vandal* gradually improved the advantage he had, showed that *Not Proven* was unequal to the task before him. Mr. Williams on *Vandal* had it entirely his own way, and won with ease by three lengths. Time, 2 min., 17½ secs.

2.—THE MITSU BISHI CHALLENGE CUP.—Value, $200. Presented by the Mitsu Bishi Company. For Japan Ponies. To be won at two consecutive meetings by the same stable. To be held in the meantime by the last owner. Weight for inches. Entrance, $5. Once round and a distance. (Last winner, Mr. Don Carlos' *Kickapoo*.

Mr. Morrison's *Distemper*, 10st. 6lbs. 1
„ Pringle's *Planet*, 10st. 6lbs. 2
„ J. Peel's *Ichi Roku*, 10st. 6lbs. 3
„ Marlborough's *Typhoon*, 10st. 2lbs. ... 0
„ J. Peel's *Annandale*, 10st. 6lbs. 0

All the ponies entered faced the starter, it being impossible to say which among them was the favourite, so that a good race was anticipated; nor did the result disappoint expectations. When the flag fell *Planet* jumped off with the lead, followed by *Annandale*, *Typhoon*, *Ichi Roku* and *Distemper*. At the bottom of the dip *Typhoon* fell behind, while all the ponies ascended the hill in Indian file, still headed by *Planet*. At the five furlongs the second pony drew up, and the others gradually lessened the distance which separated them from the leaders, so that at the trees all were together. On entering the straight *Ichi Roku* unfortunately ran wide and destroyed his chance, while the rest came pounding along together, very free work being made with whip and spur by all the jocks. *Planet* contrived to keep slightly in advance of the others, but *Distemper*, who had wrested second place from *Amandale*, came dangerously near and eventually succeeded, through the strenuous efforts of his rider Mr. Savile, in cleverly winning by a neck just on the post. In the mean time *Ichi Roku* secured third place with such an extraordinary rush along the outside rail, as showed that had he but run straight the race would have been his. This was a really excellent race. Time 2 min., 41 secs.

3.—THE COMMUNITY CUP.—Value, $200. For all Ponies; Japan, 10st., China, 11st. Winners at the meeting, 7lbs. extra. Entrance, $5. Five furlongs. To be won at two consecutive meetings by the same stable.

Mr. Morrison's *Braemar*, 11st. 7lbs. 1
„ Mason's *Liddesdale*, 11st. 7lbs. 2
„ Morrison's *Mavis*, 11st. 3
„ Savile Stuart's *Talisman*, 11st. 0

Liddesdale had the best of the start but was closely followed by *Mavis*, who forced the pace. At the trees *Braemar* closed up, and after entering the straight drew level with *Liddesdale* and raced neck and neck with him to the distance, where the "Tartan" pony came away when called upon and won by a length. Mr. Marlborough rode *Braemar*, Mr. Morrison having declared the best to win. Time 1 min., 20½ secs.

4.—THE MAIDEN STAKES.—For Japan Ponies that have never won a race. Weight for inches. Entrance, $5. Half a mile.

Mr. Fritz's *Fleur de Lys*, 10st. 4lbs. 1
„ Mason's *Silverspring*, 10st. 8lbs. 2
„ Stevens' *Exile*, 10st. 4lbs. 3

Exile and *Fleur de Lys* apparently had this between them, the former being the favourite, but as he bolted badly at the turn he put himself out of the race. *Fleur de Lys* also ran wide, which gave *Silverspring* a chance which his rider did not fail to take advantage of, and a good race was made down the straight, *Fleur de Lys*' jockey, Colonel Forrester, succeeding in landing him a winner by a length. Time 65½ secs.

5.—THE VISITORS' CUP.—For China Ponies. Winners in Japan in 1877 of any race under a mile excluded. Weight for inches. Entrance, $5. Three-quarters of a mile.

Mr. J. Peel's *Bonny Doon*, 10st. 8lbs... ... 1
„ Morrison's *Tallapoosa*, 10st. 8lbs... ... 2
„ Fritz's *Faust*, 10st. 5lbs. 3

Although *Faust* went to the post this was virtually a match between *Bonny Doon* and *Tallapoosa*, the former being the favourite. *Bonny Doon* at once showed in front when the flag fell, and though pressed hard by his opponent at the trees, never conceded the lead, but increased his advantage down the straight and, ridden by Mr. Osborn, won in a canter with plenty to spare. Time, 1 min., 38 secs.

6.—THE OWNERS' CUP.—For China Ponies; non-starters and winners at the meeting excluded. Weight for inches. Entrance, $5. Once round.

Mr. Morrison's *Lintie*, 10st. 2lbs. 1
„ Savile's *Crusader*, 10st. 5lbs. 2

Only two ponies faced the starter. *Lintie* took the lead at once and kept it throughout, winning by a good length in 2 min., 16½ secs., Mr. Marlborough being up.

7.—THE LOTTERY CUP.—For Japan Ponies; non-starters and winners at the meeting excluded. Weight for inches. Entrance, $5. Five furlongs.

Mr. Stevens' *Exile*, 10st. 4lbs. 1
„ Pringle's *Planet*, 10st. 6lbs. 2
„ Morrison's *Disinfectant*, 10st. 2lbs. ... 0
„ Marlborough's *Typhoon*, 10st. 2lbs. ... 0

Planet as usual jumped off with the lead, with *Typhoon* close by. *Exile* had rather the worst of the start but soon picked up, and all four were well together on entering the straight, coming down which *Planet* and *Exile* singled themselves out for a struggle together, and the race seemed to be the former's, but *Exile's* rider, Mr. Williams, lifted his pony in and won a well contested race on the post by half a length. Time 1 min., 21¾ secs.

8.—THE CHINA CRITERION STAKES.—First Pony, $100. Second Pony, $25. For China Ponies. A forced entry for all Ponies that have run at this meeting. Winners of one race 10lbs., of two races 14lbs. extra. Ponies that have run twice and have not been placed allowed 7lbs. Weight for inches. Entrance, $5. One mile and a quarter.

Mr. Morrison's *Hoolet*, 10st. 8lbs. 1
„ Savile Stuart's *Not Proven*, 10st. 8lbs. ... 2
„ do. *Talisman*, 10st. 5lbs. ... 3
„ Fritz's *Wilhelm Tell*, 10st. 5lbs. 0
„ do. *Don Carlos*, 10st. 5lbs. 0

One false start occurred and then the ponies got away to a wretched one, *Not Proven* at once taking a very decided lead, which he held past the stand and increased by many lengths on ascending the hill. *Hoolet*, who was the favourite, was second, the others being spread over the course, *Faust* bringing up the rear a long way off the leader. At the trees *Hoolet* and *Talisman* closed up, and the three entered the straight together, but when *Hoolet* was really let out he went to the front at once and won without apparent effort, being ridden by Mr. Marlborough. Time, 2 min., 59 secs.

9.—THE NIPPON CRITERION STAKES.—First Pony, $100. Second Pony, $25. For Japan Ponies. A forced entry for all Ponies that have run at this meeting. Winners of one race 7lbs., winners of two races 10lbs. extra. Ponies that have run twice and have not been placed allowed 5lbs., Weight for inches. Entrance, $5. Three-quarters of a mile.

Mr. Morrison's *Distemper*, 10st. 13lbs.... ... 1
„ Pringle's *Planet*, 10st. 6lbs... 2
„ J. Peel's *Ichi Roku*, 10st. 13lbs. 3

Ichi Roku went off with the lead, having *Planet* in close attendance, but *Distemper* shortly closed up and at the quarter mile was ahead. On entering the straight *Ichi Roku* bolted as usual, while *Distemper*, guided by Mr. Marlborough, went on by himself

"Nor cast one longing, lingering look behind"

to *Planet*, who was making a desperate effort to catch him down the straight. The "Tartan" won by several lengths in 1 min., 42 secs.

THIRD DAY.

Friday, 9th November.

Again was the Club as highly favoured as regards weather as on the two previous days, and although the fair sex was not as numerously represented in the Grand Stand, the general attendance within and without the enclosure was better. The band of the *Tennessee* again discoursed most excellent music.

1.—THE HURDLE RACE.—Value, $75. For all Ponies; over six hurdles; China Ponies, 10st 7lbs.; Japan Ponies, 10st. Entrance, $5. Once round and a distance.

Mr. Mason's *Liddesdale*, 10st. 7lbs. 1
„ J. Peel's *Annandale*, 10st. 0lbs. 2
„ Steven's *Satisfaction*, 10st. 7lbs... ... 3
Col. Forrester's *Doncaster*, 10st. 7lbs... ... 0

All four ponies went over the first hurdle close together, *Satisfaction* leading, but *Liddesdale* made a rush to the front going up the hill, closely followed by *Satisfaction*, *Annandale* being third and *Doncaster* last. In this order they took hurdle after hurdle, no baulk whatever occurring, but all the ponies jumping clean and well. *Annandale* was kept back until nearing the last hurdle, when he was let out and joined the leaders, and all three took the last jump together. The run in was a close and exciting race between *Liddesdale* and *Annandale*, but the superior turn of speed of the China pony told, and, with Mr. Urquhart up, he won the best hurdle race ever run on this course by a head. Time 2 min., 43 secs.

2.—THE MERCHANTS' CUP.—A handicap for all China Pony winners at the meeting. To be handicapped by the Stewards at the close of the second day's racing. Entrance, $5. Compulsory. Open also to beaten Ponies at the meeting. One mile and a quarter.

Mr. Morrison's *Hoo'et*, 11. 4lbs. 1
„ J. Peel's *Bonny Doon*, 11st. 10lbs.. .. 2
„ P. Kells' *Vandal*, 10st. 8lbs. 3
„ Savile's *Crusader*, 10st. 7lbs. 0

Bonny Doon and *Hoolet* led together past the stand, with *Crusader* third and *Vandal* lying last, this order being maintained up the hill, but a wide gap separating the leaders from the other two. At the five furlongs *Hoolet* went to the front, and *Vandal* took third place though still several lengths behind. *Bonny Doon* drew level again at the half mile, whence the two raced neck and neck to the turn, but after entering the straight *Hoolet* responded to his rider's call and left his opponent behind. *Bonny Doon* made a most gallant effort all down the straight to catch the "Tartan," but the weight told against him, and *Hoolet*, ridden by Mr. Marlborough, won a splendid race by a length and a half. Time, 2 min., 47½ secs.

3.—THE NIPPON HANDICAP.—A handicap for all Japan Pony winners at the meeting. To be handicapped by the Stewards at the close of the second day's racing. Entrance, $5. Compulsory. Open also to beaten Ponies at the meeting. Once round.

Mr. J. Peel's *Ichi Roku*, 10st. 7lbs. 1
„ Morrison's *Distemper*, 10st. 12lbs.. .. 2
„ Pringle's *Planet*, 10st. 3lbs. 3
„ Stevens' *Exile*, 10st. 3lbs... 0
„ Fritz's *Fleur de Lys*, 10st... 0

Planet, of course, got the best of the start and led up the hill, *Ichi Roku* bringing up the rear. At the five furlongs *Distemper* closed up to *Planet* and soon wrested the lead from him, while *Ichi Roku* ran up and joined them, and the three raced well together to the quarter mile, all the jockeys working hard. *Distemper* dashed ahead on nearing the turn, but was at once challenged by *Ichi Roku*, and the two came down the straight together at a good pace. At the distance, however, *Ichi Roku*, ridden by Mr. Osborn, shot ahead with a rush, justifying the opinions which had been formed of his powers by the previous day's running, and won a capital race by a length. Time 2 min., 19½ secs.

4.—THE SCURRY STAKES.—For all Ponies. Weight as per scale. Entrance, $5. Three furlongs.

Mr. Morrison's *Braemar*, 10st. 8lbs. 1
„ Savile Stuart's *Talisman*, 10st. 5lbs. ... 2
„ Fritz's *Faust*, 10st. 5lbs. 3
„ J. Peel's *Ichi Roku*, 10st. 6lbs. 0

One false start was made, and when the flag fell *Braemar* got by far the best of it, the other ponies following in rather a straggling manner. *Braemar's* jockey, Mr Marlborough, worked hard from start to finish, and would doubtless have found a dangerous rival in *Ichi Roku*, had not that pony indulged in his usual fancy for bolting to the outside rail at the turn. This mishap left the course clear for *Braemar*, who won easily by several lengths. Time 46 secs.

5.—THE CHINA CONSOLATION PLATE.—For all beaten China Ponies at the meeting. Weight for inches. Entrance, $5. Once round and a distance.

Mr. Savile Stuart's *Not Proven*, 10st. 8lbs..... 1
„ do *Talisman*, 10st. 5lbs..... 2
„ Fritz's *Don Carlos*, 10st. 5lbs..... 3

Talisman led off followed by *Don Carlos*, *Not Proven* lying well behind. After passing the half mile *Don Carlos* began to show signs of distress and at the quarter was quite done. In the meantime *Not Proven* was picking up, and joined his stable companion on entering the straight, down which both raced hard, as Mr. Savile Stuart had declared the best to win. *Not Proven* demonstrated that he was best, and won by a head, with Mr. Marlborough up. Time 2 min. 44½ secs.

6.—THE SOLACE CUP.—For all beaten Japan Ponies at the meeting. Weight for inches. Entrance, $5. Five furlongs,

Mr. Morrison's *Disinfectant*, 10st. 2lbs. .. 1
„ Pringle's *Planet*, 10st. 6lbs. 2
„ Mason's *Silverspring*, 10st. 8lbs. 3

Planet again got the best of the start, and *Silverspring* the worst. All went off at a hot pace, doing the first quarter in 31 seconds, while the riders plied whip and spur without ceasing. Great hope had been entertained of *Planet* winning this race, but he seems not to have been in the same good form that he was in the Spring, for although he led down the straight and looked very like winning, he shut up when *Distemper* collared him at the distance, and allowed the "Tartan" pony, ridden by Mr. Marlborough, to win by a length and a half. Time, 1 min., 22½ secs.

7.—THE SAYONARA STAKES.—A handicap for all Ponies. To be handicapped by the Stewards at the close of the second day's racing, when entries will be received. Winner of No. 2 (third day) excluded. Winner of the Nippon Handicap, 7lbs. extra. Winner of any other race after publication of the handicap, 3lbs. extra. Entrance, $10. Once round.

Mr. Morrison's *Braemar*, (3lbs. ex.) 11st. 9lbs. 1
„ P. Kell's *Vandal*, 10st. 12lbs. 2
„ Savile's *Crusader*, 10st. 12lbs. 3
„ Morrison's *Lintie*, 11st 4lbs. 0
„ Osborn's *Grey Friar*, 11st... 0

Some delay was occasioned at the post by two false starts and the difficulty of bringing *Grey Friar* into position. When the flag fell *Braemar* went to the front, *Vandal* being last by several lengths, but *Grey Friar* speedily took the lead closely followed by *Liddesdale*. After passing the five furlongs *Vandal* joined the other ponies and at the trees took third place. Although carrying top weight *Braemer* was full of go, and easly beat off *Grey Friar*, while his rider, Mr. Marlborough, could afford to despise the desperate effort *Vandal* was making to reach him, for he won easily by a couple of lengths. *Crusader* beat *Grey Friar* in the straight and secured third place. Time 2 min., 15 secs.

BETTOS' RACE—CHINA PONIES.—Once round. Minimum weight allowed 100 lbs.

Not Proven 1
Lintie 2
Faust 3
Don Carlos 0
Wilhelm Tell 0
Talisman 0

For this the above six ponies went out, and a very good race ensued. *Lintie* ought to have won, but close on the post Dr. Wheeler's Narcissus-like youthful betto on *Not Proven* came up with a rush and cleverly won the race by a head. Time, 2 min., 18¾ secs.

BET OS' RACE.—JAPAN PONIES.—Five Furlongs. Minimum weight 100 lbs.

Disinfectant 1
Planet 2
Silverspring 3

It was quite dark when this race was run, and nearly impossible to make out the winner. *Ichi Roku* and his rider seem to have been wandering about in search of the post, which they failed to find in time, so that but three ponies participated in this event, with the above result, good time having been made, viz., 1 min. 21 secs.

At this meeting Mr. Evers acted as Judge, Mr. Cruikshank as Clerk of the Course, and Mr. Cobden as Starter. The Committee did their work well, and the commendable promptitude in starting the different events which we noticed on the first day, was kept up throughout.

Correspondence.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Tôkiô, 5th November, 1877.

SIR,—Frequent references have been made in the foreign journals of Japan to Professor Morse's discovery of an 'ancient' or 'prehistorical' or 'pre-adamic' shell-heap at Omori.

The said heap was first scooped into when the double line of rails was laid, and part of it was taken for that purpose.

It arrested my attention then and its nature was pointed out to one or two people, but I never had leisure to examine it closely till its examination fell into much abler hands. I am not sure how far Professor Morse, who is generally esteemed an authority on such subjects, is responsible for assigning so great antiquity to this old '*kitchen-midden*,' as these remains are now technically called, and I have not seen any abstract even of the lecture.

It is the usual course to publish at a subsequent meeting of the Asiatic Society all papers of any general interest, and I do not see why a popular lecture should not also be so made public. In the meantime I would desire to record my grave doubts as to whether these remains are, any of them, over a few hundred years old, certainly not more than one thousand. Any question of their dating from beyond the historical period is not at all worth discussing, as any one must feel who enters on their examination with an intelligent understanding of the problem to be solved and an unbiassed judgment. I think it is not at all improbable that such implements may all be found of recent manufacture in poor and outlying fishing villages of Japan at the present day, and these will be duly announced when discovered.

On such evidence as seems to have been adduced, the the present inhabitants of Orkney and Shetland belong to an almost pre-adamic period. A pair of spring scissors such as one sees for sale in any shop in Tôkiô is figured in a recent work as evidence of the pre-historic date of the lake-dwellers in Switzerland.

Her Majesty Queen Victoria used a spining-jenney, but does not therefore date back a couple of centuries. The process of making chronological inferences from such data was pretty well, and one would have thought finally, exploded, in a series of archaeological lectures given in Edinburgh a short time ago. As to geological evidence I would speak with great diffidence, but what chronology can be as yet definitely adopted for the geology of Japan?

As it is, I would deem that even the weakest point in the argument, but seek further light.

I am,
Your obedient servant,

O.

Law Reports.

IN H. B. M.'s CONSULAR COURT KANAGAWA.

Before RUSSELL ROBERTSON, Esq., Consul.

Monday, November 5th, 1877.

Arthur Bell, Nadal Dubini, Bobert White, Ake Bidderbjelke, William Taylor, and Robert Edmunds, sailors from the British barque *Naworth*, were charged with refusal of duty.

G. F. Williams, master of the barque *Naworth*, was sworn and said: The men were put on board this morning by the police, and they refused to turn to work. I asked them if they would work, but every one of them refused without giving me any reason.

The prisoners declared to the Court that they would do no more work in the ship:

Sentenced to 14 days' imprisonment with hard labour; to be replaced on board, should the ship leave before the expiry of the term of imprisonment.

IN H. B M.'s COURT, KANAGAWA.

Before H. S. WILKINSON, Esq., Acting Law Secretary, and Messrs U. MCGREGOR, J. W. SUTHERLAND, E. MARCUS, G. DINSDALE, WM, AUSTIN, as Jurors.

Friday, Nov. 9, 1877.

Suliman, a Malay sailor from the P. & O. Co.'s steamer *Sunda*, who was committed for trial on the 29th August last, was placed in the dock charged with having, on the 12th August, feloniously, wilfully, and maliciously wounded the sailor Ketchill with the intent to do him grievous bodily harm.

Mr J J, Enslie, barrister-at-law and 1st assistant in H. B. M.'s Consular service, appeared on behalf of the prosecution. He addressed the jury to whom he stated the facts of the case. He then asked leave of the Court to take at once the evidence of the Dr. Eldridge, who was anxious to attend to his professional business.

Dr. Stuart Eldridge was sworn and said: I am attached to the General Hospital in my professional capacity. In the middle of August last the prosecutor was brought to the hospital with a wound, inflicted by a sharp weapon, on the right side of the spine, opposite the eighth dorsal vertebra. The direction of the wound was from the sufferer's right side, nearly upon a horizontal line, inward and forward. The wound itself appeared to be trifling, but its remoter effects were extremely grave, as it resulted in a total paralysis of the whole of the right leg, which has persisted up till the present time. This paralysis is directly connected with the stab wound; a most careful examination has failed to reveal any other injury or any condition of disease that could account for the symptom. After most careful consideration and consultation with several of our medical colleagues, the hospital surgeons were compelled to conclude that the paralysis was due to a slight wound of the spinal cord, inflicted by the point of the wounding instrument.

Ketchill, who was brought into Court, supported by two men, was admonished to speak the truth. He said: I was born at Java; I was formerly a sailor in the steamer *Sunda*, and am now an inmate of the General Hospital, suffering from a stab wound in my back. At about 9 p.m. on the 12th August I came on deck to fetch some water; I fell down on the deck, and cried out, "Serang, I am stabbed by Suliman." The serang and two more men carried me below, where they bandaged my wound. The doctor of the ship came on board at 10 p.m.; he stitched up my wound.

To the prosecuting Counsel: It was on board the *Sunda* that I was stabbed; it happened on deck, near the pump. There was a lamp close by, and I saw the prisoner when he stabbed me.

Percy William Case, chief officer of the *Sunda*, was sworn, and said: On the 12th August last, between 8 and 10 p.m., I was on board the *Sunda*. I was on the quarter deck when I heard some one sing out that a man was stabbed. I went forward, and found the prosecutor lying on the deck, with a wound in his back. There were several people collected already I gave orders to tie up his wound, and asked who had done it? While I was standing there, another officer came and told me that a man had just gone down the ladder into a boat, and commenced pulling ashore. I ordered the boat back, and the prisoner came out of the boat. I kept him in irons until the police arrived.

To the Jury: I have heard that the prisoner and the prosecutor had been fighting ashore on that same day. I did not find any weapon on prisoner when he came out of the boat. I do not know whether the prosecutor was sober when he came on board. The prisoner did not appear to me to be intoxicated. I have not been able to find any one who saw the fight ashore between prisoner and prosecutor. When I asked, 'Who did it?" I received no answer. The weapon with which the stab was given was not found on deck. The only lamp I know of in the neighbourhood of where the stab was given was below, and could scarcely light the scene of the stabbing; but there was a light in the galley that I think would have been sufficient thereby to recognise a person. The night was dark.

To the Court: The surgeon who first attended the prosecutor has now gone to England.

This closed the evidence for the prosecution.

The prisoner had no witness to call, but expressed a desire to make a statement. He was cautioned that his statement might be used against him and then proceeded to say: On that day, I and the prosecutor were ashore together, and the prosecutor stabbed me in the face and the back. The quarrel arose because a woman had preferred my company to that of the prosecutor. I returned on board at 2 p.m., and the prosecutor about 6 p.m. I then wanted to go ashore again to see the woman, but when I was going away in a sampan, I was stopped by the mate, who put me in irons. I then heard that the prosecutor had been stabbed, and afterwards the police came and removed me to the jail.

His Honour then charged the jury. He told them that the first question for them was: Was the prosecutor wounded? Of that there could be no doubt. The second question was: Did the prisoner wound the prosecutor? This was entirely a question of fact. The prisoner's own statement had supplied a motive for the act. The next question was: Was there justification for the act? There was no evidence whatever of any lawful excuse. As to the question: Was any grievous bodily harm inflicted? the medical evidence leaves no doubt about that. Did the prisoner, if he inflicted the wound, intend to do grievous bodily harm? The intention can only be known from the circumstances, but the law establishes a presumption against him who uses dangerous weapons.

After deliberation for some time, the foreman of the jury stated that the jury considered the charge not proven.

His Honour informed the foreman that the English law requires a verdict of guilty or not guilty; the verdict just given he could not accept.

In compliance with a request from a juror, the prosecutor was asked whether any one else was present at the time he was stabbed? The reply was in the negative.

The foreman of the jury told the Court that the jury had resolved to give the prisoner the benefit of the doubt, and declare him not guilty.

His Honour replied that he must have a verdict of guilty or not guilty, pure and simple.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

After some further consultation, the foreman declared the jury's verdict to be not guilty.

The prisoner was then discharged.

IN THE U. S. CONSULAR-GENERAL COURT.

Before H. W. DENISON, Esq., Vice Consul-Ceneral.

Friday, Nov. 2, 1877.

J. R. ANGLIN *vs.* NORMAN WIARD.

This was a motion for a new trial in the above case, which had been adjudged in this Consular Court on the 15th ultimo.

Both parties were personally present.

Plaintiff opposed the motion on the plea that the same was only filed on the 18th ultimo, and consequently after the term for filing such motion, prescribed by the Consular Court Regulations, had expired.

Defendant said that he had filed his motion as quickly after receiving the copy of the judgment, rendered on the 15th October, as the existing opportunities for mailing letters between Yokoska and Yokohama did permit.

Plaintiff observed that when, in a session of the Court, held on the 13th October, His Honour had expressed his desire to have fuller evidence on certain points in the case, defendant had declared that he preferred that judgment should be given on the evidence already taken.

Judgment reserved.

IN THE FRENCH CONSULAR COURT.

Before H. PIERRET, Esq., Consul.

Messrs. A. GIRARD and G. BLAKEWAY, Assessors.

Tuesday, November 6th, 1877.

A. PILLON *vs.* C. MICHEL.

In the above case was to-day rendered the following

JUDGMENT.

The Court, having heard the parties and having duly deliberated, decrees as follows:

Considering that the ledger of the firm of Messrs. Maigre and Co. shows that the rent for the month of January was duly entered in the accounts of the said firm;

That Pillon's claim, including rent for the property No. 174 until the 31st December amounted to $1,200.00, and his debit account to $562 67, leaving a balance in his favour of $697.33; that when to this amount are added the $100.00 claimed by Pillon as rent for January, the total becomes $737.33, but that from this total are to be deducted $44.00, amount of a cheque, which Pillon admits to have received on account from Mr Mitchell and to have paid over to Messrs Favre Brandt, leaving a total on the 1st February to Pillon's Credit of $693.33, while he figures on the list of claims for $703.33, thus making a difference of $10.00 in favour of Pillon;

Considering that Pillon is consequently not entitled now to claim rent for January;

With regard to the interest of one per cent. per month, of which Pillon claims payment:

Considering that he has produced no documentary evidence in support of this claim, and that consequently the same cannot be admitted;

With regard to the sum of $40.00, claimed by plaintiff as rent for the months of July and August;

Considering that the firm under liquidation has not by any contract bound itself to pay that rent, and that it is not to be presumed that the said firm would undertake to pay such a rent for a place, only to be used for storing some machinery, which might have been stored anywhere else at considerably less cost;

For these reasons, the Court dismisses the claim of Pillon and orders him besides to pay costs.

REUTER'S TELEGRAMS.

LONDON, November 3rd, 1877.

The French Ministry have tendered their resignation.

Alice Rhodes has received a free pardon.

Staunton has been sentenced to penal servitude for life.

The *Daily News* supports Governor Hennessy in his treatment of the Chinese in Hongkong.

LONDON, November 2nd, 1877.

Lord Derby, replying to a Memorial of the Merchants of China, has declined to publish that portion respecting the Trade omitted from Sir Thomas Wade's Report, alleging as a reason that the Indian Government has it under consideration.

LONDON, 22nd October, 1877.

Ahmed Mukhtar Pacha has retreated to Kars with a portion of his forces. His defeat was owing to the powerful reinforcements and the number of guns brought against him by the Russians.

DOUBLE ACROSTIC.

Sole stain upon a glorious name,
My hero died a death of shame.

1. There bigots with a patriot fought,
   Their common country's ruin sought.
2. Whom some with poet's frenzy fine
   Endow, yet ne'er wrote he a line.
3. Aye loyal to a royal race,
   In deathless verse his name we trace.
4. Where Wisdom sought, most things above
   What most men set, yet none should love.
5. What youths and maids may kiss among
   If we may trust an oft-sung song,
   Or mournful herb that dreadful doom
   Forebodes and ignominious tomb,
   Or nymph of Thracian fountain born
   Girl-comrade of Hell's Queen forlorn.

3.—Mate.	

Correct answers received from W.H.S., and W.B.M., Tôkiô; Q., and C.B., Yokohama.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley, for the abovenamed Pills, for wind in the stomach, from which I suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable Pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

January 13, 1877. 13ins.

THE STAFFORDSHIRE
Fire Insurance Company.

THE UNDERSIGNED having been appointed Agent to the above Company is prepared to issue Policies at Current Rates, at Yokohama and Tôkiô.

E. L. B. McMAHON.

Yokohama, July 13, 1874. 3ms.

Plain Mousselines de Laine	—30 yds.	30 in	0.16½ to 0.18	

Sugar.—Business during the week has been unimportant, but the market closes firm at last quotations.

Sugar:—Takao in bag	(nom.)	per picul	$4.65	China No. 4 Kook-fah ... ... per picul	$6 90 to $7.20
,, in basket	,,	,,	$4 50	,, No. 5 Kong-fun ... ... ,,	$6.20 to $6.60
Taiwanfoo in bag	...	,,	$4.55	,, No. 6 E-pak ... ... ,,	$5.20 to $5.70
do. in basket	...	,,	$4.30	Swatow Brown ... ... ,,	None.
China No 1 Ping-fah	...	,,	None	Daitong ... ... ,,	$3.90
,, No. 2 Ching-pak	...	,,	$7.90 to $8.10	Japan Rice ... ... ,,	$2.00 to $2.35
,, No. 3 Ke-pak	...	,,	$7 40 to $7.70	Kerosene Oil, nominal ... ... ,,	$4.50

Kerosene Oil.—Owing to the total absence of stock quotations are $7 per case retail, and $4.50 for quantity. The *Alice* for Yokohama and Kobe, has just arrived.

EXPORTS.

Silk.—Our last report was written on the 2nd instant. Since then a large business has been done in Hanks, in consequence of more settled politics in France, and prices have to some extent regained their former places. There has been a fair demand for Kakeda at quotations, whilst the enquiry for other Raw Silk has been limited and the rates last reported are, so to say, unaltered. Filatures have not undergone any change.

Settlements are 1,250 bales of Hanks, 75 bales of Oshius and 50 bales of Filatures, making a total of 1,375 bales. Arrivals have somewhat fallen off, being 930 bales, and stocks are reduced to 2,600 bales. The total export from 1st of July to date is 9,491 bales, against 15,588 bales for same period last year.

		In London at 4s. 0½d. per lb.	*In Lyons at f. 5.10 per kilo.*
Hanks,—Superior	—	—	—
,, Best No. 1 & 2	$560 to 580	20/3 to 21/0	56.00 to 58.00
,, Good No. 2	$540 to 550	19/7 to 19/11	54.00 to 55.00
,, Good all round No. 2½	$510 to 530	18/8 to 19/4	52.00 to 53.00
,, Medium No. 3	$480 to 500	17/7 to 18/4	49.00 to 51.00
,, Common to inferior No. 4 & 5	$450 to 470	16/7 to 17/4	46.00 to 48.00
Oshius,—Extra	—	—	—
,, Best	$550 to 570	19/11 to 20/8	55.00 to 57.00
,, Good / ,, Medium	$500 to 530	18/3 to 19/3	51.00 to 52.00
Hamatski,—Good to Best	$460 to 480	16/11 to 17/7	47 00 to 49.00
,, Common to Medium	$440 to 450	16/3 to 16/7	45.00 to 46.00
Kakeda,—Extra	$630 to 650	22/8 to 23/4	63.00 to 65.00
,, Best	$600 to 620	21/8 to 22/4	60.00 to 62.00
,, Good	$550 to 580	19/11 to 21/0	55.00 to 58.00
Filatures	$620 to 750	22/3 to 26/8	62.00 to 74.00

Tea.—During the past week the demand for this staple has been rather slack, and prices for all grades over *Good Common* are for the moment $1 to $2 per picul easier. Fine parcels continue in small supply.

Common	$10.00 to $11.00	Fine	$22 00 to $25.00
Good Common	$12.00 to $15.00	Finest	$27.00 to $32.00
Medium	$15.00 to $16.00	Choice	$34.00 nominal
Good Medium	$17.00 to $19.00	Choicest	—

EXCHANGE AND BULLION.

Exchange.—The holidays have somewhat interfered with business but at the close there has been a fairly large business doing at slightly firmer rates.

Rates close as follows:—		On Shanghai—Bank sight	73

REPORTS.

The Pacific Mail Company's Steamship *China*, 3 836 tons, Gordon G. Berry, Commander, sailed from San Francisco October 11th, at 12.15 p m. Till October 27th had fresh breezes from S W to W and fine weather, then to November 4th light southerly winds and calms; to November 7th fresh gales from south to north with heavy sea, and thence to Yokohama fresh gales from N E with fog and rain, arriving November 8th, at 8 a.m.

The British barque *Alice* reports having left Hongkong, where she had put in for repairs, on the 30th September. On the 6th October when off the N.E. end of Luzon, experienced a heavy northerly gale, with a rapid southerly current, lasting five days. Had a heavy N E. gale off the Bashees from October 20th to 25th; and strong N.E. monsoon from the North end of Formosa to port, being 195 days from New York.

W. & C. SCOTT & SON.

FIRST PRIZE MEDAL and DIPLOMA OF HONOUR awarded, CENTENNIAL EXHIBITION, Philadelphia, 1876. For excellence of Materials and Workmanship in their PREMIER QUALITY and medium grades. Their New PATENT TRIPLEX action and COMPENSATING LUMP.

CHOKE BORES ON GAME.

WE have received numerous letters testifying to the excellence of our Guns. The following are a few extracts.

The W. & C. SCOTT & SON No. 10 choke bore "is all its name implies." I have killed stone dead grouse flying at 92 yards, and at 50 and 60 yards it will kill every time. At duck shooting it is perfection.
Brainherd, Minnesota. T. P. C.

I have just returned from North Carolina (Currituck Sound). I cannot say too much in praise of my choke bore. I have killed ducks at 60 yards, dropping dead out of the bunches at that distance. I consider I have an extraordinary gun, and deem it my duty to speak in the highest praise of guns of your manufacture. Wishing you all the success you deserve.
Red Bank, N.J., 1877. G. A. W.

From Captain BOGARDUS, Champion Shot of the World.—The Breech-loader you furnished me with is the best *proportioned* and most *effective* gun I ever owned or used. Its shooting is perfect, and I have won every contest since receiving it including my late English matches. I fully recommend the Scott as the gun.

I have carried guns of your make from Nova Scotia to Florida, and from the Adirondacks to the Pacific, and find them all I could wish for.
Cazenova, N.Y. L. W. L.

The guns for myself and friends have safely arrived. I have now great pleasure in acquainting you that I am extremely glad in possessing them. I have tried them and they give me great satisfaction. My friends are also very pleased too.
Yedo, Japan, March, 1876. V. E. B.

I have just received the Two fine guns ordered for me by Mr. B. F. Stevens, London, and desire to express my entire satisfaction of them. Such fine weapons which while they do credit to a reputation already so well known as to need no establishing, deserve from me some expression of my appreciation of the manner you carried out my wishes. A more substantial evidence of my estimation of the gun is to be seen in the fact that I have this day directed Mr. Stevens to order another for me.
G. R. W.

SUPPLEMENT

TO THE

Japan Weekly Mail.

YOKOHAMA, SATURDAY, 10TH NOVEMBER, 1877.

ARRIVAL OF THE AMERICAN MAIL.

TELEGRAMS.

London, October 10.—A correspondent at Chevka Pasha's headquarters telegraphs from Radawairzy, near Plevna on Monday, as follows: Our army occupies Telishe, and to-day effected a junction with Osman Pasha, who took up a position of the heights of Dubrik. There has been no fighting on our way hither, exeept a trifling cavalry skirmish. The Russians fled on our approach. We hope to arrive in Plevna to-morrow. Reconnaissances in every direction have failed to disclose a Russian.

London, October 10.—In consequence of restrictions placed by the Russians on the movements of correspondents, the number of those with the army before Plevna has been reduced from sixty to two, a number of English and Russian correspondents having recently been ordered to quit. The fact is, the authorities are endeavoring to keep the state of the army secret. Eye-witnesses say the soldiers are suffering from severe weather, and are lying on the bare earth. The hospitals are full of wounded, and the sick pass the Danube by thousands—cart loads at a time.

London, October 10.—A Russian official dispatch of yesterday says: In consequence of the occupation of new positions by our troops in recent operations, the enemy last night abandoned most of his positions, including Kizel, Tepe and Began, and is retreating. We pursued him and during the night occupied the line of Chadshirall, Sabatan and Kulwerdan.

Bucharest, October 10.—General Gourka, with 11 regiments of cavalry and 8 batteries of horse artillery, has started for Sofia, via Sirouva and Ilevi. Four cavalry regiments of the Guard will join him en route.

London, October 10.—A Galatz special says: An engagement took place off the Sulina mouth of the Danube on Tuesday, between a Russian and a Turkish steamer. The latter exploded and sank, with all hands.

London, October 10.—A Galatz special says: A passenger vessel from St. George mouth of the Danube, bound for Tutcha, accidently struck a Russian torpedo and was blown up, with all hands. This is possibly the origin of the report of the naval battle

London, Oct. 10th.—The *Times* says: Everything points to dearer money. It seems likely that even the five per cent bank rate of discount will not be sufficient to arrest the outflow of gold. One hundred thousand pounds worth of American eagles are said to be ordered for to-day.

Paris, October 10.—Duc De Broglie, speaking at a meeting of the Conservative Committee, defended the Government from the charge of Clericalism. The real issue, he said, was conservatism or Radicalism, McMahon or Gambetta. He said Gambetta wore a mask, sheltering himself first behind Thiers and then behind Grevy. He dreaded Gambetta's succession to the Presidency, which would ensue should they desert President MacMahon, who had no desire to destroy the Republic.

Paris, October 10.—*La France* publishes a letter addressed to the American Legation from Brussels, by an American named Bedel, who claims that he was removed from his house and family and expelled from France without an assigned reason. Bedel claims reparation through the Legation.

Athens, Oct. 10th.—M. Tricoupis, Minister of Foreign Affairs, has informed the British Minister that Greece was obliged to regard the threatening language of the Porte as a motive for completing her military preparations as rapidly as possible.

London, October 16.—Sanford's horse Mate won the Cambridgeshire stakes at Newmarket, to-day.

Berlin, October 10.—A private bank in Pomerania has suspended. The liabilities are said to be £75,000.

London, October 10.—A Madrid special says: The Cuban loan, which is guaranteed by colonial customs, will be increased $5,000,000 next year, to defray war expenditures.

Bucharest, October 10.—Until further orders, no correspondents will be allowed with the Russians at Plevna

It is expected that General Zimmerman's army will shortly assume the offensive.

A Kuraja corrspondent confirms the report that Moukter had evacuated Katzelpa and Soubatin, retiring to the summit of Aladja Dagah. A correspondent says these movements were necessitated by Mouktar's having lost 8,000 men during the battles of October 2d and 3d. The Russians have occupied the positions evacuated by the Turks. Later reports say the Russians, in consequence of unfavorable weather, retired to the positions they formerly occupied. Operations therefore, are postponed. The Russian loss to the present time is 3,300.

London, Oct. 10th.—Russian estimates place Mukhtar Pasha's losses on the 2nd and 3rd of October at 6,000.

Rome, Oct 10th.—The *Italia* denies the statement that the Porte has demanded the recall of the Italian Consul at Rustchuk.

London, October 10.—If the northwest monsoon proves good, the Indian famine will end in four months. Prospects in the northwest have so much improved that the scheme of railways and other works for relief have been abandoned. Subscriptions at the Mansion House for the sufferers are $1,700,000.

London, Oct. 10th.—The insurrection which broke out on the 12th of September in the central districts of Daghestan, and gradually extended through the whole of central and southern Daghestan, does not appear to be quelled, as it was thought to be after the defeat of the main body of the insurgents by the Russians. An official dispatch from Kainjal says: A band of 4,000 insurgents were defeated on the 30th of September and the 3d of October, with a loss of 350 killed, wounded and prisoners. The Russian loss is insignificant. Other bands are still being pursued.

Paris, October 10.—Gambetta addressed a great meeting last evening. Every precaution was taken by the organizers of the meeting to prevent a disturbance. The military authorities stationed a detachment of troops in the Place Chateau d'Eau, close to the place of meeting, and posted a guard of police in the neighbourhood. The meeting passed off without disturbance. In his speech Gambetta said the existence of universal suffrage was at stake, and pointed out the danger which that institution would incur if, after having at the last elections pronounced in favour of the republic, it should now give it the lie in consequence of governmental pressure. In that case the public peace would be compromised, for universal suffrage was possibly its only defence. Its fall would involve the decadence and death of the country. Gambetta eulogized Grevy as the man best fitted for continuing the work of concord, conciliation and respect of law. He disclaimed any desire for power for himself, and concluded with a violent attack on the clericals, who, he said, had excited the fears of Europe by the presence of an anti-Republican coalition. Referring to the Republican prospects, he said:

"After sifting information which reaches me from all quarters, I assure you the 363 will return to Versailles reinforced to 400."

Bucharest, Oct. 10th —The Russians have commenced their parallels before Plevna, under the superintendence of General Todleben. The heavy masses of troops which are being sent to Bulgaria certainly indicate their purpose to prosecute active operations during the autumn, as the Russians do not need these reinforcements to retain their present position.

Belgrade, Oct. 10th.—A correspondent says he heard from a diplomatic source that the Porte had demanded explanations regarding Servia's purpose in arming and negotiating with Russia and Roumania, and the Porte declares it will be obliged to send a special commissioner to Belgrade to inquire whether its suzeraine rights are not being tampered with.

All first-class militia brigades, except those of Belgrade, Shabatic and Valievo, have marched to the frontier. The second-class brigades will follow in ten days more. Money and several hundred boxes of shoes have arrived from Russia. Negotiations with Russia have at last come to a satisfactory close, and a Cabinet council has resolved upon warlike measures, though not before the middle of Nov.

Paris, Oct 9th.—The ministerial papers announce that of the 363 Republican seats, the winning by government of 117 is almost certain, while 40 more are favorable, so that government will have a majority of at least 20. The Left, however, still reckons confidently on 400 seats.

Gambetta is prosecuted for placarding his manifesto to electors of the twentieth arrondisement on the streets, not for its publication. The printer of the manifesto has been summoned before the Correctional Tribunal.

London, Oct. 9th—A special from Frankfort says: According to trustworthy intelligence received here the fortresses of France on the Italian frontier are being hurriedly put in a state of defence. Soveral of them are being armed with new steel and bronze guns.

Paris, Oct. 2th.—The government on Monday detained all packages of English and Belgian newspapers arriving at Paris railway stations

London, Oct. 9th.—Sir Stafford Northcote, Chancellor of the Exchequer, in a speech yesterday, said: "I can not help thinking myself that there may be a surprise which may disappoint the prophecy of those who have been declaring that the war cannot terminate until another and more decisive campaign. One thing is certain, that both sides have displayed such gallantry that if an opportunity for settlement should arrive they might accept it without any loss of prestige."

Berlin, Oct. 18th.—The *Norde Deutsche Algemeine Zeitung* confirms the statement that no alliance has been concluded between Italy and Germany. It says negotiations which may be pending would have no aggressive significance, but would tend to secure the co-operation of Germany and Italy should they find themselves, after the French elections, confronted by a clerical and consequently aggressive France.

Gorny-Studen, Oct. 9th.—General Prince Imeritensky has been appointed Chief of the general staff of the Russo-Roumanian army before Plevna, General Zotoff taking command of General Imeritenskey's army corps.

Bucharest, Oct. 9th.—Frost and storms have rendered the Sistova and Nicopolis bridge impassable for vehicles the last two days.

Geneva, Oct 8th.—A severe earthquake shock was experienced here on Monday morning. Some buildings were cracked, but the damage is slight.

Constantinople, Oct. 9th.—A telegram from Orchanie states that twenty-four Turkish battalions, escorting a convoy to Plevna, defeated a Russian detachment sent to oppose them.

Pesth, Oct. 9th.—The *Pesther Lloyds* states, under reserve, that the Prince of Russ, German Embassador to the Porte, has been instructed to declare the Turkish blockade of Black sea ports insufficient, and therefore void.

Belgrad, Oct. 9th.—Negotiations between Servia and Russia are not concluded. Servia requires a guarantee of independence, and promise of extension of territory in the direction of Bosnia. The Russian envoy awaits further instructions.

Achmet Eyoub Pasha will take command of the Turkish forces on the Servian frontier.

London, Oct. 8th.—The single scull race for £400 and the championship of the Thames to-day from Putney to Mortlake, between Higgins and Boyd, the champion, was won by Higgins.

London, Oct. 8th.—A correspondent before Plevna telegraphs: On Wednesday the Grand Duke Nicholas' interpreter, who was sent into Plevna with a flag of truce, was personally received by Osman Pasha. This reception was granted in answer to a sealed letter from the Grand Duke. Though the interview was thought to be only about the burial of the dead, it created considerable interest.

London, Oct. 8th.—An immediate mobilization of another Russian army corps for Bulgaria is ordered.

Constantinople, Oct. 8th.—Ali Saib, commanding the Turkish forces on the southern frontier of Montenegro, on Friday, attacked Podgoritza, Spuz and the small forts of Avnie, Ismail and Dervish. The attack was vigorously repulsed.

London, Oct. 8th.—A Constantinople dispatch says: Achmet Eyoub Refat Pasha, late Chief of Staff, two Brigadiers, and several superior officers are to be tried. Eyoub Refat is charged with disobedience, in having refused to obey Mehemet Ali's orders to advance.

General Hasen, a United States Minister attaché at Vienna, has arrived at Bucharest. He will proceed to Bulgaria immediately

There is already two feet of snow in Shipka pass. Troops are obliged to sit in frozen trenches ankle deep in mud.

The Porte has seized a Greek vessel entering the gulf of Orta with arms and ammunition, and Greece has demanded her restoration.

General Gourko has been appointed to the command of the Russian cavalry in the rear of Plevna.

Vienna, Oct. 8th.—A special says: Constantinople authorities merely intend that Raduf Pasha shall retain enough troops at Shipka to maintain the defensive. All reserves collected in Roumelia have been sent across the Balkans to a new position which the Turks seem to be preparing at Orchanie for Osman Pasha to fall back upon, should he be obliged to leave Plevna. The only question is whether he will be able to do so. The massing of the Russian guards in the rear of the line at Plevna looks very much as if the Muscovites were preparing to effectually close the communications of Plevna by sending a large force across the Vid to the rear of the Turkish position.

London, Oct. 8th.—Correspondents hereafter will only be admitted to the lines of active operations on days of engagements. At other times they must remain at corps headquarters, information sent out by them having thwarted Russian plans. Within ten days 25,000 sick, chiefly suffering from fever, have reached Odessa hospitals.

Constantinople, Oct. 8th.—Mukhtar Pasha telegraphs the Porte, under date of Friday, as follows: To-day the bulk of the Russian forces fall back to the foot of Karatool, leaving only six battalions intrenched at Kabaka. They have thus abandoned their positions parallel with our lines. There is no trace of the enemy at Baldoran, Kizilvan or Oghuzlu, they having struck their camp. The enemy's losses during the three days' battles at Zanilar, Gaulveranand Aladjavdagh are estimated at 10,000 killed and wounded. Our losses are about 2,000. The Grand Duke Michael commanded the Russians in person. Providence has happily frustrated the formidable plans of our enemies.

Constantinople, Oct. 8th—Snow and rain are continually falling, and it is thought will suspend all operations in Bulgaria and the Bulkans. It is probable Mehemet Ali will be appointed to the chief command in Thessaly.

London, Oct. 8th.—Mukhtar Pasha says the Russian losses during the recent fighting were 15,000, and the loss of the Turks 2,500.

Constantinople, Oct. 8th.—The Servian diplomatic agent has formally renewed to the Porte assurances of the pacific intentions of Servia.

Paris, Oct. 7th.—Gambetta has issued a manifesto to

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

the electors of the Twentieth arrondissement of Paris. In it he said:

Citizens: After four long months of excessive administrative pressure and most deplorable proceedings relative to official candidatures, France at last speaks. She will say in a few days what she thinks of the men of the 16th of May, the allies and protectors of the men of the 2nd of December, the servants of Henry the Fifth, and agents of the Syllabus and the Pope, who are all sheltered under the patronage of the President, doubtless for the better protection of republican institutions. France will say what she thinks of the personal policy of the chief of state, and the aristocratic and retrograde pretensions of the de Broglie cabinet; of the unjustifiable dissolution of the Chamber of Deputies; of the miserable war waged by the government against newspaper hawkers, schoolmasters and other defenceless victims of the projects and plots of this coalition of monarchists, who are preparing for her three years of intestine conflicts and divisions, to be followed in 1880 by a terrible crisis and perhaps revolution. France will pronounce on the policy inaugurated by the letter dismissing the Republican Ministry; on the order of the day to the troops at the Longchamp review; on the presidential message of the 19th of September, and on that system of government which the chief executive power vindicates as a right above the consitution. France will declare for the republic. She will say she intends to make an end of anarchy and dictatorship, withdraw the nation as well as the individual indefinitely from clerical rule, and insure that public force shall never be employed except in the service of law. I confidently declare that France, despite manœuvers against the freedom of her vote, will scorn official candidature and its agents, and supra Royalists, Cæsarists and Clericalists, both the knaves and partisans of violence. She will condemn dictatorial policy, and leave the chief of executive power, who is transformed into a plebiscitary candidate, no alternative but to submit or resign. We ourselves, sure of the support of the country, shall know how to make its will prevail over a powerless and incorrigible minority. The union of all good Frenchmen will keep us discreet and render us invincible for the country and the republic.

The conservative papers strongly censure Gembetta's manifesto, some declaring that the real crisis has now commenced. The Republican papers warmly praise the manifesto.

The *Francaise* announces that the government has ordered the prosecution of Gambetta for his manifesto. It says the audacious reproduction in his manifesto of the phrase, "It faut se soumettre ou se demettre" [he must submit or resign], is not only a repetition of his offence against Marshal MacMahon, but as Gambetta has already been condemned therefor by the tribunal of the Seine, it constitutes an outrage against the magistracy, whose decisions are hublicly ignored.

Constantinople, Oct, 4th.—An imperial decree it published appointing Raouf Pasha to the command of the army of the Balkans at Shipka, and Suleiman Pasha to the command of the army of the Danube vice Mehemet Ali, recalled. At Shipka Raouf Pasha has arrived and assumed command.

Vienna, Oct, 6th.—A telegram from Mukhtar Pasha, dated Thursday evening, announces that the Russians were repulsed on all sides, with a loss of 5,000 killed. They have fallen back on Karajal, pursued by the Turks.

London, Oct. 5th.—A Russian bulletin says a lodgment was effected on the Turkish right flank, and a Turkish attack on the next day (Wednesday) was brilliantly repulsed and the enemy driven as far as the outer line of their camp. The Russian loss here was 300 killed and wounded. From the conflicting statements it is apparent the lodgment was not of any importance, since the subsequent assault by the Turks only resulted in being driven to the outer line of their camp. Finally the Turkish bulletin concludes: We have gained a brilliant victory, and inflicted a loss of over 5,000 on the enemy. The Russian bulletin concludes: To day (Thursday) our right flank will withdraw from the positions occupied by it Tuesday on account of the difficulty in obtaining a supply of water. The Turkish estimate the Russian force engaged against their left at thirty-five battalions of infantry and nine regiments of cavalry. Little Yaqui was assaulted five times, and taken and retaken. The movements against the Turkish right flank were so near succeeding that Mukhtar Pasha's communications with Kars at one times were actually severed. Eventually the repulse was complete along the whole line, and the Turks remained in possession of the field which was covered with Russian dead. Grand Duke Michael commanded in person.

London, Oct. 5th.—A Berlin dispatch says an imperial ukase sanctions the conversion of the shares of the capital of five of the principal Russian railways from metallic to a paper standard, at the same time reducing the state's guarantee of annual receipts to the same standard. The measure inflicts serious loss on the shareholders and creates apprehension that the measure will be extended to other lines and even to government bonds. It is said the shares subscribed abroad and in foreign gold will not be exempted from the operation of the ukase.

Constantinople, Oct. 5th.—Mukhtar Pasha telegraphs a long account of Wednesday's battle, which appears to have been indecisive. He says his outposts withdrew from Great Kamlar which is probably the position the capture of which by General Melikoff was described in the dispatch from Karajal yesterday. The Russian attacks on Little Kamlar and Kizilfape were unsuccessful. On the right the Turks being threatened by six battalions, assumed the offensive. They stormed Gladdi Dagh, and after five hours fighting pursued the Russians to Arpetchai. Night stopped the conflict. Both sides maintained their positions. Mukhtar Pasha estimates the Russian loss at 500; Turkish loss unknown. Tasile Pasha was wounded. There was no fighting on Thursday, except near Karajal of which the dispatch gives no details. The rumor that two Russian Generals were killed is unfounded.

London, Oct. 5th.—Further particulars of the battle before Kars make it evident that the Russians assaulted the Turkish positions along the whole line and were repulsed with heavy loss. The main action was fought on Tuesday. The Turkish line extended from Great and Little Yaqui, two fortified hills in Kulsikada plain, as far as Ani, on Arpachia river, with the centre advanced toward the river and resting on Kizil Tepe. The Russians, reinforced by new troops and those lately employed against the Caucasian insurgents, began battle at daybreak on Tuesday by an assault on Great Yaqui, the extreme outwork of Mukhtar Pasha's fortifications, twelve miles due east from Kars. The Turks seem to have been taken by surprise. A single Turkish battalion defending Great Yaqui was cut to pieces or captured, with the post, after two hours' obstinate defence, which gave the Turks an opportunity to prepare for the next assault. Up to this point all accounts agree; but regarding subsequent events they are very conflicting.

A Turkish official dispatch says a great battle ensued, lasting thirteen hours. Repeated Russian attacks were repulsed with heavy loss. A Russian bulletin from Grand Duke Nicholas' headquarters at Karajal, dated the 4th instant, says: "After the capture of Great Yaqui the position was so strongly fortified that the attempt to assault was considered premature. After thirteen battalions, sent from the Turks to reinforce Mukhtar Pasha, had been repulsed, our troops fortified themselves in the positions they occupied. Our loss on Tuesday was 3,069 killed and wounded; the enemy's loss not less. We captured 200 men." The Turkish account as to repeated attacks after the capture of the first Turkish position seems correct, otherwise there could not have been six thousand men killed, and the 200 captured by the Russians were probably a remnant of the garrison of Great Yaqui. The Russians also attacked the centre at Kizil Tepe, but were repulsed. Simultaneously a Russian force moving from the direction of Ani endeavored to turn the Turkish right to get between Mukhtar Pasha and Kars. This is the movement referred to by the correspondent saying hopes are entertained of cutting off Mukhtar Pasha from Kars. Of this affair the Turkish bulletin says: "After five hours of fighting the Russian force of six battalions of infantry and two regiments of cavalry were driven back and pursued to the banks of the Arpachai."

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded.* This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

The attention of the proprietor of this journal has been called to the fact that attempts are being made to induce a belief among the public that the paper is about to pass into other hands. Rumours to that effect appear to have been industriously circulated, as the proprietor has been called upon by several of his friends who, from what had been said to them, deemed themselves justified in asking why he was abandoning the enterprise. The statements or insinuations which have led to these enquiries, and which are of an entirely unauthorized character, are all traceable to a gentleman who at the outset of the present management contributed several articles to the *Japan Weekly Mail*, for which, it may be remarked, he received more than the usual acknowledgement. We had on a former occasion to contradict a statement which appeared in several of our contemporaries to the effect that he had joined the proprietorship of the *Mail*. We have now to assert that the rumours circulated by himself of this paper falling into his hands are as utterly devoid of foundation. Notwithstanding the unkind and discourteous criticism made to the proprietor's friends by its former contributor, this journal will, it is hoped, be enabled to continue its existence under the present management, without falling short of a standard of excellence as high as the unfavourable conditions of journalism in this country render reasonably possible of attainment.

The festival of the *Shokonsha*, which was held at Kudan on Wednesday the 14th instant and two following days, was this year observed with more than ordinary solemnity. This festival was inaugurated immediately after the Restoration, upon the removal of the Imperial Court to Yedo, and is to the memory or for the repose of the souls of those who fell in the civil war that ended with the overthrow of the Shôgunate. During the Tokugawa régime the two most important festivals were those of Kanda Miôjin and Sannô, in support of which special grants were allowed by the Bakufu. They were observed with much pomp and ceremony, the street being crowded with processions, in which the whole of the dancing girls of Yedo took part. After the Restoration however, these displays were no longer permitted, nor could they be sustained as the Government grant was withdrawn. Although their anniversaries are still observed they are shorn of all their former glory and attract but little attention. The place of these festivals is now filled by the *Shokonsha*, to the support of which the Government has transferred its patronage and which is now the great fête of the year at the capital. After the various civil broils with which this country has been so sorely tried, ceremonies for the repose of the souls of those who fell have always been held in various portions of the Empire. The successful suppression of the late strife in Kiushiu therefore lent to the present festival more than ordinary interest, although at the same time it was rendered usually sad by the presence of the large number of relatives and friends of those who had fallen, and by the remembrance of the terrible cost at which victory had been achieved. The ceremonies were opened by the Mikado in person on the morning of the 14th. He arrived at the temple of *Shokonsha* at Kudan, at 10 o'clock, attended by a numerous suite and by all the chief officials of the Government. After having paid his vows at the entrance, he was enthroned, and remained in the temple while the troops advanced and made the customary prayers and offerings. At the termination of this ceremony His Majesty returned to the palace, and the temple and approaches were then thrown open to the crowd, who thronged thither during the whole of the day. Enormous crowds were present, the days of the festival being observed as general holiday, all conducting themselves in that singularly orderly and quiet manner which seems so strange to the foreigner, who cannot help drawing comparisons not favourable to the conduct of the masses of his own countrymen on similar occasions. Horse races, wrestling, *Nô*, or court dances, and other entertainments were provided by the Government on a grand scale and thrown open to the public. The wrestling seemed to attract the greatest crowds, and it was almost impossible to get near the entrances of the huge amphitheatre where the display was given. The most famous wrestlers in Tôkiô and from all parts of the country were present, and great the excitement and enthusiasm which their struggles called forth. A most singular sight was presented in the interior of the amphitheatre, which was crowded to its utmost capacity, by the thousands of heads each covered with a blue cloth forming a singular contrast with the mass of brown faces, and furnishing a unique combination of colour. The scaffoldings supporting the assembled thousands looked dangerously slight in construction, consisting of light poles bound together with straw rope, but they must have been put together with marvellous skill, as there was no downfall or accident of any kind. The wind was high in the afternoon and the dust blinding, so the display of fire-works in the evening was consequently shorn of much of its attraction.

The Messageries Maritimes Company's steamer *Tibre*, with French mails on board to the 7th October, left Hongkong for this port yesterday, the 16th instant, at 6 P.M.

A letter appeared in the *Herald* of the 10th instant complaining of the verdict of "not guilty" given by the jury in the case of stabbing by Suleiman, a Malay sailor. After carefully reading the case we cannot see how any other verdict could have been rendered. There was no direct evidence whatever to prove that the prisoner inflicted the wound or that he intended to do grievous bodily harm, and although in the minds of judge and jury no shadow of doubt might exist as to the guilt of the accused, English law demands that on proof and proof alone shall a man be convicted, and in this case all direct proof was wanting. It is true that the judge might have had the prisoner indicted for common assault, though of somewhat grave nature as the injury inflicted was a serious one. But no such indictment was preferred, nor was any charge of that nature laid before the jury. In the absence, therefore, of any proof that a dangerous weapon had been used, the jury most properly returned the verdict "not guilty."

The community, or a certain portion of it, in California seems determined to do all in it's power to discourage Chinese immigration, and the employment of Chinese labour. A company has just been formed in San Francisco to supply fruit and vegetables in which Chinese are to have no hand in raising, picking or selling. Hitherto the cultivation and vending of all kinds of vegetable produce has been largely carried on by the sons of Ham, who have been able to supply the people of San Francisco with these necessaries at a price very much below that charged by the white dealer. The present vegetable league, however, proposes to deliver fresh produce at the same price as that charged by their Celestial rivals, the special advantage offered being that from the planting of the seed to the selling in the basket every operation will be conducted by white men. No one can grumble at this, and price and quality being equal, it is but fair that the preference should be given to costermongers of one's own colour. The terrible possibilities of the Mongolian invasion have, however, never been thoroughly realised until recently, and they have been brought home to the minds of the aristocracy of San Francisco with a force that cannot be ignored and which has shaken the social edifice to its very centre. At the Opera House, during a performance of "Mignon," the fashionable audience were horrified by the appearance of two Chinamen and a Chinawoman "in the inside stage box in the second tier on the right." We presume the reporter is thus particular in his description in order that the polluted box may hereafter be shunned by all right minded opera goers. Their appearance gave rise to much comment "of a decidedly hostile nature, pig tails and shaven heads" not being "an agreeable concomitant of a visit to the opera." "In the adjoining box," we are told, "sat three ladies and two gentlemen whose social standing may be inferred from the facts that Generals ° ° and ° ° called upon them during the evening and had a pleasant chat. The contrast between the occupants of the two boxes was so striking as to cause general remark." The audience was no doubt surprised that the gallant Generals should so far forget their position as to call on any body who would sit in the next box to Chinamen. We are not told that the latter in any way misbehaved themselves. They came to see, not to be seen, and had probably the good manners not to interrupt the performance by any of that "pleasant chat," to indulge in which seems to be the object of many people in going to the opera. We can quite believe that, judging from the "hostile comments" indulged in, the contrast between the behaviour of the audience and that of the Celestials must have been very striking indeed, and the visitors must have gone away greatly impressed with the behaviour of the superior opera going race among whom they had ventured to appear. We wonder what would have been said if they had turned Christians and appeared in a pew at a fashionable church?

A "chaffing" paragraph appeared in a recent number of the *World* relating how the Japanese Minister and certain of his suite were siezed by an ignorant *gendarme* at a fire at Dieppe and compelled to assist in passing the fire buckets. The writer in conclusion makes some joking remark that if a similar *contretemps* had occurred to Sir Harry Parkes in Tôkiô, the British Government would have demanded an indemnity. The whole circumstance is scarcely worth recording and would have been passed over unnoticed by any journal less "gossipy" than the *World*. The *Hôchi Shimbun*, however, most amusingly takes the matter *au serieux*, never suspecting that the whole thing is a joke, though not a very brilliant one, and thus gives vent to its "sighs and lamentations" over the weakness of the Japanese Government, as shown in not demanding immediate indemnification.

In the *Herald* of the 12th a paragraph appears headed "Rude treatment of the Japanese Minister." It seems that this refers to Uyeno Kagenori, Japanese Minister to England, and that it happened at Dieppe, in France. The *Gazette* of the same day contains the same paragraph and praises Mr. Uyeno very much for his forbearance. From a Japanese point of view, however, we are by no means satisfied. The paragraph is as follows:—

(Here follows the paragraph in question.)

"We do not know what the opinion of the *World* is, but reading it carefully, we do not see anything casting ridicule on Mr. Uyeno. Its simply praises his patience. The *Herald* (*Gazette*?) also, from the heading "News which will please Mr. Uyeno's friends," evidently thinks his conduct worthy of praise. But when we Japanese read this, and especially the last paragraph in which it is said that if it had been Sir Harry Parkes, he would have demanded an indemnity from the Japanese Government, can we avoid sighs and lamentation. Ministers to foreign countries are the representatives of their countries. The strength and weakness of their countries is reflected in them. How is it, for example, that Sir Harry Parkes never flinches an atom in his remonstrances and direct representations to foreign powers, and that the Ministers of small European powers cannot do this? It depends on the relative strength of the different countries. So that the influence of a Minister depends on the power of his country and is not personal to himself. The English Minister may insult us by demanding an indemnity, while in the case of the Japanese Minister, it only affords matter for a paragraph. This is nothing new, but it indicates the relative power of Eastern and Western countries, and as Japanese we cannot but lament it. We do not wish to blame Mr. Uyeno, but we must regret the state of the Empires of the East which allows such things to take place."

In a recent number of the *Contemporary Review* a very savage and bitterly personal attack by an anonymous contributor was made against the "Society" journals, which he calls the literature of the scandalmonger. Perhaps for certain of his strictures there is too much excuse, for it cannot be denied that some of the last experiments in the field of journalism have made their success by writing of a character unworthy of that high standard of excellence to which the British press has attained. The *World* seems to have been especially selected for attack, and in its last number the Editor, having reason to believe that Mr. Robert, W. Buchanan is the author of the article in question, thus returns the compliment.

To my private house one evening, bearing a letter of introduction from a common acquaintance, came Mr. R. W. Buchanan, then a mere youth of two or three-and-twenty, very shabby, very dirty, very 'creepy' altogether. Mr. Buchanan, is in the frequent habit of quoting Mr. Browning's phrase about a 'scrofulous French novel;' but I am of opinion, having tried both, that a scrofulous Scotch poet is a far more unpleasant object in a room. He told me of his woes, of his poverty (which was positively appalling), of the kindness, which had been shown to him and to a friend of his, another Scotch genius, then no more, by a well-known nobleman who is never tried of doing similar kindness; he made a most piteous appeal to me to give him work; and all the time he was talking he kept rubbing the fingers of one hand into the interstices of the fingers of the other in a manner which made me shudder. He talked glibly; he showed me scraps of his poems. As I listened to him, I tried to think of Burns and Chatterton; but as I I looked at him, I could not help also thinking of the practical benevolence of the Duke of Argyll, and of the vaunted virtues of Keating's insect-powder. * * * * * * *

For ten years at least I have seen nothing of Mr. Buchanan. I knew, in common with the rest of the world, that he had failed as a poet, as a novelist, as a playwright; I knew that, shielded by the mask and cloak of pseudonimity, he had stabbed some great reputations in the back, and had had his moral ulcers laid bare by the scalpel of judicial cross-examination. Further than this I know nothing. I have had no dispute with Mr. Buchanan; no word of anger has passed between us. When

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

last I saw him I was his friend; when last he addressed me I was his benefactor. But now, without word or deed on my part, all is changed. I, who stepped out of my way to do this man a kindness, and out of my own small means lent him money to buy bread for his stomach and sulphur for his back, am 'a retailer of gossip, with whom no society of respectable men, not to say gentlemen, would associate for ten minutes;' while Mr. Robert Williams Buchanan, who stings the hand that succoured him, and anonymously stabs those who saved his tainted life, is a *Contemporary Reviewer*, the *soi-disant* guide, philosopher, and friend of 'all cleanly people who respect honest literature and live earnest lives.'

Surely if this style of writing is to become popular, Mr. Buchanan's hard hitting is partially justified.

The *Mainichi Shimbun* states that it has heard the following curious report. In the great plain of Murasaki, in the Northern portion of the Empire there are a great number of very venerable foxes, many of which are four or five hundred years old, while there are some that have attained the patriarchal age of a thousand. At the end of each year these knowing animals have been accustomed to hold a kind of theatrical performance wherein are shadowed forth the various events that are to occur in the year that is to come. It is further stated that the people in the neighbourhood have been in the habit of coming to witness the spectacle, and that in former days the Daimios of the neighbouring districts sent special envoys to the plain, so as to ascertain from the performance of the foxes what was to happen in future years. If the piece played was a tragedy, or if one of the actors assumed the look and bearing of a sick man, the country during the next year was certain to be visited by war or pestilence. The terrible visitation of measles in 1862 and the restoration of 1868 were thus predicted by these animals. At the end of last month the foxes gave their annual performance, in which were represented people with sad countenances grasping large amounts of paper money; young men with excited gestures holding violent debates; the *banto* of a large mercantile establishment lamenting over the exhausted condition of his master's treasury; an assembly in great agitation loudly demanding reforms and improvements, while the oldest and chief of the foxes sat on a mound stroking his chin, and looking at the whole performance with a grin on his countenance. The editor of the *Mainichi* adds that the present year is fast approaching its close and he is anxious to know what may be expected in the next.

There is great complaint in many quarters that men do not seem so keen in pursuit of matrimony as they formerly were. And yet it would appear that there are chances awaiting the neglected fair, as witness the following advertisement, one of several taken from a leading American paper. The want of a goddess who is a decided brunette can only be supplied we fear by marrying a Hottentot Venus:—

Personal—A widower, upwards of 50, without children at home, with an establishment destitute of a presiding goddess, will correspond with a lady of 18 to 30, a decided brunette, of culture, refinement, and an affectionate disposition, and a musician withal, with a view to the ascertainment of mutual desires and the realization of them. As the advertiser is in earnest he requests triflers to interest themselves in other directions. Address, in confidence and good faith * * * * * * Times office.

From *El Diario* of Manila (a file of which to November 3rd is just at hand) we learn that Tramways are soon to be laid, whereby the principal plazas and throughfares of the city are to be connected with the populous suburbs. The scheme is not, it seems, promoted by foreign capital, but is a purely Spanish enterprise, and would, if carried into execution, prove of immense benefit to the inhabitants of the outlying districts of the capital. Permission has also been asked of the Government to construct a pier or landing stage upon a grand scale, to connect with the north mole at the mouth of the Pasig, and extending into the bay such a distance as shall secure deep water for the largest steamers and ships wishing to avail of the facility for loading or discharge. The pier is to be traversed by a tramway which will terminate at the shore end in a convenient locality for the loading or removal of cargo. This latter project would seem entirely practicable, and would greatly reduce the expense now attending the loading and discharge of vessels, and enable steamers to secure despatch, which is at present out of the question. For large vessels the anchorage is from two to three miles distant from the mouth of the river, and shipping operations are both tedious and expensive. We are glad, therefore, to see our Manila friends awakening to the importance of such a necessary work, and trust that the proposal to build a pier will not all result in *talk*, as did that of supplying the city with water, which formed a fertile theme of discussion in the local papers for years.

It is not possible to ascertain what stocks of Silk there are on the Continent, but the following particulars will show that as yet there is not any great want of the article at home. According to the *Moniteur des Soies* the condition houses of Europe have passed during the month of August this year, 639,860 kilo. of Silk, against 1,863,307 kilo. in August 1876. In London the deliveries of Japans have been 365 bales, against 893 bales for a corresponding period last year. On the 1st of September the stock of Japans at the Docks consisted of 7,999 bales, against 2,414 bales at that date in 1876. The total stock of China and Japan Silks consisted of 33,050 bales, against 16,717 bales last year.

There were no deaths from cholera reported for twenty-four hours up to midnight on the 13th instant anywhere in the Kanagawa *Ken*, neither were there any cases of seizure, and there have only been two deaths in the vicinity of Kanagawa during the subsequent forty eight hours, so that it is to be hoped that we have now fortunately got rid of the epidemic which has been amongst us for so long. The number of persons attacked by cholera throughout the Empire, from the first breaking out of the epidemic to the 10th November, was 11,675, of whom 6,297 died.

New York is not to be outdone by London, in fact she may for ought we know outshine her sister in the future. London was to have had an obelisk, indeed may have yet if it can ever be got there. There was just one left standing in Egypt and this the New York *World* announces in the largest capitals has been secured. As London possesses a liberal minded citizen in the person of Mr. Erasmus Wilson who defrays the whole cost of the transportation of the long ago presented Cleopatra's Needle, so does New York boast a distinguished resident of equally generous impulses, the only condition that he imposes being the modest one that his name be witheld. It is stated that the Khedive has offered this tribute of his respect and esteem to the chief city of the United States, and that the gentleman in question has liberally offered to pay all expenses attending its removal and transportation. If Needle is recovered and Mr. Dixon successfully carries out his plan of bringing the monolith to London, he is to be entrusted with the work of bringing to New York the sister obelisk; a matter attended with no slight risk in view of possible Atlantic gales. No steps will however be taken in the matter until the Needle safely arrives at its destination, that so we trust for the sake of the dwellers in both cities that the present state of suspense as to the ultimate fate of the obelisk may quickly be put an end to.

The *Chôya Shimbun* announces that all officers holding the rank of Colonel and Major in the Army, and those of corresponding rank in the Navy who took part in the late Southern war, are to receive the decoration of the 3rd class of the Rising Sun.

We have heard that the Kawasaka iron bridge across the Rokugo river on the Tôkiô and Yokohama railway, will be opened for traffic on Friday next, the 23rd instant.

International Exhibitions seem to be the rage, though of late they have degenerated into something very much like bazaars. According to the Australian papers a proposal has been set on foot to hold one in Sydney the year following the Paris Exhibition, that is to say in 1879. A deputation of the Agricultural Society of New South Wales has already waited on the Colonial Secretary requesting his assent and co-operation.

On Monday last a very charming entertainment was given on board the U. S. Flag-ship *Tennessee* by Captain Young and the Officers of that vessel. The weather was all that could be desired, and the numerous guests will long remember the kindness and generous hospitality with which they were received and entertained.

According to the *Cooktown Herald* a most important discovery has been made by Captain Miller of the E. A. & M. Co.'s S. S. *Bowen* of a new track between Australia and China, which gives deep water all the way and evades all the intricacies of the route hitherto followed and known as Moresby's track. It is affirmed that the new channel has also the advantages of being shorter, and free from the dangerous reefs that usually beset navigation in the Coral sea.

From the "Japan Mail Daily Advertiser."

Monday, 12th.

From the *Nichi Nichi Shimbun.*

On the 9th instant H. M. the Mikado attended at the *Daijôkwan*, where he was received by the Prime Minister and the principal officers of State, when His Majesty graciously conferred decorations of the Second Class of the Order of the Rising Sun on the following recipients:—

Lieut. General Yamada Akiyoshi, Vice Minister of Justice; Lieut. General Miura Goro; Lieut. General Tani Kanjô; Lieut. General Nodzu Shigeo; Lieut. General Soga Yujun; Lieut. General Miyoshi Shigeomi; Lieut. General Oyama Iwao, Junior Vice Minister of War; Lieut. General Kawaji Toshiyuki, Chief of Police! Lieut. General Takashima Tomoyenosuke; Rear Admiral Itô Yuma, and Rear Admiral Akamatsu Noriyoshi, Vice President of the *Genrô-In.*

As a division of the Kumamoto garrison is to be stationed at Kagoshima, telegraph wires are to connect those two cities.

During the temporary absence of the Resident Minister of Holland, who represented also Sweden, Norway, and Denmark, Holland will be represented by Sir Harry Parkes, the English Minister, Denmark by the Russian Minister, and Norway and Sweden by the Spanish Minister.

From the *Akébono Shimbun.*

At Shinagawa on the 9th instant at 7 p.m. about three *chô* of houses, in all about two hundred and eighty buildings, were destroyed by fire, which originated from a Kerosine lamp. The fire was not extinguished until after ten o'clock.

From the *Mainichi Shimbun.*

We cannot understand for what purpose so many persons visit the house of H. E. ° ° ° at Kasumigasaki, Tôkiô. even on Sundays there are many who assemble there in carriages. What can they consulting about?

Mr. Omura a *kuazoku* has received permission to try to cultivate Inba-no-numa and Taga-numa in Shimôsa. The cost of the work is estimated at 200,000 *yen.*

Tuesday, 13th.

From the *Nichi Nichi Shimbun.*

It can now almost be said that cholera has disappeared from Tôkiô, as between the 9th and 10th no new cases occured, while of the patients already in hospital one died and three recovered.

The Sugar crop in the province of Sanuki (the great Sugar district of Shikoku) was bad last year on account of drought, and again this year it has failed from the same cause. The planters are thus unable to pay their taxes, and are in a distressed condition.

On the 10th instant an entertainment took place at the Imperial Palace in commemoration of the victory over the insurgents, commencing at about 4 p.m. The Princes of Imperial blood, *Daijin, Sangi* and the high Naval, Military and Civil Officers, numbering over one hundred, were present and were regaled with tea and sweets. When His Majesty the Emperor appeared a dinner in foreign style was given. The bands of both the Army and Navy played in the garden which was illuminated with lanterns. This is the largest entertainment which has been given since the Mikado removed to the Palace at Akasaka. It terminated at nine o'clock.

Generals Yamagata, Oyama, and Colonel Ozawa were appointed on the 8th instant as a committee to enquire into the meritorious acts performed of the officers and men of the Army and Navy during the recent war.

From the *Hôchi Shimbun.*

On the 11th instant the *Tagonoura Maru* of the Mitsu Bishi Company brought back 489 policemen from Kagoshima.

Wednesday, 14th.

We have made enquiry at the *Kencho* and have been informed that no display of fireworks will take place in Yokohama either to-day or to-morrow. We fear that the *Gazette* was misinformed on this point. The Lighthouse Department alone at this place observes to-day as a holiday, the *Kencho* being opened as usual.

The Departments of the Army and Navy observed yesterday as a holiday in consequence of the celebration at the *Shôkonsha*, Kudan, of the festival in honour of those who fell on the Imperial side during the late war in the South, and will continue this holiday to-day and to-morrow. To-day, also, will be observed as a general holiday by all the Government Departments in Tôkiô in honour of this festival, which offers more than ordinary attractions, as the wrestling will be exceptionally good, and there will be a large assemblage of *geishas* for a grand *odori.* This evening a great display of fireworks will take place at Kudan, and a novelty will be introduced in the representation of some of the battles which were fought in the South. We are unable to ascertain exactly how these will be carried out, but the fireworks to be used for the occasion have been made expressly at the Government Arsenal by order of the War Department. There will be no issue of native newspapers to-day on account of this holiday, which will probably be taken advantage of very generally in Tôkiô.

From the *Akébono Shimbun.*

The different parties in Tosa were only restrained from rising in rebellion during the civil war in Satsuma by the energies of ex-*Sangi* Itagaki. There still seems to be some agitation prevailing among the numerous parties which exist in that province, some of whom are seeking to assassinate Itagaki.

From the *Chôya Shimbun.*

On the 16th instant many officers of the Army will be entertained at a dinner at Hamagoten.

From the *Nichi Nichi Shimbun.*

Those belonging to the police forces who were killed during the late war in Kiushiu were as follows:—93 officers; 23 constables of the 1st class; 106 of the 2nd class; 236 of the 3rd class; 163 of the 4th class; 87 attendants, and 18 coolies,—in all 727 men.

Thursday, 15th.

SECOND NATIONAL BANK.

(Dai-Ni Koku-ritsu Ginko.)

Statement for the week ending 10th November, 1877:—

Total Amount of notes (dollars) received by us from the *Shihei-rio*		1,200,000
On hand	690,340	
In circulation	509,660	
	1,200,000	
Reserve Fund		509,660
In Foreign money:—		
In dollars	345,215.17	
In Bank notes and cheques	84,944.83	
Deposited with Foreign Banks	50,000.00	
	480,160.00	
Do. in native currency	79,500.00	
	509,660.00	

Friday, 16th.

We were sorry to observe that the Temperance Hall was not so well filled last night as the very excellent Concert which was there given merited, and can only suppose that the public have an objection to the somewhat limited accommodation which it is in the power of the management to afford.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Thanks are due to those ladies and gentlemen who so kindly offered their assistance in behalf of the establishment, and we trust another concert will soon be projected, if it gives us a chance of again hearing those who favoured us last night. If this can be accomplished, we would suggest that it should take place in some more suitable room for music than the Temperance Hall can boast of, so that the funds of a really deserving institution may benefit more largely than was the case last night.

The concert opened at half past eight with the Overture to Fidelio as a piano-forte duet, and was followed by Mendelssohn's part song "Greeting," both of which pieces were well received, but the first emphatic burst of applause was reserved for Heller's Tarantella in A flat, which was brilliantly and correctly rendered. "Come into the garden, Maud" was then sung by an amateur who is always ready on occasions like this to render valuable assistance, and was deservedly encored. A piano-forte solo was next given, being followed by Arthur Sullivan's song "Will he come," which was charmingly sung and warmly received, and was succeeded by a duet for violoncello and piano. Then came the gem of the evening, the trio from Athalie, "Hearts feel that love thee." Faultlessly sung, it was loudly and deservedly applauded, and the repetition which was demanded gracefully conceded. The Finale to Haydn's Symphony in C. Major, given in a masterly style, closed the first part.

There was no falling off in the second part, although it was shorn of some of its attractions owing to unavoidable absence through indisposition of one of the performers. A piano-forte duet, the Scherzando Vivace from Weber's Rondo in B flat, followed by Chopin's Polonaise in E were both thoroughly appreciated, and were followed by a charming duet for violoncello and piano, and another piano-forte solo, a movement from Schubert's Sonata in A minor. Then came one of Henry Smart's many graceful pieces, the trio "The Autumn Violet," which was loudly encored as it deserved to be. The concert concluded with the Overture to Massaniello as a piano-forte duet, capitally played by two gentlemen who throughout the evening had rendered great assistance, and in no small degree contributed to the decided success of a concert which deserved to have been more generally attended.

From the *Nichi Nichi Shimbun.*

After the ceremony of closing the Uyéno Exhibition on the 30th instant, at which Their Majesties the Emperor and Empress will be present, a grand display of fireworks will take place.

A letter has been received from Korea stating that an Exhibition has been opened by the Japanese merchants at Fusan, and numerously attended by the Koreans.

From the *Hôchi Shimbun.*

The men-of-war which were ordered to be built in England for this country have been completed, and will shortly start on their outward voyage. The cost of the same is over one million *yen.*

As the Chinese Ambassador will shortly arrive at Hiogo, the *Kencho* has purchased a carriage for six hundred *yen* to be used for his reception.

From the *Akébono Shimbun.*

On the 17th instant His Majesty the Mikado will visit the Bureau of Paper Money.

A report was recently current that such district officials as the *Kochô* in Kagoshima *Ken* were elected by the people, but we now regret to state that such is not the case, for those men who were termed official toadies by the Private School Party and who were despised by them in consequence, have been appointed by the *Kencho* to such offices. As these men have unexpectedly attained power, they are said to act very arrogantly.

Saturday, 17th.

We are requested by the Acting Superintendant of Foreign Mails to say that, owing to the early hour to-morrow at which it is necessary to close the mails per *Oceanic*, the Post Office will be kept open for the accomodation of the public until 11 o'clock to-night.

We are also desired to notice that by latest advices the Argentine Republic (which was reported a few weeks since as having been admitted into the General Postal Union) has been unable to put the Treaty of Berne into effect, and therefore correspondence addressed to that country will again be subject to its former rates, as given in the Table of Foreign Postages.

We have to acknowledge the receipt from the *Japan Gazette* office of the Race Book for the forthcoming meeting of the Yokohama Racing Association.

From the *Nichi Nichi Shimbun.*

Kagoshima is still strictly guarded by police, and a man-of-war lies in the harbour. At the time of Saigo's second entry into the town, many people took advantage of the confusion which thereby ensued to commit thefts and other offences, for which they are now being sought out, and, when arrested, duly punished.

On the 18th instant Her Majesty the Empress will visit the Paper Mill at Ôji, Tôkiô.

The *Okurasho* has sent 20,000 *yen* to the Nagasaki *Kencho*, for the purpose of covering the expense of forwarding the rebels who have been sentenced to hard labour to the various destinations where they are to serve out their sentences.

There is a great demand for Mr. Kishida Ginkô's eye medicine in Korea. Rice has fallen in price, but hardware, *kôshiu kaiki* (silk cloth) and foreign cotton cloth finds a good market.

From the *Mainichi Shimbun.*

All the policemen in Yokohama are to wear a metal plate on their caps bearing their name in full in roman characters.

CHRISTIANITY IN JAPAN.

A PERUSAL of Mr. GUBBINS' thoughtful paper on the "Introduction of Christianity into China and Japan," lately read before the Asiatic Society, and of the pertinent observations of Mr. SATOW made in the course of the discussion that followed the reading of the paper, cannot but suggest the enquiry whether the prospects of Christianity in this country are at the present moment of such a kind as to encourage the hope of its teaching being favourably received by any considerable portion of the Japanese people.

Without statistics showing the progress made of late years by the various missions established in different parts of the Empire, accompanied by precise information as to the principles on which they are drawn up, and a statement of the tests applied to distinguish the true from the apparent convert, it is of course hard to answer such a question in a wholly satisfactory manner, and the only possible forecast of the future of Christianity in Japan is one based upon general considerations and upon the past history of missionary work in the East, in arriving at which Mr. GUBBINS' suggestive essay will be found an invaluable help. Whatever extrinsic obstacles may now exist to the spread of Christianity in Japan they are not of a political nature. The Government, indeed, appears to regard the subject with an absolute indifference, and one of the strangest among the many strange turns we have seen taken by Japanese policy during the last ten years, is the sudden and complete abandonment of hostility to a religion for more than two centuries proscribed with equal animosity by all parties in the state. Mr. GUBBINS is not, however, altogether correct or even quite fair in his assertion that Christianity in this country now stands upon its own merits. The distrust with which it was for so long a period viewed by the Government came at last to be shared by the people, and the peasant who in the 17th century became an easy and willing convert, and even, if we may credit history, a steadfast adherent of the new faith through the phases of a bitter and bloody persecution, has learned to regard with dislike and aversion any attempt to bring him out of the thick mist of superstition in which he is enveloped, into the light of Christianity. The better educated classes of Japanese present the almost unique spectacle of a society destitute of any religion whatever, and equally unprovided, for the most part, with any moral or philosophical system that might with them, as with the Stoics and Epicureans of ancient times, or the Confucianists and Positivists of our own day, hold the place of a religion. The religious sentiment—not including in the expression the mere superstition of fetishism or unsymbolical idolatry—where it exists, may be with comparative ease guided and developed. A moral philosophy is sure sooner or later to gather round it an emotional halo, but the creation of either the one or the other is the work, partly of time, partly of such master minds as only at long intervals make their appearance upon the world's scene, a Moses a Socrates, a Confucius or a Shaka. Reformers of mankind produce no real results with a *tabula rasa;* the seed they sow must fall upon ground more or less prepared or it germinates not. The Japanese mind seems to be wholly materialistic in the coarser acceptation of the term. No religion traces its origin to Japan, no philosophy ever arose there. What philosophy the better classes have any notion of is borrowed from China, and has received no development at the hands of Japanese commentators. An already debased form of Buddhism was introduced into the country from the Middle Kingdom, either directly or through Korea, and its theology probably has remained almost entirely Chinese. The Japanese mind is receptive, dexterously imitative, but neither assimilative nor creative. The literature is an echo of that of China with some local colour. There is more poetry in a Spanish ballad or a Provençal *roman* than in all that the pun-loving poetasters of this country ever wrote. The explanation of this intellectual poverty is be sought in the history of the Japanese people, not in any essential inferiority in the Japanese mind. But their want of the emotional and mental culture, without which the merits of Christianity cannot be appreciated, is a most serious obstacle in the path of the missionary. Christianity does *not* stand on its merits with the Japanese, for they are too blind as yet to see its merits, however skilfully those may be expounded. An unintelligent conversion is worthless, both unreal and evanescent. That it is wrong to steal or to murder, all men readily recognise. But the peculiar virtues of Christianity, such as the sublime quality of charity, can only find acceptance with minds familiar with the teachings of a high moral culture, if not themselves so cultured. The Japanese seize with ease upon the too frequent errors of method committed by those who advocate, and of conduct committed by those who profess the doctrines of Christianity; its pre-eminent excellencies they are unable to understand and cannot therefore approve. We do not say that no Japanese is capable of comprehending the beauty of the religion of Christ; our position is that no considerable recognition, in a true and real sense, even of its moral side, is possible until the moral *milieu* in which the people pass their lives shall have undergone a transformation—not to be effected in a few years, probably not even in a century. We purposely refrain from touching upon the mysteries or dogmas of Christianity; what we have in view is the difficulty of bringing its high morality home to the Japanese mind, debased by long years of supersitition and oppression, and enfeebled and narrowed through two centuries of supineness and isolation. It is unjust to impute the small progress made by the European and American missions to want of zeal or misdirection of effort on their part. We have shown that the ground is not ready for the seed, but we are convinced that good work is being done by earnest and faithful men, who are diligently preparing the way for the reception of the morality, if not of the doctrines of the Christianity of the future. The vulgar abuse of missionaries in general, too common in the mouths of Eastern residents, is as stupid as it is unmerited. While their failures are scornfully pointed at their successes are treated with indifference, and the services they render to the world in increasing our knowledge of its less known countries, of their language, natural history and geography, and as pioneers of civilization, rarely meet with a generous recognition. Whatever opinion may be held as to the value of their dogmatic teaching, that of the secular and moral instruction with which they take care that it shall be accompanied, admits of no doubt, and there are few races out of Europe who do not owe a deep debt of gratitude to the patient and disinterested men who, impelled by a sense of religious duty, have abandoned

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

their homes to labour in remote lands for the advancement of the material and moral well-being of their populations.

For the moment, the teaching of all forms of Christianity is, as we have said, viewed with indifference by the Government. But this condition of things cannot be permanent, and when the results of missionary work shall attain a certain degree of importance, the political consequences of the spread of Christianity will be sure to excite the attention of Japanese statesmen. Whether, following the wholesome example of the United States, they will accord an equal recognition to all forms of Christianity, it is of course impossible to foretell, but probably such will be the policy adopted. At all events, no special favour is likely to be shown to Catholicism, the antecedents of which in Japan, as well as its combatant attitude in Europe, are calculated rather to arouse the apprehensions than to attract the preference of a despotic Government.

Politically, then, Catholicism will be somewhat at a disadvantage, but nevertheless will, we think, achieve greater results than Protestantism. The similarity of its ceremonial to that of Buddhism is one circumstance in its favour, but of less importance perhaps than is generally supposed. But the Catholic Church does not so much require its votaries to understand as to accept its mysteries, and throws upon the priesthood almost the whole burden of the difficulties which the Protestant is left to solve by himself. The convert who practises the outward observances of the Catholic Church, and submits his intellect and judgment in spiritual things to the control of the Church, will be reckoned a very good Catholic, and it needs but little education or culture to enable him to fulfil these requirements. The Protestant neophyte, on the other hand, is in a very different position. Few outward observances will be demanded of him, but he will be expected to understand and master some, at least, of the mysteries of dogma. Catholicism asks simply for passive acceptance of the faith Protestantism requires an active intellectual comprehension as well as a reception of its dogmas. At least this is what true Protestantism is bound to require. Its priests may assist their congregations to find the faith, but cannot find it for them, while the Catholic takes this or that dogma at the hands of his Church, and is enjoined to accept it while he is forbidden to exercise his judgment upon it. Obedience to the Church is the main duty of the Catholic, between whom and God the Church stands, less as an intermediary than as a deputy of the Deity. Hence, so far as dogma is concerned, it is much easier to become a Catholic than a Protestant, and we should expect to find in a little-cultured race, unfamiliar with Western modes of thought, a much greater readiness to embrace tenets which need simply to be received, than such as need to be to some extent understood as well as accepted. No doubt it is as easy to become a Protestant in appearance as it is to become a Catholic in reality, but no religion can properly be said to extend itself by mere increase of apparent believers. Converts, however, whom a consistent Protestant would look upon as such in name only may with perfect consistency be regarded as such in reality by a Catholic. The faith accepted blindly is often more permanent than that believed in only after examination. The retention of a faith, too, is much aided, in ordinary minds, by the practice of multitudinous observances connected with it, and by the confident declarations of constituted authority. On these grounds we can easily understand both the rapid spread of Catholicism among an intelligent but not cultured people, and its hold upon their minds when once accepted; and the seeming paradox of an unreal belief being sometimes more durable than a real one is explained.

In what we have said we have had no intention of instituting any such comparison between Catholicism and Protestantism, except so far as was necessary to explain the superior success of the former as a proselytizing religion. From a purely moral point of view, however, we are inclined to rate Protestantism somewhat higher than Catholicism, which involves intolerance as a logical consequence of its doctrine—a vicious error into which the truly consistent Protestant ought not to fall. What we have said about Catholicism applies in great measure to the Greek Church in Japan, the relations of which towards Catholicism are somewhat similar to those of the latter towards Protestantism.

Lastly we are persuaded that no considerable success can attend the labours of missionaries in this country unless politics are rigidly eschewed, the language diligently studied, and a mission school system inaugurated—or, if already in existence, maintained and developed, providing a good European secular education. It is not enough to induce the ignorant peasant or labourer to be baptised and attend Church or chapel. What middle class there is in Japan must be made some impression upon, and this can only be effected by tempting the youth to attend the schools by the offer of a useful European education, and waiting patiently for the results of such a preparation of the mind of the rising generation, for the reception of the morality and religion of the West.

The paramount importance of a mastery of the language is not, we think, sufficiently recognised. It can only be acquired by a close intimacy with the people, distasteful to most Europeans, but it is, in our opinion, an indispensable condition of success. Nor must the philosophy and literature of the Japanese be neglected; without a fair knowledge of both the preacher or teacher is only half-armed for the struggle with ignorance, conceit, prejudice or intelligent disbelief, and is unable to appreciate the condition of mind to which those whom he has to persuade, refute or teach, have been brought by the traditions and influences which have surrounded them from their birth. The task of the missionary is, and will long remain, a difficult one, notwithstanding the removal of political restrictions. The Japanese appear to have lost all relish for every pursuit except that of wealth; their own art and literature they contemn, and the works of China's greatest sage they study only as a means of becoming proficient in their own language. To all spiritual things they appear utterly indifferent, and it is difficult to procure even a hearing when a subject of no political or utilitarian interest is proposed to be discussed. The present generation, contrary to Horace's maxim, hold that only

..... *Possidentem multa.....*
Recte beatum.....

and we must wait for the next generation to see that real advance in civilization which will render an appreciative acceptance of some form of Christianity possible on any extended scale.

SPIRIT OF THE JAPANESE PRESS.

The Balance of Trade.

("Nichi Nichi Shimbun," November 13th 1877.)

For several successive years our Exports have been insufficient to make up the value of the Imports from Foreign countries. The excess of Exports over Imports which fortuntely appears in the statistics from July 1876 to June 1877, was owing to the failure of the silk crop in Europe. It was like the gain from selling off rice in a year of famine, and cannot be looked upon as the rule for ordinary years.

The *Chôya Shimbun* is much distressed over the deficiency, and tries its best to discover a remedy, but its arguments are too theoretical, and removed from practical considerations. Even if the revision of the Treaties should place in our hands the right of altering the Custom's duties at our pleasure, we apprehend that it may be found in practice impossible all at once to restore the equilibrium of Trade.

We beg the *Chôya* to look at the Tables of Exports and Imports, and observe what are the chief articles of Import. They are Shirting, Yarn, Cotton and Woollen Mixed Fabrics, and Sugar. As we have observed on a former occasion, even last year when we had a excess of Exports over Imports was not the value of the three articles of Imports viz. Shirtings, Yarn, and Cotton, and Woollen Fabrics, 14,702,195 *yen*, while our Silk amounted to only 14,016,039 *yen*, and this too in a year when high prices ruled in the Silk market? It is clear that in ordinary years the Export of Silk does not balance the Import even of the two staples, Shirtings and Yarn. If as the *Chôya* recommends, a general system of protective duties so contrary to financial principles were initiated, and heavy duties levied on Shirtings and Yarn, we do not believe that such a measure would have the effect of checking the Import of these articles. Our grounds for this opinion are that in the present condition of things the Japanese nation, rich and poor alike, prefer Shirtings and fabrics woven from foreign yarn to Japanese made cottons, for the reason that the former are finer in texture and also cheaper. Now if a heavy tax were indiscriminately laid upon these articles on the ground that their Import inflicts a loss upon this country with what object would this be done? Would it be with the object of raising the price of them, and preventing the people from using Shirtings for everyday wear. Observe, however, the actual state of things. When the people have acquired a liking for these goods, they will certainly not be prevented from buying them by a slight rise in prices. Nor is it possible by such expedients to procure the permanent public favour for articles which they have once abandoned from dislike, and to substitute for the cheap and fine Shirtings a Japanese fabric dearer in price and coarser in quality. Our inference from this state of things is that we ought to wait until a Shirting and Cotton manufacture springs up in this country, and as soon as it promised to be successful and not before, to impose a temporary protective duty if circumstances required it.

The *Chôya* makes a great fuss about the advantage gained by China in her trade with this country. According to the Import and Export Tables, the Imports from China exceed the Exports to that country by 600,000 or 700,000 to a million *yen*, principally owing to the Import of Sugar. Last year, for instance, our Export to China amounted in all to 2,065,784 *yen*, while the Imports from that country amounted to a value of 3,161,584 *yen*, showing an excess of about a million or a proportion of 2 to 3. So that we are better customers to China than she is to us. All this is owing to the large amount of Sugar imported. Now the Sugar is very much in the position of the Shirtings as stated above. Its consumption is not to be stopped by high duties.

It would therefore appear that in practice it is impossible to reduce the consumption of Shirtings, Yarn, Cotton and Woollen fabrics, and Sugar, and knowing this to attempt first to diminish the importation by protective duties, and afterwards to cause the production of these articles at home, would be a preposterous proceeding, if we wish to begin at the production of these articles, and afterwards impose temporary protective duties. There is no country in the world rich enough to sell all its produce and to pay all the price in coin. Commerce is after all reducible to an exchange of commodities. We should therefore endeavour to increase our exports as much as possible. If the idea of putting a decisive check upon importation is not mere folly, what is it? Rather let the people be encouraged to increase their production and let the Government boldly remove the present impediments to Export by abolishing the Export duties. So long as these are retained, it is useless to lament the want of equilibrium in our commerce.

Decorations.

("Osaka Nippô," 10th November.)

We stated among our locals yesterday that H. I. H. Arisugawa-no-Miya had received a decoration of the first class of the order of the Chrysanthemum, while generals Yamagata, Kuroda, Admiral Kawamura, and their Excellencies Okubo, Okuma, Ogi, Terashima and Ito received decorations of the first class of the order of the Rising Sun.

During the years of Meiji that have elapsed since the Restoration the Government has compiled a code of national laws, and in consequence of the progress of the nation, Japan of the present day can no more be regarded as the Japan of ten years ago. These great changes have being effected by the great efforts of the of the above named men. It was they who brought about the Restoration, and who have ever since conducted the administration with such judgment. For those who laboured and died for their country, nothing can be done, but it is only right that those who are still living should be rewarded for their deeds. H. E. Kido had a decoration of the first class conferred on him at the point of death, and as the other *Sangi* have equally deserved such honour on account of their meritorious deeds, we are glad that it has been bestowed on them.

The war in the South which has recently terminated was indeed a great war, and caused far more anxiety to the Emperor and suffering to the people, than the contest in which the Imperialists overthrew the *Bakufu*. The suppression of the rebellion is due to the admirable management of the leaders, and it may therefore be supposed that the decorations have been bestowed on them for their energetic action during the war. If we look at the order in which the decorations were bestowed, we shall find that Arisugawa-no-Miya is at the head, and is followed by their Excellencies Yamagata, Kuroda and Kawamura. These last three being Advisers of the Commander-in-Chief, were of course most efficient in suppressing the war, and therefore took precedence of all the other *Sangi*, while Okubo's merits consisting in his controlling the Interior and preventing others from rising and joining the cause of the rebels. Okuma had a scanty treasury under his control, but still he never lacked the means of transporting men and munitions. Ogi was chief judge, and meted out strict justice to the traitors. Terashima kept up the intercourse with foreign nations, although the country was distracted with civil war. Itô controlled the railways and telegraphs, and moreover travelled from Tôkiô to Saikiô and Osaka, and aided Okubo in managing affairs connected with the war. It is not therefore so much on account of their services at the time of the Restoration, as for their conduct during the rebellion that these gentlemen have been honoured by decorations.

Previous to this, their Imperial Highnesses Arisugawa, and Higashi Fushimi-no-Miya, and their Excellencies Sanjô, Iwakura, Saigo Yorimichi, and Kido had pereviously received decorations of the 1st and 2nd class. By and bye deserving officers of the army and navy will probably receive orders of merit, although of a low class, for since they have performed many praiseworthy actions they cannot well be overlooked.

Japan is merely a small half civilized country, and has enjoyed its present form of Government for a few years only, but behold, she has honoured over ten of her subjects with decorations of the first class! What could redound more to the honour of a country?

We hear that in Russian these decorations are so recklessly bestowed that when a man really does something worthy of such acknowledgement, the conferring of the order is almost valueless as a reward. The same thing, we believe, occurs in France. In Japan we have already enumerated those who have received the decoration of the 1st class. But the recipients are those notable personages who created the present Government and still maintain and administer it with such earnest resolve. No person, then, can for a moment liken their decorations to those of Russia or France.

And the reason we have alluded to these countries is merely to compare their condition with our own. At all events we would recommend everyone to work zealously and fit himself to be honoured with a first class decoration. Oh! how brilliantly these new orders shine! How fine they are! How charming!

Neglecting the Great for the Little.

("Kinji Hiyoron," 8th November.)

One of the best steps that can be taken in governing a country is to open a road by which public opinion can be made known to the rulers. To this end a representative assembly should be established. Though a person may be found possessing the highest abilities and mental culture, such qualities must be limited,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

while the affairs which make up the concerns of a nation there is no limit. It is clear that it is no single individual can be found who is capable of governing unaided. Those therefore to whom the Government of a Nation is entrusted should listen to public opinion before they carry out their plans. It would involve too much trouble to ask the opinion of every man in the country, and hence the necessity of representative institutions.

The Emperor on his restoration announced that the administration of the Government should be carried on with due regard to the opinion of the people, and in 1875 His Majesty established the *Genrô-In* and the *Daishin-In* issuing at the same time a decree that a limited form of Government would be instituted. A meeting of the governors of various districts in Japan then took place in the capital. Now although we thought at the time that it was strange that the executive officials as governors should act as representatives, and did not approve of the constitution of this assembly (*Chihokuan Kuaigi*) we cherished the hope that out of this might arise the true foundation of a people's assembly.

Last year the assembly was postponed on account of the Mikado's visit to the north. This years the officials of the various *ken* are occupied with matters concerning the National Exhibition so that no meetings have been held. We are at a loss to understand why the Government should be indifferent to matters that concern the whole country. It is not called upon to incur any expense, and why therefore should it not endeavour to ascertain the opinion of the whole nation?

The new methods of collecting taxes which the Government is seeking to enforce will doubtless prove beneficial to the farmers in future, but it should bear in mind that customs which have existed unchanged for hundreds of years cannot be abolished at once by a single notification. Hence arises much complaint among the agricultural classes, and riots have occurred among the farmers of the Ibaraki and other *ken* which have resulted entirely from these hasty measures.

Should the Government permit the local officials to assemble and consult as to these reforms, and whether it is advisable that taxes be paid in kind or in money, we believe that much benefit would accrue to the country. Such questions are of greater importance than those which they were called upon to discuss the year before last.

Can the non-meeting of the local officials at the capital this year be accounted for by the outbreak in Kiushiu? Scarcely, for the rebellion did not interfere in the slightest degree with the preparations for the Exhibition which was opened some thirty-four days before the close of the war.

Which is of most importance; the assembling of the local officials or the Exhibition? This question can easily be answered without giving reasons. But the Government has this year opened an Exhibition but called no assembly. It is plain therefore that it looks upon the Exhibition as of most importance. How strange! We cannot understand it. The Exhibition is for the promotion of industry and fine arts; the assembly concerns the country and interests of the whole Nation. The latter is of incomparable value. It is then indeed strange that the Government should not call together the local officials when they were already in the Capital on matters connected with the Exhibition.

We were going to finish our article at this point, but an intimate friend of ours came in and after reading over the rough draft remarked: "Your argument is poor, and also your statement about the Government deeming the Exhibition of more importance than the assembly. The fact is that the Government disliking oligarchy, wished to let the people have a voice in the administration, but as they are not sufficiently advanced to be entrusted with such power, an assembly of local officials was appointed to take place in order to teach the people how they should act. There was still another object. As the local officials were men acquainted with matters immediately under their jurisdiction, the Central Government thought they would be good guides, and therefore ordered them to assemble at the Capital. It would seem, however, that the results of the meeting could not have been very beneficial, and as people are improving daily, the Government foresaw that they would soon be able to form their own representatives instead of being represented by local officials. For these reasons the assembly has been discontinued." Hearing this we replied we should no longer feel sorry that no assembly of local officials had been called.

We learn, on reliable authority, that Mr. O. B. Bradford, late U. S. Vice-Consul General at Shanghai, will, on the expiration of his present sentence, be further charged with embezzlement, extortion, perjury, and malfeasance in office.—*Shanghai Courier.*

THE INTRODUCTION OF TOBACCO INTO JAPAN.

By Ernest M. Satow, Esq.

Read before the Asiatic Society of Japan, on the 10th November, 1877.

Various dates are assigned to the introduction of tobacco into Japan by different native writers. Kaibara Yoshifuru in the *Wajishi* (和事始, vol. IV. p. 7) says "it first came to Japan about the tenth year of Keichiyan (慶長)," that is, 1605 of our era; but he does not explain whether he means the dried leaf fit for smoking, or the plant itself for purposes of cultivation. The next authority in point of antiquity is the Japanese Encyclopædia (和漢三才圖繪) published in 1714, in which work (vol. 99, p. 20 verso) we find the statement that "Tobacco seed was first brought as tribute by the ships "of the Nañbañ in the chronological period Teñ-shiyan (天正)," that is to say, between 1573 and 1592. Nañbañ, or Southern barbarians was applied to the Portuguese of Macao and Spaniards of Manila, as well as to natives of other countries who came to Japan in the train of those nations (the Dutch and English excepted), but as the first Spanish mission under Lupo de Liano did not arrive before 1592, the last year of this chronological period, it is safest to limit the use of the term here to the Portuguese. From 1573 to 1592 is a long interval, but we have no means of fixing with greater precision the date here implied. The Encyclopædia proceeds to state that "it was planted on a hill (東土山) near Nagasaki." A rather rare little work entitled "Notes on Tobacco" (煙草記), by an anonymous author, which bears the date of 1756, quotes the account given in the Encyclopædia, and repeats after Kaibara that it was "first "brought to our country by the Nañbañ men during the period Keichiyan," or between 1596 and 1615. The same book mentions further a story of the first importation having been made from Korea, also during Keichiyan, and adds a statement that the officers and men of Hideyoshi's expedition against Korea, having learnt to smoke whilst on service, brought tobacco with them when they returned home. In the *Enroku* (蕪錄), a very elaborate work on the subject of tobacco, written in Chinese by a Japanese author, Ohotsuki Banzuwi, the preface of which is dated 1797, a previous author is quoted, who states that tobacco was first planted at Nagasaki, in a locality called Sakura-no-Buba, in 1605, and several authors concur in giving this date for the commencement of its cultivation. The family records of a doctor named Saka Jiyauchi-In contained (in 1815) two or three passages * which help to fix the date. In 1607 there is an entry to the following effect: "Of late a thing "called tobacco has been in fashion. It is said to come "from Nañbañ. Broad leaves are cut up and lighted, "and the smoke is swallowed." Under January—February 1609 there is a further entry: "For the last two or "three years an article called tobacco has come from Nañ"bañ, and all classes of Japanese amuse themselves with "it. It is said to be a remedy for all diseases. But on "the other hand, cases have occured of persons falling ill "who had inhaled it, and as no medical work contains any "directions for the treatment of such patients, no medicine "could be administered to them." An author who writes under the assumed name of Touya Sanjin (東野山人) says: "1605. This year tobacco was brought in the "ships of the Nañbañ men, and was sown. The inhabit"ants of the capital vied with each other in inhaling it, "and it eventually spread over the whole empire." In *Me-zamashigusa* (printed 1815) there is quoted a statement that in the Registers of Land Assessment of the town of Idzumozaki in Echigo the term 'Tobacco-dealer' occurs as far back as the years 1578 and 1579, so that, if this be exact the leaf must actually have been an article of commence at that time. We shall perhaps be safe then, in assuming, in spite of the Encyclopædia, that tobacco began first to be cultivated in this country at the commencement of the seventeenth century but that it was imported as an article of commence a couple of decades earlier. There can, of course, be little doubt that the

* Quoted in the Me-zamashigusa and 嬉遊笑覽 M.S.

earliest Europeans who touched the shores of Japan, namely the Portuguese, might have made the use of the herb known to the inhabitants, seeing that it had been discovered by Columbus in 1492, fifty years before the date assigned by the native chronologies to the voyage of Pinto and his companions.

Before many years had elapsed the practice of smoking became very popular, and excited the apprehensions of the rulers of Japan. It is said, on the authority of a fragment of a lampoon which has been preserved, that Hideyoshi made a law against tobacco. Dr. Saka's family journals already referred to, say that in the year 1609, there existed at the capital two associations of turbulent spirits called the Bramble Club and the Leather-breeches Club, whose chief amusement was to provoke quarrels with the peaceable inhabitants. The Brambles chose their title as symbolic of their love of mischief and the tenacity with which they held their victims, the Leather-breeches indicated by theirs that they considered themselves quite a match for their rivals. More than seventy of them were arrested suddenly, and thrown into prison, but justice was satisfied by the execution of four or five ringleaders, and the rest were pardoned. As these societies were originally tobacco clubs, the plant through their misconduct became obnoxious to the authorities, and the use of it was prohibited. These roysterers smoked out of very long pipes, which they stuck in their sashes like a sword, or had carried behind them by a retainer. Here is the portrait (Pl. 1.) of such a pipe-bearer thirty years later, taken as he was accompanying his master home from the bath. It shows the style fashionable in the chronological period Kuwanei (1624-1644) after the edict against smoking had been revoked. The tobacco pouch is tied on to the stem.

In 1612 a proclamation forbidding trade in tobacco was issued of which the following is a translation:—

"Tobacco-smoking is forbidden. The property of both offenders shall be granted to the discoverer of buyers and sellers thereof. If any one is caught conveying it by road, the tobacco and the seller must be seized on the spot and a report be made to the authorities; upon which the horse loaded with it and the [rest of the] merchandise shall be given to the discoverer.

Item....Tobacco is not to be cultivated anywhere.

The above order is to be promulgated without fail through all the dominions of His Highness (御領内). This has been decreed by him, and consequently the above notification is made, 8th month, 6th day, 17th year of Keichiyan" (1612).

The Shiyaugun Hidetada in 1615 again issued a Decree against tobacco, and the prohibition appears to have been repeated several times, but without effect. Its subsequent removal is attributed to the following stanza of Japanese poetry composed by the Mikado Go-Midzū-nowo, who abdicated in 1629.

Mokudzu taku
Ama naranedomo,
Keburi-gusa,
Nami-yoru hito no
Shiho to Koso nare;

which may be literally rendered

The smoke weed
Becomes the salt
Of the people who come in waves,
Though they are not fishers
Who are burning seaweed refuse.

The word *shiho*, salt, may also mean that aimiability which should flavour social intercourse, and which the pipe is considered to promote in a high degree. There appears to be some process, alluded to in this stanza, by which table-salt may be obtained from the ashes of seaweed. There is a variation of this stanza ascribed to the Mikado Reigen (1663-1687), given in the *Enroku*, Vol. 3.

Some years later, in 1551, we find the use of tobacco already recognized as legal by a notification forbidding people to smoke outside of their houses. One of the chief motives which are said to have prompted the anti-tobacco law, was the idea that the cultivation of the plant would interfere with the production of rice and corn, and this is confirmed by an order given in 1667 that tobacco was to be planted in lands specially reclaimed for the purpose, which order assigns the reason already given. Tobacco was also feared because fires had frequently occurred from carelessness in its use, and further, there was a notion that it was prejudicial to the general health.

It may be noted here that a decree issued in China in 1638, when the Ming dynasty was tottering to its fall, threatens with decapitation and exposal of the head after execution, any person found guilty of trafficking in tobacco with the 'outer barbarians.' This expression would naturally lead us to conclude that the plant was unknown to the Chinese previously to the dried leaf being imported as merchandize by Europeans. The celebrated traveller and naturalist Pallas, in a passage which has been quoted over and over again, argued that the use of tobacco for smoking in China must be more ancient than the discovery of America, the grounds of his opinion being chiefly the almost universal prevalence of the custom among the Chinese and Mongols, the form of their pipes,' 'which the Dutch seem to have imitated,' and the peculiar manner in which the dried leaves are prepared. Botanists inform us that the plant which furnishes the Chinese tabacco is said to grow wild in the East Indies, and differs from the Virginian tobacco.† But Chinese literature affords evidence that tobacco was introduced into China by European traders. The Public Library at Asakusa possesses a manuscript entitled "Tobacco Memoranda" (煙草錄), which is a collection of poems by Chinese authors in praise of tobacco. Among these I find firstly, under the title of "Heavenly Fragrance" (天香) the following lines:

"Smoke weed, not mentioned in the Record of Shên Nung,
"In the end of the Ming it appeared, from Luçon outside the Min sea,
"They transported and planted it in the central land,
"And its name was called Tan-pa-ku."

Another piece begins:

"The fragrant sprouts of Min island,
"The green herb of the rude barbarian,
"Has been planted everywhere in the emerald gardens,
"A little is treasured up in a bamboo casket;
"First it came by the sea-ships".....

In a third poem there is the line:

"Its modest name was brought from Luçon."

Another commences thus:

"Luçon produces smoke weed."

And a fifth opens with:

"The strange seed was not in ancient time,
"But *paku* has spread over the whole land,
"The divine root is plentiful beyond the seas.
"They transplanted it from the south of Chang,
"How should Wupu ever have known it,
"Nor did Fungchuin find it out."

A poem in honour of the areca-nut says, indeed; "Of old I have heard that smoke-weed grew in Liaotung," but the date of this composition is not given, and its authority weighs little against tbe explicit statements previously quoted. The name tobacco variously translated, by 淡婆姑 (pronounced *tan-pa-ku*) and 淡巴菰, occurs over and over again in this collection, and much more frequently than the Chinese translation 'smoke-weed.' To this evidence may be added the fact that the Manchus, who are more likely to have learnt the use of the herb from the Chinese than from any other nation, have no other name for it than *tampako*.

A Chinese author cited in the *Euroku* speaks of tobacco being first known in Japan, while another says that the first notice of it known to him, occurs in a Corean history, from which it would appear possible that tobacco may have been introduced from Japan through Corea into the north of China about the same time that it began to be imported from south by way of Macao. It has been stated by a Chinese writer, when and where I cannot ascertain, that smoking was rare in China in the begining of the seventeenth century, but had become common about thirty years later.

In the Corean vocabulary given by Von Siebold in the Nippon, Bd. VI. Abtheil VII. p. 34, *tampa* is given as the equivalent of tobacco in that language, while Klaproth in his translation, Aperçu Général des Trois Royaumes, has *lampako*, but his pronunciation is probably

† See Johnston's Chemistry of Common Life, 1858, vol. I. p.p. 9—12.

derived from a Chinese source. In Loochoo, if a manuscript vocabulary in my possession may be trusted, *tabako* is the word used,—evidently borrowed from the Japanese.

It appears doubtful whether the pipe was introduced into Japan together with tobacco. We find it stated that the dried leaf was at first rolled up in a piece of paper, in a conical form, the tobacco being placed in the larger end of this sort of cigarette. To this day there are localities where tobacco, instead of being consumed in a pipe, is rolled up in a leaf, generally of the camellia japonica, and smoked like a cigarette. This practice may be seen in the island of Ohoshima off Kishiu, and is said on good authority to be common on the adjacent mainland. The next step was to scoop out one end of a section of slender bamboo, and to place the tobacco in this widened part. Such a pipe is still in use among the fishermen of Loochoo. Finally foreigners brought pipes to Nagasaki, which the Japanese imitated in copper and other metals, modifying the shape no doubt to suit their own convenience.

The Japanese word for pipe, *kiseru*, is said by many native writers to be of European origin, but there is no word meaning pipe that at all resemble it in any European language. The word *rau* used for 'stem,' is also supposed by Japanese writers to be derived from a foreign word, and the nearest approach to it to be found in another language is *reu* or *o-reu*, which according to the *Enroku* is Annamite for 'pipe.' That Annamites came to Japan and that Japanese visited Annam during the beginning of the 17th century are well ascertained facts. It is not improbable therefore that *rau*, the word now used by Japanese for stem is a corruption of *reu*, pipe, and that pipes formed exclusively of one piece of metal, as the earliest forms seem to have been, were simply called *rau*. In the *Me-zamashigusa* (1815) is figured an iron pipe which is said to have been in the possession of a rich inhabitant of Yamagata in Dewa for a couple of hundred years (see Pl. II), which was no doubt the original form. It was fourteen English inches in length and so solidly made that it weighed the equivalent of seven and a half ounces avoirdupois. The guard which enabled the pipe to be used for striking, or kept the mouthpiece from touching the floor mats when laid down from time to time, is engraved separately, and there seems to have been a small hole on one side, which may have served, it is suggested, for attaching the tobacco pouch. Such a pipe was too heavy for every day use, and we can easily imagine that the idea of constructing the stem of lighter material, retaining the employment of metal only for the bowl and the mouthpiece would readily find acceptance. A slender bamboo tube was selected for this purpose, and the new pipe was called a *Kise-ran,—kise* meaning 'to put on' or 'over.' This word became corrupted into *kiseru* and even *kiseri*. Cuts of the other early Japanese pipes are given in the *Enroku*, and are reproduced in Plate III. The example of which only the two ends are shown bears the inscription "Minakuchi Gombei Yoshihisa," probably the residence and names of the maker; it had a bamboo stem three or four Japanese inches long. According to the owner's story this pipe belonged to Hideyoshi, which is hardly consistent with the tradition of his having prohibited the use of tobacco. From the *Me-zamashigusa* there is another pattern (Pl. IV.), concerning which it is uncertain whether it is of Japanese or foreign origin. Pl. V. No. 1 represents the pipe formerly used in the Corean colony of Nawashiro-gawa near Kagoshima, and Pl. V. No. 2 an Aino pipe carved out of a small branch of a tree (both from the *Enroku*).

Serembou or *Serimbou* is the word used by the Ainos for pipe, which may perhaps be composed of *kiseru* and *bou*, a stick, the initial syllable *ki* having been subsequently dropped under the impression that it meant *ki*, wood, and was therefore superfluous. There would be nothing strange in the Ainos borrowing a term for pipe from the Japanese, since they were always indebted to the latter for their supplies of tobacco, and I have even been informed that the same word *serimbou* is applied to pipes by the Japanese inhabitants of the north of Anshiu. If this be true, it goes to support the conjectured etymology of the word.

The tobacco tray *(tabako-bon)* in common use always contains a fire-pot *(hii-re)* and an ash-pot *(hai-fuki)*, the latter of which may also be used as a spittoon. The tray used by the master of the house frequently has a drawer underneath for his tobacco, while the visitor is usually supposed to carry his own in a tobacco-pouch. There is a large kind of tray used on occasions of ceremony, which may have gone out of fashion of late years, called *shiyo-in*, or drawing-room, *tabako-bon*. It is a solidly constructed piece of furniture of lacquered wood, over a foot in length, about three inches high and broad in proportion. In the centre reposes a neat black lacquered box containing cut tobacco, flanked on the right by a fire-pot, of brass, bronze, or earthenware, and on the left by an ash-pot of corresponding material; in front are laid a pair of very long pipes with bamboo stems and brass bowl and mouthpiece. This apparatus is said to have been derived from the *kaubon* (香盆), or incense-tray, the use of which was to gratify an honoured guest's sense of smell with fragrant odours of burnt gums, rare woods and roots of herbs. The fire-pot is the incense burner or *kauro* (香爐), the ash-pot is the *taki-gara-ire*, or 'receptacle for the products of combustion', the tobacco-box is the cover of the silver-wire net work on which the incense material was consumed over the burning charcoal, and the two pipes have been evolved by gradual steps from the *hibashi* or tongs used for arranging the fire. At Nagasaki the ordinary name for the tobacco-tray at the beginning of this century was *kaubon*, which confirms the theory of its descent from an older group of related utensils. Shimmi Raujin, an author who wrote in the beginning of last century, informs us in the *Yaso Okina mukashi gatari* that fifty years or so before his time tobacco pouches had not yet come much into vogue and that visitors or guests always smoked their host's tobacco, no matter whether good or bad. The etiquette, too, was different. Until the master of the house made his appearance in the reception room, the visitor did not begin to smoke though the tobacco tray and its contents were placed before him. When the host came in, after the usual compliments had been exchanged, he invited his visitor to smoke with the words *tabako maire*. The visitor was expected to decline two or three times, in the same way as a cup of tea or *saké* is refused, entirely as a matter of form, and to press the host to begin. Upon this the host took a sheet or two of paper from the pocket which he carried in his bosom, took a pipe in his hand, removed the guard, carefully wiped the pipe with the paper and offered it to his guest, who then accepted it with the usual mark of gratitude by raising it to his forehead, and began to smoke. If the tobacco was good he praised its qualities, and after a puff or two, wiped the mouthpiece with paper and put the pipe down in front of him. The woodcut Pl. VI. from the *Me-zamashigusa* represents the scene. There is the square tray between the friends, on the matted floor at the left of the entertainer lies the bundle of paper, on which he has deposited the guard, and he is just in the act of handing the pipe. On taking leave the visitor again wiped the pipe, and replaced it in the tray, the host protesting and begging him to leave it as it was. In former times, continues our author, it was considered a grave breach of good-manners to smoke in the presence of an old person, or of a superior officer. If a young man were invited to smoke, it was proper for him to say that he had not acquired the habit. "The most "notorious knaves, "swaggerers, bullies and self-assertors "would not dare to smoke in the presence of their chiefs "*(oyakata)* or elders." The 'guard' was a metal disk with a central hole to fit the pipe-stem, resembling very closely the guard of a Japanese sword. It has been conjectured that the early iron pipes which were carried by the two Clubs at Kiôto, whose riotous conduct was the cause of one prohibitory edict, were used as weapons, in the same way as the *jitsu-te*, or light iron maces of the police of former days, and that they were fitted with guards to protect the hand.

It was some time before respectable women took to the use of tobacco, but as an anonymous author sarcastically remarks, "women who do not smoke and priests who "keep the prescribed rules of abstinence, are equally "rare." The accompanying woodcut represents a lady of the middle of the seventeeth century, followed by a little servant maid carrying her mistress' long pipe, drawn by the well-known artist Tosa Mitsumasu. It is related of

Digitized by Google

the Dutch that when new-comers arrived at Nagasaki, they were much surprised to see the Japanese women who came into Deshima to entertain them smoking like men, for that in their own country the women never indulged in the practice, and moreover that men never venture to smoke in the presence of the other sex. Either these were very early Dutchmen, or there must have been a mistake in the interpretation as regards the second assertion.

The most usual combination of Chinese characters used by the Japanese for writing the *tabako* is *ensau* (煙草), smoke-weed, with which they first became acquainted through a Chinese medical work entitled Peûts'ao Tungts'üen (本草洞詮) by Ch'ăn Muh (沉穆) written during the reign of the sovereign whose style was Shunche (順治, 1644-1662). Previously they had employed mere transliterations of the three syllables *ta-ba-ko* furnished by Chinese characters, or such elegant synonyms as 'life-lengthening plant (延命草)' and 'long life plant (長命草), invented by the tobacconists to recommend their goods. One of the transliterations adopted, namely 丹波粉, powder of Tamba, gave rise to a tradition that the leaf first made its appearance in the province of Tamba. Another name, given to it doubtless by its enemies, was *bimbausau* (貧報草) 'poverty-plant' because it was feared that the too extensive cultivation of tobacco would diminish the national wealth, and in Riutei Tanehiko's tale of the 'Six-folding Screen,' it is referred to as the *ahau-gusa* or 'fool's herb,' evidently the suggestion of a malicious abstainer.

The Chinese invented a very large number of titles for the tobacco-plant. Expressions such as 'smoke-fire' (煙火), 'smoke-blossom' (煙花), 'smoke-leaf' (煙葉), 'fragrance' (芬) are of obvious meaning. Others are more elegant such as 'gold-thread herb' (金絲草), from the resemblance of the finely cut leaf to the threads of gilt paper used in the woof of brocade. 'Soul-recalling smoke' (返魂煙) is derived from the wonderful power which a single puff has of reviving the energies of the melancholy wearied and drowsy. It is also called the 'herb of love' (相思草) because those who are addicted to the use of tobacco long for it day and night without ceasing. The epithet 'carried not back' (擔不歸) is applied because hawkers of this narcotic, drive so brisk a trade that they usually get rid of their stock before the day is ended, and so have nothing to carry home but the proceeds. The 'herb of aimiability' (愛敬草) is a name which it has got on account of the affectionate feelings entertained towards each other by all classes of mankind since its use became general, and from its well-known virtue of soothing the intellect while engaged in the unloosing of some mighty social problem are derived the epithets 'herb of reflection' (思案草) and 'herb of discernment' (分別草). Other names are applied by lovers of the weed out of pure enthusiasm, such as 'joy and happiness' (慶喜), 'constant pleasure' (常樂), 'friend of leisure' (閑方) and 'nourisher of the spirit (養氣).

Concerning the discovery of the plant Japanese writers recount various legends of Chinese origin. According to one of these "it is the custom in some unknown land inhabited by demons to carry out dying persons into the depths of the forests and there leave them to their fate, and on one occasion it was the daughter of the King of that country who was thus abandoned to a lonely death. Not long afterwards, a man who happened to pass the spot, perceived a most delicious odour, and upon searching for the cause, he found a plant which, being brought near to his nostrils, suffused his whole being with a sensation of purity and freshness. Jumping up in delight, he ran off to the palace and told the marvellous tale. In this way tobacco was discovered." A variation of this story makes the discoverer to be the princess herself, who was revived by the odour of the wonderful plant.

Another legend says that 'there was a Nañbañ woman named Tanbako, who was cured of a cough that had troubled her for many years, by a dose of this plant. It was natural that her name should be given to the remedy." This is a very good example of the way in which myths may originate from attempts at etymology. *Tan* in Chinese may mean 'phlegm' and '*paku*' may be written with two Chinese characters 婆姑 which are both formed by adding the phonetics *pa* and *ku* to the radical 女 'woman.' Hence arose an explanation that some woman must have have been so troubled with phlegm, that she was nicknamed after it, and that her appellation was transferred to the herb from which she had obtained relief. There is also a story of 'a land called Abirika situated somewhere to the east of Japan, where dwelt a beautiful damsel named Tañbako, the object of adoration to an immense number of the youths of that country, whose devotion to her survived her death. It fell out that a certain youth having gone to worship at her tomb, was overtaken by the swift approach of autumn twilight, and was obliged to pass the night there. In the middle of the night a fit of hunger seized him, and on stretching out his hand, behold there was a fragrant herb, a single leaf of which satisfied his craving for food, while a sensation of gentle warmth pervaded his body, and protected him from the ill effects of the morning breeze. This is also a mere variation of the first legend above given.

The *Ensauki* gives the following list of the merits and demerits of tobacco.

1.—It dispels the vapours and increases the energies.

2.—It is good to produce at the beginning of a feast.

3.—It is a companion in solitude.

4.—It affords an excuse for resting now and then from work as if in order to take breath.

5.—It is a storehouse of reflection, and gives time for the fumes of wrath to disperse. But on the other hand:

1.—There is a natural tendency to hit people over the head with one's pipe in a fit of anger.

2.—The pipe comes sometimes to be used for arranging the burning charcoal in the brasier.

3.—An inveterate smoker has been known to walk about among the dishes at a feast with his pipes in his mouth.

4.—People knock the ashes out of their pipes while still alight, and forget to extinguish the fire.

5.—Hence clothing and mats are frequently scorched by burning tobacco ash.

6.—Smokers spit indiscriminately in the brasiers, foot-warmers or kitchen fire places.

7.—Also in the crevices between the thick mats *(tatami)* which cover the floor.

8—They rap the pipe violently on the edge of the fire-pot.

9.—They forget to have the ash pot emptied until it is full to overflowing, and lastly, they sometimes put the ash-pot to the use of a nose-paper.

As remedies for the disagreeable effects of excessive smoking, hot water and sugar—liquorice—soup prepared from the paste of fermented beans and barley called *miso*—hot water and salt—and cold water are mentioned. The author of the *Ensauki* recommends from his own experience an infusion of equal parts of *bakumondou* (Ophiopogon japonica), *shiso* weeds (Perilla arguta), *kuwarou nin* (seeds of Tricosanthes japonica), leaves of the loquat (Mespilus joponica) and liquorice (glycyrrhiza glabra), to be strained, and drunk with an ounce of sugar. He omits to give the quantities of the other ingredients.

"Clothes which have been polluted by tobacco-oil can be cleansed with chewed melon-seeds."

"Foreign surgeons are said to mix a decoction of young tobacco leaves with green ointment, and to apply the preparation externally as an anodyne, also to hasten suppuration, stop bleeding and as a vermifuge."

"The decoction of tobacco stalks is useful for destroying the insects which devour the leaves of *aii* (polygonum tinctorium) and other plants. Peasants place bundles of the dried stems in the space between the walls of their cottages and the eaves, to keep out rats and mice. The dried leaves placed in books defend them against their enemies the worms. Paper steeped in a decoction of tobacco may be used as oakum. Small quantities of inspissated tobacco oil, in lumps of the size of a poppy seed, may be applied with advantage from time to time to the eyes in case of amaurosis, and generally have an instantaneous and beneficial effect in cases of dimness of sight and blear-eye."

The medical profession in Japan appear on the whole to have been in favour of smoking in moderation. About the end of the seventeeth century there was much lively

SUPPLEMENT
TO THE
Japan Weekly Mail.

YOKOHAMA, SATURDAY, 17TH NOVEMBER, 1877.

ARRIVAL OF THE AMERICAN MAIL.

London, October 23.—A correspondent at Sistova telegraphs as follows: The Russians have made contracts for the construction of a series of railways in Bulgaria, and the work will commence October 27th. The main line will run from Sistova to Gorny-Studen, with branches from there to Plevna and Tirnova. The passage of the Danube will be by ferry boats, on the American plan, carrying several railway carriages each.

London, October 22.—A Russian official dispatch, detailing Friday's attack upon the second Gravitza redoubt, says: At the first attack the Roumanians were repulsed before they could gain the redoubt. At the second attack three of the foremost battalions leaped into the trenches, and vainly endeavored to carry the redoubt. They remained one hour in the trenches, which gave rise to a premature report of the capture of the redoubt. The Roumanians then withdrew, with the loss of two officers, two hundred men killed, and twenty officers and seven hundred and seven men wounded.

London, October 23.—A correspondent in Plevna telegraphs as follows: The Turks are actively constructing new anterior lines and formidable defences. Cases of sickness are comparatively rare. Provisions have never failed, but it is impossible to provide fodder for thousands of oxen and horses.

A correspondent telegraphs from Sofia, under date of Sunday: Six thousand provision carts are now on the road to Plevna. Osman Pasha has ordered all Circassian irregulars, Bulgarians and non-combatant Mohammedans to quit Plevna.

A special dated Shumla, Monday, says: The Russians attacked the Turkish positions at Solerrick to-day; result unknown.

A dispatch from Constantinople states that the order appointing Achmet Eyaub to the command of Erzeroum has been countermanded.

London, October 22.—A Constantinople dispatch says: Russians from Medjidie are making daring reconnoisances as far as Basajik and Silistria.

Sulieman Pasha is about to send Colonel Valentine Baker and other English officers back to Constantinople.

A Berlin correspondent telegraphs that the Berlin bankers, Henckel & Sange, with a capital of seven million marks, have been forced into liquidation in consequence of the failure of the Ritterschaftliche bank. Creditors hope to receive in full after some delay.

A Bucharest dispatch says: A General, formerly in the American army, and correspondent of the New York *Times*, has been expelled from Roumania by the Russian authorities, because he served in the Turkish army during the Crimean war. This measure appears ill advised and severe.

London, October 22d.—Eighteen thousand men, and fifty cannon were captured by the Russians in their recent victory over Mukhtar Pasha.

Turkish reports that a part of their army was holding out in a fortified position on Aladja Dagh are unfounded.

The Russian loss in carrying Aladja Dagh is officially reported at 1,441 killed and wounded. The losses on the other parts of the battle field are not stated.

London, October 22.—An explosion has occurred in a colliery at High Blantyre, near Glasgow. Four hundred men were in the mine and a large number are killed.

Glasgow, October 22—2 p.m.—The special train sent to bring the injured by the colliery explosion to the Glasgow Infirmary, has returned. No one has been got out alive. Twenty dead bodies have been recovered. It is feared the entire four hundred, in the colliery when the explosion occurred, perished.

New York, October 22.—A Glasgow dispatch says: Intense excitement prevails over the colliery explosion. Exploring parties are endeavoring to get at the miners, but have little hope of rescuing any. The bottom of the pit is said to be full of dead bodies.

New York, October 22nd.—A *Herald's* Fort Walsh special, dated Northwest Territory, October 18th, viâ Helena, Montana October 21st, says: The United States Commission sent out by the Government to find and treat for peace and good will with the Sioux chief, Sitting Bull, has at length succeeded in coming face to face with the redoubtable chieftain, and have failed to bring him to any terms. In short the Commission has met Sitting Bull, and Sitting Bull has dismissed it abruptly and disdainfully. The expedition has failed in its purpose, and the Sioux question is as far from a satisfactory solution as when Terry and his brother Commissioners first set out on their long and tedious journey to the northwest.

Glasgow, October 22.—The latest particulars from High Blantyre show that 233 miners descended into the mines this morning. None of these, except one who was working near the shaft at the time of the explosion, had been rescued up to a late hour this evening. Very little hope of rescuing the men is entertained, as the explosion occurred at nine o'clock this morning, and the exploring party had to relinquish their efforts in one pit at four in the afternoon, because of poisonous gases at the bottom of the shaft of the other pit, the colliery comprising two pits, with a communication between them. A faint knocking has been heard, but so far it has been impossible to reach the bottom of the shaft.

Explorers have resumed operations at the first pit. They report forty corpses lying at the foot of the shaft.

The shaft at the bottom of which the knocking was heard is rapidly collapsing. The explorers are consequently attempting to reopen communication from the other mine. They have penetrated about half a mile, but have still 150 fathoms to clear, so they cannot possibly reach the men who are supposed to be imprisoned before morning. It is feared that by that time few, if any, will remain alive.

[Blantyre is within ten miles of Glasgow, and was the birthplace of Dr. Livingstone, the explorer. The coalpits there are very deep. Should the fears that all the men in the colliery have perished be realized, this accident will prove the most disastrous that has taken place in connection with the working of the coal measures in Great Britain. The only calamity of the kind that will come near to it, will be that which took place at Oaks Colliery, Hoylemell, near Barnsley, Yorkshire, where, on December 12, 1866, 360 men, and on the next days 13 searchers, were killed].

London, October 22.—The race for the Criterion Stakes at Newmarket was won by Jeanette; Clementina second Lord Olive third.

London, October 22.—Advices from Cape Town, October 2nd, by way of Madeira, state that war has commenced in Transkei between the Galekas and the British and their native allies. Fighting occurred September 23th and 29th, at South Mapassa and Ioeka. Galekas to the number of 8,000 attacked the British, but were repulsed with loss of 200 on September 24th. Their loss on September 29th is unknown. The British loss was one man killed and six wounded. Reinforce-

ments have been dispatched from Simon's Bay and volunteers are being enrolled throughout the colony.

London, October 23.—A Paris correspondent says the article published in the *Courrier de France* suggesting the immediate formation of a Cabinet of conciliation, has attracted much attention. It is supposed to have been inspired by Jules Grevy and other Republican leaders.

Athens, October 22.—The sessions of the Greek Chamber reopened to-day.

Constantinople, October 21.—In consequence of Mukhtar Pasha's disaster, all the troops in Constantinople are being sent hastily to Trebizond. Achmet Eyaub Pasha will go immediately to take command at Erzeroum.

Karajol, October 17.—General Heymann is advancing on Erzeroum. Kars is surrounded, and negotiations for its surrender have been opened. Russian headquarters are now at Virzinkoi. Gen. Lazaroff is marching against Ismail Pasha.

London, October 21.—A Russian official dispatch from Gorny-Studen reports that in one of their assaults, on Friday, the Roumanians entered the second Gravitza redoubt before Plevna, but during the evening the redoubt was recaptured by the Turks.

A telegram dated Poredin, Saturday, said: The Roumanians captured the redoubt on Friday after three vigorous assaults, but during the night the Turks, collecting all their forces, recaptured it after a most sanguinary contest. It was expected that fighting would be continued on Saturday.

Bucharest, October 21.— A Russian official account gives the Roumanian loss on Friday at five officers and one hundred and thirty-eight men.

London, October 11th.—The Bolton strike is augmented by the miners and piercers at the Mannocks Mills.

General Grant to-day visits Commodore Ashbury at Brighton. He returns on Tuesday, and, it is expected, will go to Paris on Wednesday.

The Shah of Persia intends visiting London and Paris next spring.

St. Petersburg, October 26th.—The foot and horse artillery of the reserve will be placed on a war footing.

Rome, October 29th.—Although the Pope likes to receive visitors, and is chatty with them, he seems to have ceased to take interest in the affairs of the Church, and almost invariably dismisses any one who comes to talk to him on business. The affairs of the Papacy are without any supreme pontificial guidance, being conducted simply by the heads of the various State Departments and by the Presidents of the various congregations. Jealousy reigns among these bodies, and as each does as it suits its chief, the Papal Government is threatened with division and anarchy.

Bucharest, October 21.—A late telegram from Rasgrad says a detachment of the army has arrived at that place, but the positions at Sonik and Kadekal are retained for the present by the Turks. It seems evident, however, that a retrograde movement has commenced. Sulieman Pasha has gone to make personal inspection of the fortifications of Rustchuk.

Bucharest, October 21.—A special from Torlak, dated Saturday, says: The Turks have evacuated Kadekoi for fear the Russians would block their communications with Rustchuk, and have retired to Rasgrad. Russian cavalry, from Dobrudscha, have advanced as far as Kavarra.

London, October 20.—The Russians have before Kars 70,000 men. Mukhtar Pasha's army, at the time of the last battle, did not comprise more than 40,000 men. Among these were fourteen battalions drawn from the garrison of Kars. The Ottoman field army lost at least one-third of its strength, in killed, wounded and captured. A few battalions remain available to retire upon Erzeroum and unite with the troops of Kurd, Ismail Pasha, and those from Pervnek, to form the nucleus of a new army for the relief of Kars. Grand Duke Michael can safely leave 40,000 men in front of Kars, and with the remainder press forward toward Erzeroum.

Agram, October 19,—The Hungarian Government has ordered the stoppage of money relief hitherto granted to able-bodied Bosnian fugitives. The greatest distress and mortality prevail among them.

Vienna, October 19.—It is announced from Varna that Prince Hassan threatens to withdraw the Egyptians, in consequence of their ignominious relegation to garrison duty.

It is calculated that within the last five or six weeks the Russians in Asia have received about 40,000 fresh troops. The Turkish force opposed to them on Monday was estimated at about 30,000 men, which is probably correct.

London, October 20.—The Russian promptness in besieging Kars indicates Russia's hope of achieving such further early success in Asia Minor as must vastly improve Russia's position in any negotiations for peace during the coming Winter. The key to Armenia is again apparently within the grasp of the Czar's forces, who, a few months ago, after their victory at Kurukdere, near the field recently won, were turned back from their triumphant march to Erzeroum only by the Circassian insurrection within their rear. That danger being no longer present, the Armenian campaign now bids fair to finally result in a complete overthrow of the Turks, and give their foe a hold upon the territory from which diplomacy will not easily dislodge him.

St. John, N. B., October 20th.—A fire started in Main street, Portland, a populous suburb of St. John, this morning, and in a short time a number of dwellings and stores were consumed. St. John was called upon for assistance which was promptly given. At five o'clock the burnt district extended from Arcadia, and thence to Main street. Both sides of Chapel street are in ruins.

St. John, New Brunswick, October 20th.—The fire in Portland burned itself out about 9 o'clock. Nearly seventy-five houses were destroyed. One man was burned to death, and several men and women injured. Drunkenness and rowdyism were rampant during the progress of the flames. The Town Council is taking measures to relieve the sufferers. The fire is supposed to have been the work of an incendiary—a previous attempt having been made to burn the building in which the flames were first discovered. The loss is estimated at $200,000. Many of the homeless were sufferers by the St. John fire.

Bucharest, October 21.—A report is current that the Roumanians recaptured the second Grivitza redoubt on Saturday, but this is not (Sunday evening) confirmed. A member of the Red Cross Society says that orders have been received to prepare for the reception of 6,000 wounded. This evidently is a gross exaggeration. There are probably about eight of nine hundred. It is said that the Turks had mined the redoubt, and waiting until it was full of Roumanians, exploded it, and then made the assault. It is thought fighting is still going on.

Constantinople, October 21th.—Sulieman Pasha telegraphs that the Russians have incorporated 18,000 Bulagarians with their army, and that he expectsto be attacked. He has entrenched himself so as to cover Rustchuk.

Tiflis, October 19.—A column has been sent southward to hold the road from Kars to Erzeroum. Large reinforcements left last night to join Mukhtar Pasha. It is also started from Batoum.

Bucharest, October 19.—The Roumanians have approached within twenty metres of the second Grivitza redoubt, which, however, is believed to have

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

been evacuated by the Turks during the last five days.

The Russians before Plevna have received reinforcements of 10,000 infantry.

Ragusa, October 19.—Some Bosnian insurgents have proclaimed a Provisional Government, with Yonin, a brother of the Russian Consul at Cettinje, as President.

Poredin, October 10.—The Czar, in addressing his general staff on Wednesday, declared that he and all the members of the Imperial family would remain with the army to share in the labours and fortunes of the war, and witness the deeds of the soldiers. He concluded: I myself will care for the wants of the army, and if necessary all Russia will, as once before, take up arms."

Chicago, October 19th.—The *Times'* London correspondent at Bucharest thinks Osman Pasha is near the point of surrender, owing to want of food and medicine, and that he will be forced to capitulate without a Russian assault. All reports from Turkish deserters show that Osman is reduced to great straits, but no great reliance can be placed on their statements.

A correspondent at Pera says: Osman has supplies for sixty days, and every confidence is felt in his ability to hold his position. Osman is unable to move, and the responsibility now rests on Sulieman. Reports from Shumla assert that his advance has felt the Russians, and will give battle without delay. Heavy fighting is expected from him, but no success, as the Russians occupy a position nearly as strong as that of the Turks at Plevna.

St. Petersburg, October 19th.—On receiving information of Moukhtar Pasha's defeat, Ismail Pasha withdrew from the neighbourhood of Igdyr to the Heights of Bzar, near the frontier. It is believed he is on the point of completely evacuating territory.

Chicago, October 19th.—A London paper declares concerning Osman Pasha that he is neither Bazaine nor Crawford, but the following is his undoubted history: He is a native of Armenia, Asia Minor, born in 1832 and educated in the military school at Constantinople. He has never been in Europe except European Turkey, but speaks a little French. He is tall, spare, somewhat delicate in health, active, intelligent and attentive to his duties. He inquires personally into every detail of his army and its tactics, directing the mode in which they are to be executed. He possesses urbane and agreeable manners and is a favourite with friends and intimate acquaintances.

Tiflis, October 19.—The Russians moved on Kars yesterday. Siege material has left Alexandrople for Kars. Ismail Pasha's army has retired into Turkish territory, followed by General Tergukassoff. The Russian garrison of Ardahan and the Rion Corps have been ordered to coöperate in the general advance.

Erzeroum, October 19.—Kars is said to be already partially blockaded. There are rumors that the Russians have occupied Peneck.

London, Friday October 19.—A dispatch from Tiflis says: It is estimated that the Russians captured in the battle on Monday last thirty-two battalions of Turks, four brigades of artillery, one hundred officers, and two thousand horses. Among the killed are a son of the Circassian Chieftain Schaury, and a Turkish General of Cavalry, Louissa Pasha. The Russians estimate the total Turkish loss at 16,000 men, together with great stores of munitions and provisions.

London, October 18.—A correspondent at Vienna telegraphs, under date of Thursday night: It is rumored that the assault upon Plevna was recommenced to-night.

London, October 18.—A dispatch from Biela reports that the Czarowitch has removed his headquarters from Dolma Monastyr to Boistovo, which is further north, between Lom and Jalta.

London, October 18.—A special from Sistova says: The Russian contractor has informed Grand Duke Nicholas that the material ordered in England for the construction of iron huts for the troops has been confiscated by British Government as contraband of war.

London, October 18th.—A Paris correspondent telegraphs as follows: On the part of the Left there is a determination and self-restraint more than ever. The idea of invalidating elections by wholesale has been given up, and only elections palpably vitiated will be annulled, particularly those of the main authors of the act of May 16th; but it is even doubtful if this will be attempted. I learn that the Commission which was discussing the Spanish tariff has been warned that it ought to finish its labours before November 5th, which indicates a possible retirement of the Cabinet. I know that the Duke de Broglie has expressed himself clearly on this point, and he is the very Minister whose resignation would be called for in case of resistance. But alarming rumors are also current. All who approach official spheres say that they are mad; that they have lost their heads; that they are dreaming of a state of siege; of fresh dissolution; of dictatorship; of a plebiscite; of more energetically managed elections, and of the so-called safety of the country at any price. The correspondent summarizes the views current at the Elysée, which he derived from a conversation with a person intimate there. According to this information the elections are not regarded as necessitating a retirement of the Cabinet. The Marshal will wait to see what will be the attitude of the Chamber. If it shows an aggressive temper, a disposition to thwart the Cabinet, or force on the Marshal a dishonorable policy, consisting of an abandonment of his functions, and a violation of his solemnly contracted pledges, he will dissolve it again, and in the unlikely event of the Senate refusing its assent to dissolution, the Marshal will, if necessary, persist in dissolving the Deputies, being guided only by public interests. He considers that the elections show that France demands a Republic coupled with order, and believes that he alone can give her both in conjunction. He thinks also that in the elections of Sunday last the country did not fully appreciate the interest at stake.

London, October 20th.—A Simnitza dispatch says; Rain is falling heavily with every appearance of long continuance. The roads are all but impassable. There was never anything like it.

At Baladava forty Turkish soldiers deserted from Osman Pasha's camp to-day, and declare that there was so little food in Plevna that the men only got a pound of bread in 24 hours. There were 130,000 men in Plevna who could only be made to surrender by hunger.

London. October 20th.—The *Times* says: As the German Government refuses to sell silver at the existing rates, supplies are very small, Notwithstanding the limited amount offering there has been moderate a business doing and the market appears firm. The last quotation was 55d.

London, October 18th.—The steamer *Fitzmaurice*, has recovered the Cleopatra caisson, ninety miles north of Ferral, Spain.

London, October 18th.—A Vienna dispatch says Mukhtar Pasha's defeat makes further operations of Ismael Pasha against Igdyr out of the question, and if he does not retreat promptly he may share the fate of Mukhtar's army. The division of the Russian force at Ardahan will not remain idle longer. The

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Russian march on Erzeroum may be tried again this year.

London, October 18th.—A correspondent who has just inspected the Russian route of communication from Giurgevo to Simnitza, telegraphs from Simnitza that the road for the whole distance is almost impassable. The mud varies from two to four feet in depth, and wagons with arms, munitions and provisions are hopelessly stuck.

Paris, October 17.—Further denial is given to the statement that the Ministers intend to resign. It is stated that the Ministers have not for a single moment entertained the idea of resigning, any more than the President has thought of separating himself from them. Minister Fourtou, in receiving the Prefects to-day explained to them in the name of the Government that the electoral struggle which had gained fifty seats for the Conservatives would continue on October 28th, at the second ballotings, and on November 4th, at the elections for Councils-General, under precisely the same conditions as it was entered upon. It seems certain that Gambetta is strenuously endeavoring to unite all factions of the Left into a single group.

London, October 17.—General Grant was present at a banquet in Birmingham this evening. The Mayor presided. Mr. John Bright sent a letter regretting his absence, but expressing his confidence that General Grant would meet a reception which would show him how much Birmingham was in sympathy with him and his country. After the health of the Queen was drank, the Mayor proposed that of the president of the United States as a potentate whom all should honor. This was received with due honor by the company. Chamberlain, M. P. for Birmingham, then proposed the health of the ex-President in a happy speech. General Grant, in response, referring to the last speaker's allusion to the prompt disbandment of the army after the civil war, said: "We Americans claim so much personal independence and general intelligence that I do not believe it possible for one man to assume any more authority than the constitution and laws give him." As to the remarks which would accrue to America by the establishment of free trade, the General said she had a profective tariff until her manufactures were established. American manufactures were rapidly progressing, and America was thus becoming a great free trade nation. [Laughter.] The General then warmly thanked the company for the reception given him.

London, October 17.—A Paris correspondent telegraphs as follows: The Left have proclaimed that they will annul elections obtained by permitting candidates to post on walls addresses printed on white paper, which, according to law, should be only used for placards emanating directly from the Government. All the Governmental candidates used white paper for their placards. The Left hereby intend to lay down a principle binding on themselves as well as on their opponents, and to inflict a solemn condemnation on official candidacy, backed by unblushing coercion. They also announce that if the Cabinet is not formed from the majority, they will pass at the very first sitting a vote of want of confidence, and after insuring the payment of the interest on the National debt and supplies for the army, public works, and purely administrative purposes, they will refuse all votes necessary for working of the Cabinet, such as secret service money and salaries of functionaries: do everything in short which can oblige a Cabinet acting within the law to abandon the struggle. The conditions on which the members of the Left who might be summoned would agree to form a Cabinet are also spoken of; but it is too soon, for nobody is at present in a position to formulate them authoritatively. The great question is, What will the present Ministry, and above all Marshal MacManon, do? Rumors relative to his intentions vary continually. The latest are to the effect that the Ministers are inclined to resign, but it is added that the Marshal's private advisers hold that the Marshal cannot yield to the dictates of the Democracy without breaking his repeated pledges, but that he will accept the Left Centre if it severs itself from the rest of the Left; that he cannot advance toward the Left Centre while it retains its present alliance, as such step would lead him finally to accept a radical Ministry. It is not surprising, considering the dangerous counsels offered to the Marshal, that vague rumors of a coup d'etat have been in circulation for two days. Business has slackened, and the situation, instead of improving, seems to be becoming more gloomy and disquieting. There are evidently men who have an interest in driving the Marshal to extreme measures. The correspondent says, in conclusion, that he believes the Marshal, however, incapable of prolonging the agitation, which, if much protracted, would be fatal. The bulk of the nation desires settlement by an understanding with the Marshal.

Constantinople, October 17.—Suleiman Pasha on Tuesday made a reconnoissance in person as far as Tirsterik. A battle with the Czarewitch is momentarily expected.

Snow in Shipka Pass is one metre deep, and operations there are impossible.

London, October 17.—An official dispatch from Mukhtar Pasha, dated Kars Monday, 15th. says:

"Our centre, after being exposed for over four hours to an overwhelming cannonade and incessant assaults was compelled to retreat, leaving Dulias Hill in the hands of the enemy. The Russians then occupied all stragetical points in the direction of Kars, to which place we withdrew with one division, to prepare our revenge. Another division, including the corps commanded by Rachid Omar, Kiazin, Moussa and Chevket Pasha, continues to hold its positions on Kara Dagh."

Mukhtar Pasha says his loss is only 800 hors de combat, which is obviously untrue. He claims that a regiment and a half of Russian cavalry, and four battalions of infantry were totally destroyed. Mukhtar attributes his defeat to Russian reinforcements and the fact that they were able to place in position 200 guns, served by skilled artillerists.

Bucharest, October 17.—The bombardment of Plevna has been recommenced along the whole line, and a decisive action is imminent. Russian advices report large numbers of Turks deserting from Plevna.

It is stated that Osman Pasha's communications with Sofia have been cut. Suileman Pasha is concentrating all his forces Kadikoi.

London, October 17.—A Vienna correspondent says that Greece demands that the Greek flag shall be formally saluted on the citadel at Larisda, as reparation for the recent attack on the Greek Consulate. The Porte objects to this, because of the excitement which such a salute would cause among the Turkish population. In spite of this, no apprehension is entertained of an immediate collision, which as in Servia's case, depends on events at the seat of war.

London, October 17th.—A special from Paris says: The French Government seems decided on using formidable administration machinery to influence the election of 15,000 Conseillors D'Arondissement, and Conseillors-Generaux on the 4th of November, three days before the meeting of the Chamber. These elections are of importance, Conseillors-Generaux, and Conseillors-D'Arondissement, and Delegates of Principalities, being electors of the Senate. The third of the Senate retires early in 1879.

Original from UNIVERSITY OF CALIFORNIA

discussion of the merits of tobacco. Kaibara opposes its use altogether, as appears from the following extract from his work above-quoted :—"Of articles of food and drink the three potables* *saké*, tea and tobacco are the most appreciated by all degrees of social rank and intelligence. Medical writers tell us that though *saké* has some evil qualties, it is very wholesome when taken in small quantities, nor did the sages of antiquity reject it altogether. Tea has the power of quenching our thirst and driving away troubles. Tobacco alone produces no benefit, but on the contrary does more harm than anything else. It is not worth while to chide the common people for sucking it in, but for gentlemen and 'superior men' to follow after a custom imported from a barbarous country, and to take pleasure in and praise that which harms the body are woeful errors. In the year 1615 the Shiyaugun published a decree throughout the empire by which the sucking-in of tobacco was forbidden, a most wise law indeed, but it has been left to the present day to lament over the relaxation of this prohibition."

The subject of tobacco in Japan is by no means exhausted in the few notes which I have here put together. The methods of cultivation and preparation for the market, the manufacture of the dried leaf for use, the machinery used in cutting it, the manufacture of pipes, pouches and tobacco-trays, the statistics of production, domestic consumption and foreign export, the different brands esteemed by smokers, are all subjects worthy of notice, but they are foreign to the task which I had set myself, namely to determine the date of the introduction of tobacco into this country, the limits of which question I have already exceeded. I will only touch upon one other point, namely the signboard now in vogue. The paper screens which close the front of a tobacconists shop are usually adorned with a coloured drawing of a tobacco leaf, and the two Chinese characters 國府 which literally mean "country capital." This sign is to be seen in every part of Japan, and was a mystery to me for some years, until I discovered that the proper way to read the characters was *Kokubu*, and that they form the name of the town in Ohosumi, on the gulf of Kagoshima, which is celebrated for the fine qualities of the tobacco grown in the neighbourhood. Here was the administrative capital of the province of Ohosumi at some remote period before the times of the Shiyaugun, and from being general *Kokubu* has come to be an individual name by a process sufficiently common in the topographical history of all countries. It must not be supposed from the universality of the sign board that *Kokubu* is able to supply the whole of Japan with its produce, and in fact it might in nearly every case be simply translated "Tobacco sold here." I add a list of native works consulted in collecting materials of this paper.

* In Japanese one is said to 'drink' tobacco; *tabako wo nomu*.

The steamer *Fleurs Castle*, which arrived Monday from London, reports two mishaps during the passage. In the Suez Canal she broke her propeller and had to discharge about three hundred tons of cargo, and, in consequence, she was in the Canal six days. In the China Sea she experienced a strong monsoon and confused sea; and, shipping a large sea, her aft wheel and steering gear were carried away.—*S. C. & C. Gazette.*

Revenue and Expenditure.—The receipts on account of revenue from the 1st April, 1877, when there was a balance of £5,988,650, to Sept. 22 were £34,491,434, against £33,727,006 in the corresponding period of the preceding financial year, which began with a balance of £5,119.587. The net expenditure was £36,010,090, against £35,174,510 to the same date in the previous year. The Treasury balance on the 22nd inst. amounted to £3,334,995, and at same date in 1876 to £2,819,375.—*L. & C. Express.*

AN ANALYSIS OF CERTAIN ARTICLES OF JAPANESE FOOD.

Sikakujio, Osaka, 30th July, 1877.

To E. SATOW Esq.,
Corresponding Secretary of the Asiatic Society.

Amongst the articles which the Siyakujio of Osaka has sent to the Exhibition of Tôkiô, there are several kinds of food, together with a report of their analysis. The time for analysing them being very limited (three weeks only) the analyses have been necessarily incomplete.

Four kinds of Red Beans, called *Adzuki*, No. 1, 2, 3 and 4 were successively examined, these being the seeds of *Phasæolus radiatus, Linn.* var. *subtrilobata*. These Beans form one of the principal articles of food of the Japanese, and are also especially used by those who suffer from *biri-biri*, they being supposed to act as a diuretic. But excepting a certain red-coloured matter, I have not yet found anything in these Beans which is not always to be met with in seeds of the genus *Phasæolus*; the examination, however, is still going on. No. 5 a variety of hulled rice, called *Mochi-gomé;* No. 6 common hulled rice *(Komé);* No. 7 Rye and No. 8 Wheat, all of native growth and all of last year's production.

ANALYSES.

No. 1.—Red Beans (*Adzuki*), large kind.

Specific gravity	1.276	
Water	14.58	per cent.
Ashes	2.76	„
Fat	0.35	„
Nitrogen	2.86	„ corresponding with about 17.9 per cent. of albumen.

No. 2.—Red Beans (*Adzuki*), small kind.

Specific gravity	1.300	
Water	13.29	per cent.
Ashes	2.95	„
Fat	0.30	„
Nitrogen	2.96	„ corresponding with about 18.5 per cent. of albumen.

No. 3.—Red Beans (*Adzuki*), large kind.

Specific gravity	1.284	
Water	16.08	per cent.
Ashes	2.77	„
Fat	0.34	„
Nitrogen	2.84	„ corresponding with about 17.7 per cent. of albumen.

No. 4.—Red Beans (*Adzuki*), small kind.

Specific gravity	1.289	
Water	13.01	per cent.
Ashes	3.03	„
Fat	0.32	„
Nitrogen	2.95	„ corresponding with about 18.4 per cent. of albumen.

No. 5.—Rice (*Mochi-gomé*).

Specific gravity	1.394	
Water	14.00	per cent.
Ashes	1.14	„
Fat	2.36	„
Nitrogen	0.972	„ corresponding with about 6.07 per cent. of albumen.

No. 6.—Common Rice (*Komé.*)

Specific gravity	1.370	
Water	11.18	per cent.
Ashes	1.22	„
Fat	1.43	„
Nitrogen	0.981	„ corresponding with about 6.13 per cent. of albumen.

No. 7.—Rye (*Hadaka-mugi.*)

Specific gravity	1.384	
Water	13.49	per cent.
Ashes	2.02	„
Fat	0.97	„
Nitrogen	1.49	„ corresponding with about 9.3 per cent. of albumen.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

No. 8.—Wheat (*Mugi*).

Specific gravity	1.269	
Water	12.38	per cent.
Ashes	1.93	„
Fat	1.56	„
Nitrogen	1.50	„ corresponding with about 9.4 per cent. of albumen.

To determine the amount of fat, I used a liquid, which I have always found admirably suited for this purpose when analyzing seeds, viz., *Petroleum ether* (so called by the Dutch). This ether may be easily obtained through fractional distillation of naphtha, which owing to the opening of petroleum wells, has recently become an article of trade; the Japanese know it under the name of *Seki-nô-yu* or *Ko sei-yu* or *Ki-hats'-yu*. As far as I know, this naphtha is principally used in the lanterns, which now, during the summer evenings, serve as imitations of gas light. I fancy that owing to its highly inflammable nature, it must be a dangerous plaything for those who use it. The naphtha gives about one-third of ether at a very moderate cost, while the residue can be used as kerosene oil.

I am, dear Sir, most truly yours,

B. W. DWARS.

Siyakujio, Osaka, 18th October, 1877.

To E. SATOW ESQ.,

The Corresponding Secretary of the Asiatic Society

DEAR SIR,—Last August I sent you some notes about analyses of Japanese Food, since then I have examined the two kinds of rice and two of red beans more minutely, and now beg to lay before the Asiatic Society the result of my experiments as a supplement to the first notes on these two important articles of food.

It is as follows:

No. 3.—Red Beans, called *Adzuki* (large kind).

Specific gravity 1.284.

Water	16.08	per cent.
Ashes	2.77	„
Fat	0.34	„
Nitrogen 2.84 per cent. corresponding with about: Albumen	17.75	„
Sugar and Gum	10.60	„
Starch	37.50	„
Cellulose, colouring matter, etc.	14.96	„
	100.00	

No. 4.—Red Beans, called *Adzuki* (small kind).

Specific gravity 1.289.

Water	13.01	per cent.
Ashes	3.03	„
Fat	0.32	„
Nitrogen 2.95 per cent. corresponding with about: Albumen	18.44	„
Sugar and Gum	12.30	„
Starch	34.50	„
Cellulose, colouring matter, etc.	18.40	„
	100.00	

No. 5.—Rice, called *Mochi-gomé*.

Specific gravity 1.394.

Water	14.00	per cent.
Ashes	1.14	„
Fat	2.36	„
Nitrogen 0.972 per cent. corresponding with about: Albumen	6.07	„
Sugar	0.13	„
Starch	71.70	„
Cellulose, etc.	4.60	„
	100.00	

No. 6.—Rice, called *Komé*.

Specific gravity 1,370.

Water	11.18	per cent.
Ashes	1.22	„
Fat	1.43	„
Nitrogen 0,981 per cent. corresponding with about: Albumen	6.13	„
Sugar	0.15	„
Starch	74.60	„
Cellulose, etc.	5.29	„
	100.00	

I remain, dear Sir,
Yours faithfully,

B. W. DWARS.

ASIATIC SOCIETY OF JAPAN.

A General Meeting of Society was held at the Grand Hotel, Yokohama, on Saturday the 10th instant, Sir Harry Parkes, President, in the Chair.

The minutes of the last general meeting held in Tôkiô on the 27th ultimo were taken as read.

In the unavoidable absence of Mr. Satow his paper on "The Introduction of Tobacco into Japan" was read by the Recording Secretary.

At its conclusion the President observed that the evidence collected with so much care by Mr. Satow appeared to establish beyond question that tobacco had been introduced into Japan by Europeans. The fact that the plant was only known colloquially in Japan by its European name, afforded in itself a proof of that conclusion, which was scarcely shaken by the legendary notices referred to in the paper. He was not aware, however, that it had yet been satisfactorily shewn that China was wholly indebted to Europeans for tobacco. It was common to suppose that the use of that narcotic which had spread with such wonderful rapidity, and was now universal, had emanated from one spot—Cuba, where, as we know, it was first discovered by Columbus, but in a wild state. The American tobacco or *Nicotiana tobacum* is the species with which we are so familiar, but our information respecting Asiatic tobaccos is much more limited. We know that one of the Asiatic species, the *Nicotiana rustica* grows in Syria and the North of India, and the celebrated travellers Huc and Gabet have stated that this species is the tobacco of Thibet and Western China. The marked difference in appearance, between the tobacco of Sze-chuen—the principal western province of China,—and that of the centre and littoral, may have been observed by any resident in that country. Meyen speaks of carvings of tobacco pipes resembling those now in use in China being found on very old sculptures, but one must know the age of those sculptures to appreciate the value of this remark. But although China may have had its indigenous tobacco from early times, the American species may also have been introduced into the South through Luzon, as mentioned in the paper, and into the North through Japan and Korea. Dr. Williamson tells us that tobacco entered China through Manchuria, the Manchus receiving it from Japan by way of Korea in about the year 1,600. This may partly account for the severity of the Chinese Edict of 1838 referred to by Mr. Satow, which was perhaps directed as much against the Manchus, as being the national enemy of that date, as against the plant itself. Dr. Williamson found tobacco growing throughout Manchuria and in marvellous luxuriance, the leaves being of extraordinary size, twenty-four inches long and eight inches broad. The tobacco of Japan does not appear to be of superior quality, perhaps because it is not cultivated or cured with the care bestowed on the plant elsewhere, but full information respecting the growth and capacities of the Japan leaf would be very acceptable. In China its use is common to all classes and ages of the people, and to both sexes. He would be glad to see it form a larger article of export than it did at present, but he had been told that it was the spongy character of the leaf that gave it its value in Europe and that it was chiefly used for mixing with stronger qualities, because it facilitated the absorption of water.

Original from UNIVERSITY OF CALIFORNIA

Mr. Hall noticed the contradiction between the story of the practice of smoking being brought by Hideyoshi's soldiers from the Korea, and the belief that smoking was introduced into China through the Korea from Japan, and expressed his opinion that the latter was more likely to be correct.

Mr. Hodges observed that it was curious that the prohibition of tobacco by Iyeyasu should synchronise with the celebrated "Counterblast against Tobacco Smoke" issued by James I.

Mr. Hall remarked on this, that both in England and Japan the use of tobacco as a sedative had been first welcomed then condemned, and at length admitted into a large measure of general favour, and thought that there was room for a question whether opium was not passing throught similar phases of public opinion, and being now in the second stage, might not at some future time reach the third stage and come into general use.

Mr. Tsuda remarked that to the best of his knowledge the tobacco cultivated in Japan is specifically identical with the tobacco of America, but that there has been a steady increase in the size of the leaf during the time which it has been a Japanese product.

Dr. Hepburn alluded to the wide spread use of tobacco, and the strange nature of the demand made by the human system in all climates for an article that is probably injurious.

Dr. Eldridge, classing tobacco with many other articles consumed for somewhat similar purposes, such as betel nut, cocoa, tea and coffee, alluded to the fact that tobacco appears to be the favourite article of the class, for wherever introduced it either entirely supplants the indigenous representative of its family, or at the least becomes its formidable rival. The question as to whether articles such as tobacco are injurious, neutral or positively beneficial to the human system, is still an open one as in the days of King James and Pope Urban. There is high authority for believing that the excessive development of the nervous system of man, above that of other animals, has created a want that is only to be supplied by agents of this class.

AMATEUR ATHLETIC ASSOCIATION.

Tuesday, 13th November, 1877.

Although the weather yesterday morning was all that could be wished, about midday the sky became overcast and a disagreeable wind set in from the South, which doubtless prevented many people being present at the meeting of the Athletic Association, as we were sorry to observe that the attendance was not up to the usual mark, though the Grand Stand was happily well filled with ladies. Owing to the usual two days' sport having been condensed into one, punctuality was an absolute necessity in order to get through with all the events before dark, and the members of the Committee worked hard to this effect. The Association was indebted to Admiral Patterson, Captain Young and the officers of the *Tennessee* for the attendance during the afternoon of the capital band of that vessel.

1.—100 Yards Flat. Handicap. Two Prizes. 1st Prize, "Chaa-sze's Cup."

1st Heat.

T. L. Boag, 15 yards	1
R. Ward, 10 yards	2
C. P. Hall, 6 yards	0

Boag won with plenty to spare in 10¼ secs.

2nd Heat.

Wm. Platt, 12 yards	1
E. F. Kilby, 6 yards	2
F. Walker, 2 yards	0
H. J. Gorman, 8 yards	0

Platt won a good race by a yard. Time 10¾ secs.

3rd Heat.

H. Vincent, 15 yards	1
A. J. Smith, 11 yards	2
R. Nègre, 15 yards	0
A. J. Clode, 10 yards	0

For the third time the limit man had the best of it, and won in 10 secs.

2.—Throwing at Wickets. One Prize.

C. P. Hall	1
F. Walker	0
A. J. Clode	0
H. A. Vincent	0
A. J. Smith	0
T. L. Boag	0
E. F. Kilby	0
J. J. Dare	0
W. Platt	0
Geo. Hamilton	0
A. T. Watson	0
R. Ward	0

Not a single one touched the wicket but Hall, who carried away the middle stump by a good throw. A good deal of wildness and variety was displayed by some of the competitors.

3.—150 Yards Flat. Handicap. Two Prizes. 1st Prize, "Ito Cup."

First Heat.

C. P. Hall, 12 yards	1
R. Nègre, 15 yards	0

Virtually a walk over for Hall. Time 15½ secs.

Second Heat.

A. T. Watson, scratch	†
F. Walker, 3 yards	†
W. Platt, 10 yards	3

There was a splendid race for this, Watson and Walker being placed on such even terms by the handicap that they finished with a dead heat, Platt being very close up indeed. Time 15½ secs.

Third Heat.

R. Ward, 10 yards	1
E. F. Kilby, 10 yards	0

Kilby did not complete the course, so Ward came in a winner in 16 secs.

4.—Griffins' Race. 440 Yards Flat.

Open to Competitors who have never won a Race at a previous meeting of this Association. One Prize. Presented.

H. A. Vincent	1
T. R. H. McClatchie	2
T. L. Boag	3

Vincent at once took a lead which he never resigned. Both McClatchie and Boag closed up to the leader at the top of the back stretch, and coming home McClatchie challenged Vincent and the two had a good race together, the latter proving the best, and winning by several lengths in 62 seconds.

5.—100 Yards Flat. Handicap.

For Boys under 12 years of age. Entrance Free. Three Prizes.

First Heat.

E. Brooke	1

Second Heat.

H. Vincent	1

Third Heat.

H. Von Hemert	1

Fourth Heat.

A. Edwards	1

Fifth Heat.

W. Bayne	1

Final Heat.

H. Vincent	1
A. Edwards	2
E. Brooke	3
W. Bayne	0
H. Von Hemert	0

This race, which presented the usual features, seemed to afford great amusement to the youthful competitors.

6.—440 Yards Flat: Handicap. Two Prizes. 1st Prizes, "Spectators' Cup." Presented.

R. Nègre, 60 yards	1
H. J. Gorman, scratch	2
C. P. Hall, 10 yards	3
E. F. Kilby, 15 yards	0
J. J. Dare, scratch	0
A. J. Clode, 40 yards	0
R. Ward, scratch	0

Of the seven who started but three completed the course. Nègre, who was the limit man, went steadily ahead and never lost the advantage he started with. Ward made the pace hot at the start but could not maintain it and had to retire, while Gorman put on a good spurt coming down the home straight but was too late to catch the leader, who won by several yards, a similar distance separating the second and third. Time 58 secs.

7.—Throwing the Hammer, 16 Lbs. Handicap. One Prize.

A. J. Smith, 5 feet	1
H. J. Gorman, 8 feet	0
R. Ward, 8 feet	0

Smith won by a good throw of 88ft. 4,ins., Ward being second with 85ft. 8ins.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

8.—HURDLE RACE. 120 YARDS OVER 10 FLIGHTS. Handicap. 2 Prizes.

T. R. H. McClatchie, 10 yards	1
G. Charlesworth, 10 yards	2
A. J. Smith, scratch	0
A. T. Watson, 6 yards	0

This was a capital race, as McClatchie and Charlesworth who had started on even terms, took the last hurdle together, the former winning in the run in by a very little. Time 20 seconds.

9.—LONG JUMP. Handicap. One Prize.

A. J. Smith, 2 feet	1
G. Charlesworth, 18 inches	2
J. Hall	0
A. T. Watson	0

This was rather tedious for the spectators, as the competitors seemed to have no true idea of the value of time, and much delay occurred between the various trials. Hall, the scratch man, cleared the greatest distance, viz.: 18 ft., 9 ins., but Smith by his allowance scored 19 ft., 3 ins., Charlesworth, for the same reason, being second with 19 ft.

10.—HALF MILE FLAT. Handicap. Two Prizes. 1st Prize, "The Clerk's Cup."

F. Walker, scratch,	1
A. T. Watson, 10 yards	2
R. Ward, 15 yards	0
A. J. Clode, 10 yards	0

Clode's allowance gave him the lead past the stand the first time, Ward and Watson following close together, with Walker lying far behind. Clode seemed done after passing the dressing room and was gradually overtaken by the second and third. Walker was far behind until nearing the straight, when he increased his pace, and down the home stretch surprised his opponents by a tremendous rush which carried him past them all and landed him the winner of a splendid race by several yards. Time 2 min., 23½ secs.

11.—FINAL HEAT. 100 YARDS FLAT.

W. Platt, 12 yards	1
H. Vincent, 15 yards	2
T. L. Boag, 15 yards	3

This was another good race, Platt winning by the smallest possible distance, while Vincent and Boag ran a dead head for second place. Time 10 secs. for the actual distance run. Vincent subsequently beat Boag in the run off for second place.

12.—HOP, STEP, AND JUMP. Handicap. One Prize.

J. Hall, scratch	1
G. Charlesworth, 3 feet	2
T. L. Boag, 8 feet	0

Hall at scratch was an easy winner with the good distance covered of 40 ft. 5½ ins., Charlesworth with his allowance being second with 40 ft. 3 ins.

13.—FINAL HEAT. 150 Yards Flat.

F. Walker, 3 yards	1
C. P. Hall, 12 yards	2
A. T. Watson, scratch	3
R. Ward, scratch	0

Hall looked very like the winner of this good race. Without practising the same ruse that Hippomenes did with Atalanta, Walker caused Hall to look back, by which he probably lost the race, which Walker secured just at the post in 15½ secs.

14.—THROWING THE CRICKET BALL. One Prize.

J. Hall, scratch	1
C. P. Hall, scratch	0
A. J. Clode, 2 yards	0
H. A. Vincent, 10 yards	0
A. J. Smith, 5 yards	0
A. T. Watson, 6 yards	0
J. J. Dare, 7 yards	0
H. J. Gorman, 2 yards	0
W. Platt, 5 yards	0
G. Hamilton, 2 feet	0
F. W. Strange, scratch	0

Hall from scratch threw 99 yards 2 feet and won, but Mr. Van Buren, who tried his skill though not competing, threw the magnificent distance of 115 yards 2 feet.

15.—LADIES' PURSE. 600 YARDS FLAT. Handicap. Open to Members of the Association only. One Prize—"The Purse."

E. F. Kilby, scratch	1
T. R. H. McClatchie, scratch	2
C. P. Hall, scratch	3
F. Walker,—60 yards	0
H. A. Vincent, 12 yards	0
A. T. Watson—70 yards	0
J. J. Dare—60 yards	0
R. Nègre, 12 yards	0

Kilby made the best of his position, passed those ahead of him and quickly took a lead which he kept throughout. McClatchie entered the straight close up to him and made a race home with Kilby, but the latter was too good and won easily. The penalized men were never in the race. Time 1 min., 33 secs. The winner was led up to the Grand Stand and received the purse from Mrs. Enslie, who in a few well expressed words congratulated him on his success.

16.—HIGH JUMP. Handicap. One Prize.

A. T. Watson, 6 inches	1
A. J. Smith, 1 inch.	2

Watson won by clearing 5 feet.

17.—ONE MILE FLAT. Handicap. Two Prizes. 1st Prize "Merchant's Cup."

F. Walker, scratch	1
A. J. Clode, 180 yards	2
T. R. H. McClatchie, 120 yards	0
A. J. Smith, 200 yards	0
A. T. Watson, 40 yards	0

This was a very hollow affair, one by one retiring with the exception of Clode and Walker, and the former only just struggling on to secure second place. The time was consequently wretched, 5 mins., 38½ secs.

18.—POLE JUMP. Handicap.

G. Charlesworth, 6 inches	1
A. J. Smith, scratch	2

Charlesworth cleared 8 ft. 1 in., which his allowance brought up to 8 ft. 7 ins., Smith failing to beat that.

19.—CONSOLATION. Once Round.

For all who have started, but not won a prize at this meeting. One Prize. Presented by the winners at this meeting.

R. Ward	1
J. J. Dare	0
H. J. Gorman	0

This was virtually a walk over for Ward.

20.—STEEPLE CHASE. Handicap. Two Prizes. 1st Prize, Double-barrelled Gun. Presented by Lieut. Fagan, R.M.L.I.,

H. J. Gorman, 90 seconds	1
E. F. Kilby, 60 seconds	2
R. Ward, 90 seconds	0

There being only three competitors for this, of whom only two completed the course, the race was robbed of much of its amusement. Gorman was in far better condition than the others and completed the distance with all its trying obstacles without much apparent distress, Kilby following him at a long interval.

Darkness was gathering when all was concluded, and the successful competitors flocked to the Grand Stand to receive their prizes at the hands of Mrs Young, who gracefully congratulated each lucky recipient, or happily alluded to the manner in which the prize had been won. Mrs Dare presented the Champion Quarter Mile Cup to Mr. Watson, who some few days ago established his right to retain it, and hoped he would be successful in competing for it the third time, so that it might pass into his undisputed possession. With three hearty cheers for the Ladies, three more for the Admiral, Captain and Officers of the *Tennessee*, and finally three cheers for the Tōkio competitors, the meeting was brought to a very successful termination.

Over four weeks have elapsed since the pedestrian Gale commenced his self-imposed task of attempting to walk 1,500 miles in 1,000 consecutive hours at Lillie Bridge, and every hour he has walked his mile and a half off in excellent fashion, keeping well within time. There is, therefore, every probability that he will succeed, though even so far the performance is unprecedented. Gale completed 1,000 miles at 8h. 16m. p.m. on the 22nd inst., in the presence of a large company, when he walked the mile and a half in 15m. 14s. (mile time, 10min. 31sec.), which is the fastest time he has made so far. His condition is, on the whole, favourable, although now and then when he starts after a nap he limps a bit, but this passes off when he has gone a lap or so and warmed to his work, and he generally finishes the last half-mile much quicker than the first.—*L. & C. Express.*

According to the latest news from East Africa, the slave trade was never so utterly suppressed as now. The sea and land traffic is quite at an end, thanks to the cordial action of the Sultan of Zanzibar and the Consul-General, Dr. Kirk, working on an intelligent plan. The Sultan, in order to maintain this state of things, is organising a force of 500 negro soldiers, to be armed with Martini-Henry rifles and a Gatling gun field-piece. Lieut. Matthews, of Her Majesty's ship *London*, is engaged in organising the force.—*L. & C. Express.*

We are glad to learn that Mr Taro Ando, the popular Vice-Consul for Japan at this port, has been promoted to the rank of full Consul.—*China Mail.*

A rumour reaches us that the measures of retaliation which the Cantonese Authorities mean to take for the insult they consider themselves to have received from the Macao Authorities, are likely to consist of laying an embargo on all Chinese junks trading with Macao, in the hope thereby to ruin its trade, and consequently its prosperity and endanger even its existence as a Colony.—*China Mail.*

Correspondence

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

SIR,—It is well known here that the U. S. S. *Alert*, commanded by Lieut. Commander A.S. Barker, was ordered by Admiral Reynolds in May last to go to Dampier's Strait and the neighbouring islands in search of sixteen white men and one woman supposed to have been cast away upon one of those islands. It is also known that the *Alert*, leaving Yokohama on the 12th May, and proceeding by the way of the Bonin and Marianna or Ladrone Islands, to Dampier's Strait, cruised about among the numerous islands in that vicinity but failed to find the supposed shipwrecked party, or even to hear of any such unfortunates having been there.

At Gebi, the most northern of those islands on the east side of Gilolo Passage, one of the natives showed to Commander Barker a written paper left there by the Captain of the British barque *Unanima* from St. John, New Brunswick, in January last, in which he stated that his wife having died near Gebi, he had put into the harbour on its northern side where is good anchorage, and buried her on a small island called Fow that protects the harbour from the force of the sea, and thus furnishes an excellent shelter for vessels that stop there. As the *Unanima* was said to have some sixteen to nineteen persons on board besides the Captain's wife, it seemed likely that the report given to the Captain of the American barque *Agate* in February last by natives of Battanta and King William's Island that there were sixteen men and one woman on some island to the north of Battanta, was based upon the affair of the *Unanima's* touching at Gebi, and the burial of the Captains' wife there. Accordingly Commander Barker made no further search for the supposed castaways, except to steam eastward through the islands that lie between Gebi and Waigiou, and then running along the whole northern coast of the latter, putting in at two harbours by the way, he rounded the Eastern extremity of Waigiou and a second time passed through Dampier's Strait. From thence the *Alert* proceeded to the Popa and Boe Islands to examine and survey certain dangers reported by the Captain of the *Agate* as existing in the passage between them. This being done and the ship being in want of coals, she continued her course southward to Amboina, the oldest of the Dutch colonies in the East, then again northward to Ternate, the Sooloo group, Ilo-ilo the Spanish port in Panay, and to Manila and Hongkong. At Hongkong the *Alert* was ordered to Nagasaki. Thus ended what seemed to be a fruitless search for those reported sufferers by shipwreck. By the kindness of Commander Barker I had the pleasure of making the trip in the *Alert* through the great island world that lies north and west of New Guinea. At Hongkong I left the *Alert* and went up the coast of China to Shanghai and thence to Peking. On my return to Shanghai from Peking about the 20th September, Captain Andrews, commanding one of the C.M.S.N. steamers, told me he had a Boston newspaper on board his vessel, that contained a brief account of the shipwrecked people in search of which the *Alert* had made her cruise. I take the liberty to send for publication in the *Mail* an extract from the account published in that paper, which has doubtless ere this relieved the anxieties of the friends of the castaways, and serves also to show how strange sometimes are the fortunes of those "who go down to the sea in ships."

The *Boston Advertiser* says :—"A San Francisco despatch now states that the schooner *G. S. Stevens* had "arrived at that port, and reported having fallen in with "the barque *Panic*, of New Bedford, on the 2nd of March, "the Captain of which signalled that he had on board the "crew and passengers of the schooner *Urania*, wrecked on "the island of Lokin (?). The discovery of these unfortunate people is most extraordinary, considering that the "schooner *Urania* has been missing since December, 1875. "It appears that she sailed from Kodish, Alaska territory "on the 29th December, 1875, for San Francisco, since "which time nothing has been seen or heard of her. "She had then on board, besides her crew, Mr. Sheeran, "the U. S. Collector at *Alaska*, Captain Lee and his wife "and others, making a total of sixteen men and one "woman, which is exactly the number given to the "Captain of the *Agate*, by the chief of the island "of Battanta in February." It is to be hoped that the story of the *Urania's* strange drift diagonally across the Pacific from Alaska to Dampier's Strait and her wreck there upon an island south of the equator will be given to the public by some one of those who made the passage in her, and shared in her singular fortunes. Captain Vroom, of the *Saikio Maru*, who is well acquainted with the region about Dampier's Strait, informs me that *Lokin* is not the name of the island on which the *Unanima's* people were found, but (if my memory is not at fault) Loshikin. It is a small island west of Dampier's Strait, where, as is well known, the number of islands is very great.

S. R. BROWN.

Law Reports.

IN H. B. M.'s PROVINCIAL COURT, KANAGAWA.

Before H. S. WILKINSON, Esq., Acting Law Secretary.

Thursday, November 15, 1877.

AH CHOY *vs.* JOHN GRIGOR.

(Adjourned from the 3rd October last.)

Judgment was delivered to-day in this case as follows :—

In this case the plaintiff sues the defendant, as executor, for the sum of $500.00, alleged to have been lent by the plaintiff to the defendant's testator in his lifetime, and for interest, and further for the sum of $350.00 as the value of two ponies, a carriage and harness, converted by the defendant to the use of the estate of the testator, and which, it is alleged, were the property of the plaintiff.

It is alleged in the petition and admitted in the answer, that the testator made his last will, dated the 15th January, 1876, and thereby devised all his real and personal estate, of which he should be possessed at the time of his death, unto and to the use of the defendant and one John Pitman, their heirs, executors and administrators respectively, upon trust, to convert into money such parts as should not consist of money, and out of the monies arising from such conversion and the ready money of which he should be possessed at his death, to pay, among other things, the debts of the testator ; that the testator died on the 13th January, 1877, without having revoked or altered the will, and that the same was proved by the defendant and the said Pitman on the 24th April and the 24th July, 1877, respectively. Pitman was originally joined as defendant, but it appearing at the time that he was out of the jurisdiction and had not been served, his name was struck out of the petition, and the action proceeded against the present defendant alone.

The defendant, in his answer, does not admit the debt alleged to be due, and denies generally that he converted to the use of the testator's estate any property of any kind belonging to the plaintiff. The defendant further pleads that he offered, by advertisement in the local papers, to pay all just claims upon the testator's estate, duly presented and proved by a day mentioned, but that the claims preferred by the petition were not presented until long after that day, and no proof of such claims had ever been submitted to defendant. The defendant does not, however, plead that he has distributed all assets in his hands, and the plea has not indeed been relied on. The other pleas have already been disposed of.

In addition to the defences pleaded in the answer, another defence was raised at the trial, namely, that the plaintiff is a legatee under the will of a sum of $10,000, a much larger amount than the sums claimed in the petition, and that any debt that may have been due by the testator to the plaintiff has been satisfied by the legacy. It appears from the evidence, that plaintiff lived with the testator as his wife, without being married to him, from January, 1873, up till the time of testator's death, except for an interval of some months during the testator's absence in Europe, during which time the plaintiff was maintained at the testator's expense. The plaintiff avers that in 1873 she had $500.00, which had been left her by a Mr Butcher; that the testator, knowing she had it, advised her to give it to him to keep safely for her, and that she accordingly gave him the money, he giving her in return a promissory note in the following words : "No. 122 Yokohama. Twelve months after date I promise to pay to Ah Choy the sum of $500 (five hundred dollars) Mexicans. August 25th 1873. $500. W. Rangan."

She says that this occurred in the spring of 1873, and that the note was given to her on the same day that she handed the money to the testator. But the note is dated the 25th of August, 1873 and it is probable that it was given the day on which it bears date. She says that the only persons present when this transaction occurred were the testator and herself and a Mr Meldrum, who acted as clerk to the testator. The note is in Meldrum's handwriting and signed by the testator, the testator being able to sign his own name, but being otherwise illiterate. Meldrum has been deported for vagrancy, and there is no direct evidence therefore available. But for the defendant, evidence has been brought to show that the testator was a particular man, and that if he had received a sum of five hundred dollars it would most likely have appeared in his books, and that it did not appear in his books. Evidence was also brought to show that the testator was in the habit of talking over his affairs with the witnesses and that he never mentioned the loan. But the value of this part of the evidence is very much diminished by what appears to be the fact, that he never mentioned the promissory note, and it has not been seriously denied that he gave the note. That he did give it, I find as a fact.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

It is suggested that the note was given as an inducement to the plaintiff to cohabit with the testator, but I find that the note was give some months after the plaintiff had begun to cohabit with the testator. Under these circumstances, the suggestion is a most unlikely one, and I accordingly reject it. It has also been pointed out that the plaintiff's statement as to her possession of the money has not been corroborated. But she named the person at whose hands she received it, a person still in this settlement, and gave such particulars as would have enabled the defence to have tested the accuracy of her statement. The cross-examination, indeed, appeared to me to indicate a knowledge of the existence of the money, and was directed principally to show that it had been expended by the plaintiff in her own maintenance. But in this it appears to me to have failed. The plaintiff denied that she did expend it, and explained satisfactorily that there was no necessity for expending it for the purpose suggested. It has been urged, too, that the form of the note is not consistent with the plaintiff's account of the transaction: that it would not have been made payable at the expiration of a year if the money had been given to the testator to keep for the benefit of the plaintiff. But I do not think that much importance is to be given to this circumstance as the foundation of an inference, when it was considered that the note was given by one illiterate person to another, and we have no evidence of the capacity of the amanuensis. There is the delay of the plaintiff in claiming the amount after the testator's death to be accounted for, and the fact that while putting forward other claims on the estate she did not put forward this one. But I think this is capable of explanation. She was to receive $10,000 as a legacy, and she expressed a desire to receive that and get away out of the place. She also, according to the evidence of the defendant, laid claim to nearly everything. Under those circumstances, and so long as she expected to receive all she looked for, she might well abandon any claim to receive this specific sum, nor is it surprising that, finding she could not get the whole or any part of the legacy at once, and that it was not certain how much of it she would get eventually, that she determined to make any legal claim she could against the estate.

To sum up, I am satisfied that the promissory note was given, and that the plaintiff, about the time it was given, had money to the amount for which it was given, and the explanation given by her of the circumstance of her paying it over to the testator is a probable one. On the other side there is the absence of the entry from the testator's books, and her delay in making the claim after the testator's death; and, weighing these circumstances, I come to the conclusion that the plaintiff's statement is correct, and I find as a fact that the sum of Five hundred dollars was given by the plaintiff to the testator, and that for that sum so given the promissory note produced was given by the testator to the plaintiff. I find also as a fact that this sum has never been paid.

The question then arises: has this debt been satisfied by the subsequent legacy of $10,000? The rule on the subject of the satisfaction of debts by legacies it thus stated in Williams on Executors: "It is rule established in Courts of Equity that where a debtor bequeaths to his creditor a legacy equal to, or exceeding the amount of his debt, it shall be presumed, in the absence of any intimation of a contrary intention, that the legacy was meant by the testator as a satisfaction of the debt." But then it is added: "This rule, however, though it has long prevailed, has met with the censure of several eminent judges, and the Courts have inclined to lay hold of any minute circumstances, whereupon to ground an exception to it."

This rule and one of the "minute circumstances, whereupon to ground an exception to it"—a circumstance which exists in this case are thus referred to by Wood, V. C., in the case of Dawson *v.* Dawson. (Law Reports, 4 Equity, 504)

"In the case of a legacy to a creditor, the Court, having apparently first laid down the rule that a man should be just before he is generous, and that the testator intended payment and not a benefit, endeavoured by every sort of device to escape from that rule, and has held a direction to pay debts and legacies to be an indication that both shall be paid. In a recent case before me, I held a direction to pay debts alone not to be sufficient to rebut the presumption of satisfaction; but the Master of the Rolls. in two or three subsequent cases, has held that the direction to pay debts standing alone will suffice to prevent satisaction, as in Cole *vs.* Willard, Pinchin *vs.* Simms."

And referring to the case of Lord Chichester *v.* Coventry, decided in the House of Lords, his Honour says:—

"In the House of Lords nearly every one seems to have relied on that circumstance of the direction for payments of debts. This provision being, as they say, a debt and there being a direction for payment of debts by the subsequent will, they conceived that the rule against double portions was obviated. That seems to have been the principal ground of the decision."

It appears then the most recent cases have decided, that a direction to pay debts will rebut the presumption that a legacy is intended to be in satisfaction of a debt. That there is a direction to pay debts in the will, or what is the same a trust for the payment of debts is, as already stated, alleged in the petition and admitted in the answer. On this ground, therefore, I hold that the debt has not been satisfied by the legacy. Coming to this conclusion, it is unnecessary to consider whether the giving of the promissory note is a circumstance in itself sufficient, whereupon to ground an exception to the rule as to satisfaction. This promissory note differs in one very material point from the promissory note in the case of Carr and Earlsbrooke (3 Ves. 561), cited by the Counsel for the plaintiff. In that case the promissory note was payable to order: in the present case it is not. And this difference would be a very important element of consideration in arriving at a conclusion upon the question. But it is unnecessary to give any opinion upon the point.

As to the claim for interest, I think this case comes within the principle of *Edward v. Vere* (5. B. & Ad 282.) That was a claim for interest on money, deposited with a banker for a fixed purpose, for the time after that purpose had been accomplished, and Denman C. J., after laying down that "generally speaking money, deposited with a banker, does not carry interest," held that no interest was payable in that case, because it did "not clearly appear from the agreement, that the intention of the parties was that interest should be payable by the bankers from the time the authority to retain the money was countermanded," and Littledale, J., was of the same opinion. He considered that no contract by the defendant to pay interest could be implied, "because as soon as the money ceased to be a deposit, it became applicable to the general purposes of the plaintiffs, in the same way as if it had been paid on their general account into the bankers, and then it is quite clear that the interest would have been payable by law." It appears from the evidence of the plaintiff, that the money was deposited with the testator for safe keeping. The testator in fact acted as the banker. The money was after the expiration of the year—for which no interest is claimed—available for the general purpose of the plaintiff, and the only reason why it was not drawn was that it was not required. The money, according to plaintiff's evidence, was applied for once, and it was not paid. But the testator did not decline to pay it, but advised the plaintiff to allow it to remain, as she would otherwise spend it, and he rendered it unnecessary for her to draw it, by providing for her wants out of his own funds. Even if the case did not strictly come within the principle of *Edwards v. Vere* I do not think it is a case in which interest ought to be allowed. There is no express agreement in the promissory note to pay interest. The rule in such cases is thus laid down in *Cameron v. Swith* (2 B.& Ad. 305). Bayley, J., says: "I am quite satisfied that the distinction is between those cases, where there is an express undertaking by the party to pay both principal and interest, and those where he undertakes to pay the principal only. In the latter case, the interest is no part of the debt, but only in the nature of damages, and "although by the usage of trade, interest is allowed on a bill, yet it constitutes no part of the debt, but is in the nature of damages, which must go to the jury, in order that they may find the amount; and it is competent for them either to allow five per cent., according to their judgment of the value of money, or they may even allow nothing, in case they are of opinion that the delay of payment has not been occasioned by the default of the holder." In *Keene* and *Keene* (27 L. J. C. P. 88). which was an action upon a bill of exchange, Wiles, J., said: "The jury are not bound to give interest, but may give it according to the circumstances of the case." And the circumstances of the case here show me, that, so far as any intention can be drawn from them, it was not the intention of either of the parties that interest should be paid. The interest will therefore be disallowed.

The evidence with regard to the carriage is that the testator, having gone to Europe, and having, after taking the plaintiff as far as Hongkong, left her there, wrote to the plaintiff a letter, in which the following sentence occurs: "I have been laying out a lot of money for you; among other things I bought a beautiful carriage, which is to go out to Yokohama in the ship *Lothair*." What occurred after the carriage arrived is not very clear, but looking at the whole of the evidence, I find that there never was any delivery of the carriage by the testator to the plaintiff, and it never was in her sole custody. When the plaintiff went out in the carriage, the carriage was driven by the testator, and the testator otherwise acted as if the carriage was his own property. Viewed in the light of the subsequent acts of both of the parties, I am of opinion that the testator did not intend the carriage as an absolute gift to the plaintiff, and the plaintiff did not understand it to be such a gift. I find that the carriage, together with the horses and harness, was the property of the testator at his death, and this part of the plaintiff's claim must be dismissed.

There will, therefore, be judgment for the plaintiff for $500. Cost will be allowed to the amount of $75.00.

REUTER'S TELEGRAMS.

LONDON, November 15th, 1877.

INTELLIGENCE FROM THE SEAT OF WAR.

Despatches report that Russian Troops are crossing at Etropalgass ? their destination is believed to be the Head Quarter's of the Russian Army.

Osman Pacha is preparing to break through the Russian lines.

General Skobeloff has captured Greenhill's Redoubt at Plevna.

LONDON, November 14th, 1877.

Suleiman Pasha is in occupation of Roumelia.

Azis Pasha has been appointed Commander of the Turkish troops at Rasgrad.

According to a Russian official despatch the battle at Azizie is substantially confirmed.

FRANCE.

President MacMahon has requested the French Ministry to retain office.

INTELLIGENCE FROM THE SEAT OF WAR,

LONDON, November 12th, 1877.

Despatches report that the Russians are bombarding Batoum.

According to an official Turkish despatch received from Kars the Russians summoned the garrison of Kars to surrender within twenty-four hours but received a reply from the Turkish Commander, "that he was determined to resist to the last extremity."

LONDON, November 13th, 1877.

Despatches report that the Russian Forces have completely invested Plevna, which place the *Daily News* states has been amply provisioned for five weeks.

The Russian Government has opened a Subscription Loan for fifteen millions sterling at 5 per cent.

LONDON, November 11th, 1877.

INTELLIGENCE FROM THE SEAT OF WAR.

According to a Russian official despatch General Tergukasow on the 4th November defeated the forces of Ahmed Mukhtar Pacha and Ismail Pacha at Dervebazum. The Turkish troops retreated in disorder.

Ahmed Mukhtar Pacha who is fortifying Erzeroum telegraphs that the Russians attacked the Turkish Positions at Azizie on the 9th November but were defeated with very heavy loss and pursued to Dervebazum.

FRANCE.

President MacMahon has disclaimed all intention of resigning the Presidency.

ENGLAND.

The Earl of Beaconsfield, in a recent speech at the Guildhall, stated that he hoped soon, in concert with the other Foreign Powers, to secure the peace and independence of Europe.

LONDON, November, 8th 1877.

The defenders of Kars having rejected the terms of capitulation offered, the Russian forces are bombarding the City.

FRANCE.

At the Cabinet Council held yesterday it was resolved that no Ministerial modifications should take place before the opening of the Chamber of Deputies.

SEAT OF WAR.

No news from the Seat of War before Plevna has been received for several days.

The Russian forces have occupied Koprikoi.

Mobilisation has been ordered of the reserve and conscript forces in Turkey.

The Russian loss up to the 25th October is estimated at 62,000 men.

The bulk of the Russian Army has been withdrawn from the neighbourhood of the Jantra and sent to Plevna.

The Russians are preparing to invest Erzeroum.

The following message is so mutilated as to be only partly decipherable * * * * in reply to a question said * * * * cannot repeal prohibited export of Horses, while mobilisation was possibly contingent.

The Russian troops are concentrating themselves before Devebazum where the forces of Ahmed Mukhtar Pasha are strongly entrenched.

A large Russian force is in the neighbourhood of Hassan Kaleh.

It is officially stated that the rumours of foreign mediation have been denied.

The Russian Army has commenced the siege of Kars.

The *Morning Post* (newspaper) states that the Turks have abandoned and the Russians occupied Erzeroum.

The Turkish forces are retreating on Erzingan and Trebizond.

An influential Memorial addressed to Lord Derby urges the ratification of the Chefoo Convention.

LONDON, November 9th, 1877.

The French Senate and Chamber of Deputies have re-opened quietly. M. Jules Grevy has been elected President of the Chamber of Deputies.

Ahmed Mukhtar Pasha announces that the Russians attacked Deveboyum [?] Query Devebazum on the 5th November, and that the Turkish forces retreated to Erzeroum.

Despatches report that the Russian Artillery under General Scobeloff cannonaded Southern Plevna on the 5th November.

Singapore, 31st October, 1877.
[London date ?]

According to a Russian Official despatch dated the 24th instant, General Gourko, after incurring heavy losses in the attack, succeeded in capturing Dubnik on the Sofia Road. Four guns, many officers, 3,000 infantry and one regiment of cavalry were taken prisoners.

Ahmed Muktar Pacha attacked and defeated the Russians on the 23rd instant at Berzmkoi [?].

DOUBLE ACROSTIC.

My first to genealogy relates,
My second savage warfare indicates,
Together joined they've occupied of late,
The platform of a controversial state.
May schism cease, and better thoughts prevail,
The course would then more happiness entail;
Unity is strength, discord is dismay,
So better start together from to-day.

1.

This bird I ween that if you really hit,
On it proverbially you'd seem to split.

2.

A sort of hole the soldier calls a well,
When forth the midnight hour he's wont to tell.

3.

Were 'I' prefixed, I'd surely then declare
That I were present wheresoe'er you are;
But if you would prefer a better man,
All I can say is, top me if you can.

4.

Reflex by nature, science clearly shows
That when it ceases to exist it flows.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—A quiet feeling continues to prevail in our import market. For *Yarns* 16/24 medium to good qualities a moderate demand exists, and prices show a slight advance. Other counts and spinnings are neglected. In *Shirtings*, only 7 lb. attract some notice, whereas other weights continue depressed. *T. Cloth* and *Drills* are dull. Of *Turkey Reds*, *Taffachelass* and *Velvets* some sales are reported at previous rates.

Grey Shirtings:—					White Shirtings:—		
7 lbs.	38½ yds.	39 in.	per pce.	$1.40 to $1.75	60 to 64 reed 40 yds.	35 in.	per pce. 2.20 to 2.40
8 lbs.	38½ yds.	44 in.	,,	1.80 to 2 20	Turkey Reds 24 yds.	30 in.	2—3 lb. per lb. 0.65 to 0.80
8 lbs. 4 to 8½ lbs.	38½ ,,	39 in.	,,	1.57½ to 2.25	Black Velvets		7.25 to 8.25
9 lbs.	38½ ,,	44 in.	,,	2.00 to 2.45	English Drills 14/15 lbs.	40 yds,	30 in. 2.40 to 2.65
T. Cloth 7lbs.	24 ,,	32 in.	,,	1.40 to 1.60	Taffachelass	12 yds,	48 in. 1.80 to 2.25

,, No. 3 Ke-pak		,,	$7.40 to $7.70	Kerosene Oil, nominal	,, $3.57 to $4.00

Kerosene Oil.—No business is reported during the week. Dealers are offering low prices.

EXPORTS.

Silk.—Our mail report is as follows:—

Since our last report was written, transactions have continued on an extensive scale, the demand being chiefly for Hanks, which have somewhat advanced and, at the close, are firm at quotations. There has been a fair enquiry for Kakeda, at an advance of about 30 dollars on last quoted rates. Other Book Silks have attracted but little attention and prices remain unaltered. A fair business has been done in Filatures.

Settlements are 1,675 bales of Hanks, 375 bales of Oshius and 100 bales of Filatures, making a total of 2,150 bales. Arrivals amount to 1,925 bales; stocks are reduced to 2,900 bales. The total export since 1st of July to date is 10,449 bales, against 15,929 bales for same period last year.

		In London at 4s. 0d. per lb.	*In Lyons at f. 5.05 per kilo.*
Hanks,—Superior	$590 to 600	21/1 to 21/5	58.00 to 59 00

Hamatski,—Good to Best	$450 to 470	16/5 to 17/1	45 00 to 47.00
,, Common to Medium	$430 to 440	15/9 to 16/1	43.00 to 44.00
Kakeda,—Extra	$630 to 650	22/5 to 23/1	62.00 to 64.00
,, Best	$600 to 620	21/5 to 22/1	59.00 to 61.00
,, Good	$550 to 580	19/9 to 20/9	55.00 to 58.00
Filatures	$620 to 750	22/1 to 26/5	61.00 to 73.00

Silk-worm Eggs.—Small purchases are being effected at lower rates, viz. 8 to 15 cents for good cards. The Italian buyers have nearly all left.

Settlements are in all about 1,100,000 cards, against 1,000,000 last year.

Tea.—Business during the past week has been rather more active, and settlement amount to some 2,400 piculs, comprising mostly low grade Teas. Prices for these are rather firmer, whilst fine classes continue in little favour. Arrivals have about equalled settlements for the period.

Common	$10.00 to $13.00	Fine	$21 00 to $24.00
Good Common	$12.00 to $14.00	Finest	$27.00 to $32.00
Medium	$15.00 to $17.00	Choice	$34.00 nominal
Good Medium	$18.00 to $20.00	Choicest	—

INSURE YOUR HEALTH

BY TAKING

HOCKIN'S

IMPROVED SEIDLITZ POWDER.

IT differs from the Seidlitz Powders usually sold in having all the ingredients in one bottle, is quite tasteless, and may be taken by persons of all ages as a *Cooling Beverage, Mild Aperient* or *Brisk Purgative* according to dose. Its extensive use during nearly HALF A CENTURY proves its valuable qualities as a Purgative Saline, and the fact that the powder retains its qualities for any number of years renders it a most reliable and efficient Domestic Medicine It will be found invaluable to Families, Travellers, or Emigrants, as a preventive or remedy in all cases of **Sickness, Headache, Bilious Attacks, Fevers,** and the other ordinary **ailments** of life.

MISCELLANEOUS.

W. & C. SCOTT & SON.

FIRST PRIZE MEDAL and DIPLOMA OF HONOUR awarded, CENTENNIAL EXHIBITION, Philadelphia, 1876. For excellence of Materials and Workmanship in their PREMIER QUALITY and medium grades. Their New PATENT TRIPLEX action and COMPENSATING LUMP.

The attention of Sportsmen is requested to the above new system of action. Its superior strength and solidity imparts greatly improved shooting powers. Hard hitting being the desideratum required is obtained by this powerful Gun.

Prices of the TRIPLEX: £22.10.0, £30.0.0, and £37.10.0. This latter is our highest quality and is marked "THE PREMIER QUALITY."

Excellent DOUBLE-GRIP BREECH-LOADERS at £8.10.0, £12.0.0, £16.0.0 and £20.0.0. Shooting guaranteed.

OUR PATENT TOP LEVER with PURDEY solid double bolt. Shooting guaranted. Sound plain finish £15/0/0. Well finished, good materials £21.0.0. Cases and implements £4, £6 and £8 extra.

In the New York International Gun Trial competition, 1873, the Committee awarded our guns the Diploma, being declared first for points of merit of action, materials, proportion and shooting qualities.

Extract from Forest and Stream, New York, December 26th, 1876. Contributed by one of the judges of awards of guns at the Centennial. "The crowning glory of the display was the case of W. & C. Scott & Son. This firm has sent more good guns to this country during the past few years than any other, and they especially commend themselves to American sportsmen from the fact that they furnish good guns, honestly made, and of high shooting powers at very moderate prices. Their TRIPLEX ACTION combines, in the highest degree, strength with simplicity, and it must rapidly secure the favor of all who test its merits."

OUR PATENT COMPENSATING LUMP strongly recommended; should be ordered on every gun (cost, 30 shillings extra). For the Sportsman abroad, this invention is invaluable, being secured against the joint becoming loose after several years wear.

CHOKE BORED GUNS.—Slight, Medium or Full.

BREECH LOADERS in all systems from lowest qualities.

SINGLE and DOUBLE MUZZLE LOADERS.

Makers of the NEW SWINBURN-HENRY Sporting Express and SWINBURN-HENRY RIFLES and Carbines taking Government Ammunition. This Rifle is a great improvement on the Martini.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded.* This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

In the columns devoted to correspondence will be found a letter from Mr. Charles Rickerby, in reply to some remarks which we were reluctantly compelled to make in our last issue, with regard to certain rumours industriously circulated by that gentleman. Mr. Rickerby has thought fit to make a denial of our statement in letters addressed to two of our contemporaries. This we should have allowed to pass unnoticed, but unfortunately Mr. Rickerby's letter in our present issue compels us again to refer to the subject. While we therefore give the letter—the studied impertinence of which sufficiently condemns it—the publicity the writer desires, it must be distinctly understood that we can admit no further correspondence on the subject, having neither time nor inclination to devote our columns to the publishing and contradicting of Mr. Rickerby's wanton and interested mis-statements. The assertions made by us were founded upon unexceptionable authority, and we are not able to withdraw one of them without impeaching the credit of gentlemen, on whose word we place far more reliance than circumstances warrant us in giving to any statements of Mr. Rickerby. We utterly deny that in the few words we found it necessary to say we have been guilty of any "discourtesy" or "coarseness" whatever. We wholly disbelieve that "a number of men of influence and standing" have "complained of the manner in which the *Japan Mail* was conducted." We confess that at the outset of our management we entered upon a mistaken line of policy, but Mr. Rickerby is the last person to twit us with having adopted a course, *which he alone counselled us to follow and encouraged us in the strongest terms to maintain.* We repeat that Mr. Rickerby since his arrival in Yokohama in September last has, in order to serve his own interests, circulated a number of utterly unfounded and unauthorized statements to the effect that this journal was about to pass into his hands, with other representations equally inexact. Without claiming to possess any "patent for publishing weekly papers" the proprietor of the *Mail* claims to have the right of retaining his property, or of disposing of it in such manner or on such terms as shall seem to him good, and Mr. Rickerby would do well to remember that

> "The man that once did sell the lion's skin
> "While the beast lived, was killed with hunting him."

By a paragraph in the *Nichi Nichi Shimbun* we learn that it is the intention of the Emperor to make a journey to Kiushiu, and visit the various provinces of that island in March next. Such an announcement surely calls for more attention than the native journals have bestowed upon it. Kiushiu has lately been the scene of the most terrible war that has convulsed this country for many years; a war in which thousands of brave men have fallen, and which has cost the Nation the lives of those who, from position and ability, should have been the support and bulwark of the Throne. It is true that the leaders of the rebellion ever claimed that it was not against the person of the Emperor that their blows were directed, but whatever their ends may have been, their attempt only resulted in untold loss to the country, embarrassment to the Government and their own complete destruction. Bitter as has been the strife, and great the provocation to take revenge, it must be admitted that in its treatment of its rebellious and conquered subjects, the Japanese Government has behaved with commendable lenity. Justice has been truly tempered with mercy. Where it could not have been blamed had it adopted the harshest measures, the sword has been slow to fall, and only a few of those who were most prominent among the leaders of the rebellion have suffered the fate which they must have been well aware would be theirs, if they fell into the hands of a justly incensed Government. In its treatment also of the people of Kiushiu, who, it well knows, were at no time too friendly towards it, the Government has behaved with a forbearance and generosity which nations laying claim to far higher civilization would do well to imitate. Such clemency cannot but bear good fruit, and it is by such means alone that the Government can change into staunch friends those who have hitherto been its bitterest enemies. The visit of His Majesty the Mikado cannot but further tend to such good results, for there is no reason that he should doubt the loyalty and devotion of his subjects to himself, and thus his presence among them may accomplish what edicts and penalties would never bring about. There is divinity doth hedge a King, and though much of the mystery and sacredness with which in former times the Emperor was surrounded has departed, there is still a vast amount of reverence felt by the mass of the people for their Heaven descended Sovereign, which may be turned to good account in conciliating the excitable provinces of the South.

A slight shock of earthquake of short duration took place to-day, shortly before one o'clock.

Earthquakes lately have been unpleasantly frequent and more than ordinarily violent, that of Thursday being sufficiently so to cause some slight alarm. In several houses, as in our own, various articles were thrown down off the shelves and brackets, causing housekeepers to lament over the destruc-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

tion of sundry bottles and pet pieces of porcelain. According to the native papers earthquake shocks have been experienced in many parts of the country. The *Osaka Nippô* reports that last month, at Giyoho-gôri in Iwaki, an earthquake occurrred which caused great destruction to property and the loss of many lives. According to the *Echo du Japon*, strange subterranean noises are heard in the neighbourhood of Fujiyama, and the dwellers in that region, fearing the outbreak of some volcanic disturbance, are leaving their homes. The great mountain has been in a state of quiescence for over a hundred and fifty years, and though such an event is of course not impossible, it is at least unlikely that it will again resume its former activity.

There have, however, been longer intervals between the various eruptions of Fuji-yama, than that which has elapsed since the last outbreak. Klaproth in his Annales des Empereurs du Japon gives the following history of the sacred mountain. He states that in the fifth year of the reign of the Emperor Korei Tennô, about 286 B. C., the earth opened or sank down in the province of Omi, and formed the lake called Mitzu-no-umi, now known as Biwa. At the same time the mountain of Fuji was thrown up in the province of Suruga. In the 17th year of the reign of Kuanmu Tennô (A. D. 800) the mountain was in a state of eruption from the 14th of the third month to the 18th of the fourth month. By day a thick cloud of smoke; and by night volumes of flame mounted to the heavens, accompanied by a noise as of thunder. The cinders fell like heavy rain, covering the base of the mountain and adjacent territory with a red coating. Sixty-four years later, in the fifth month, in the reign of Seiwa Tennô, Fuji again burst forth and continued in eruption for a period of ten days, during which time immense masses of rock were cast up, of which several fell into the sea at a distance of thirty *ri* from the mountain. Many people perished by this terrible visitation, and a great number of houses were destroyed. This outbreak commenced in the neighbourhood of Asama-yama, and extended into the province of Kai, now the Yamanashi *ken*. The mountain now appears to have been quiet until the last eruption which took place in 1707, on the 22nd of the 10th month, when showers of ashes fell in the provinces of Idzu, Kai, Sagami and Musadzu. Of late years no signs of activity have been observed, and the mountain is, we believe, generally regarded as extinct.

The Yokohama Racing Association were as much favoured by the weather during their meeting this week as were the Race Club at theirs held a fortnight ago, but the result of the "discord and continued strife" which prevail among our small racing community, was just as apparent with the Association as with the Club, judging from the rather poor attendance within the enclosure, compared to what used to be the case before this wretched quarrel existed. Surely the comparative failure of both meetings should at once bring about the long talked-of and almost universally wished-for amalgamation, and the consequent cessation of this petty division. Is there no one of influence in this community to step forward and say with some show of authority,

"Let me be umpire in this doubtful strife."

The course was not in such good condition for running as many imagined, owing to the way in which it had been cut up, and this may partly account for the indifferent time in many instances made by really good ponies—notably the China ponies, as the Japan ponies as a rule excelled all previous performances. For instance, the three-quarters of a mile on the first day, for the Netherlands Cup, done by *Oyama* in 1 min., 36¼ secs., and his subsequently beating a large field on the same day, with only the interval of one race, when he ran the five furlongs for the Japan Banker's Cup in 1 min., 19¾ secs., stamp him as the finest Japanese pony that has ever appeared on this course. *Dibs* proved by his running that he was perhaps better than ever, and taking him all round, doubtless the best pony here. His performance for the three-quarters of a mile, when he ran for the Russian Cup and beat *Chief Mongolian* in 1 min., 36¾ secs. on a heavy course, was most creditable, and has only once been beaten by *Lintie's* time of 1 min., 36 secs. last Spring, over a flying course. *Dibs* also won the mile and three-quarters without difficulty, and took the Champion Stakes from *Vandal* on the third day, a mile and a quarter, with comparative ease. Yet *Vandal* is a good and improving pony, and carrying 10lbs. extra in the mile race for the Germania Cup on the second day, ran second to *Kickapoo* (who ought to be classed as a horse), when the race was won in the capital time of 2 min., 12½ secs. Mr. Ola was particularly unfortunate with his really excellent pony *Mohstotz*, who looked the very perfection of condition and yet only succeeded in securing the Solace Cup, though he then did the distance, five furlongs, in the fastest time ever accomplished by a Japanese pony, viz 1 min., 19¼ secs. Mr. Fairplay was another unfortunate, as he only contrived to carry off the Consolation with *Mongolian Chief*. His ponies, however, seemed scarcely up to their Spring form, added to which the programme was rather against him, as his two best ponies were excluded from, or penalized in, many of the most favourable races, while his other ponies were quite out-classed. Mr. Sinbad was also particularly unlucky in winning but one race. He has a capital little pony *The Dwarf*, but we cannot help thinking that he was injudiciously run. The declaration rule, however, gives an owner no option of taking any advantage which may occur of a good but unlooked for chance of a win, but resolutely compels hopeless competition against a superior pony. We were pleased to see that three out of the four ponies from the Imperial Stables were successful. *Sekimoto* won the Japan Silk Cup, half a mile, on the first day, *Sanbungi* the Maiden Plate, half a mile, on the second day, while *Sannohé* carried off the Silk Cup, three-quarters of a mile, just after running a very good second to *Kickapoo* for a mile. There was a marked improvement this meeting in the riding of the Japanese jockeys. Handicappers have arduous, duties and a thankless task to perform, and the time allowed them to make up the weights is so short, that it is little wonder that the result of their labours seldom gives satisfaction. On this occasion owners had some real grievance. There was little doubt but that the result of the Community Cup lay between *Oyama* and *Vandal*, as turned out to be the case. In the Cosmopolitan Cup for a mile and a half (and therefore beyond his distance) *Vandal*, carrying 11st. 6lbs., beat *The Dwarf* carrying 10st. 4lbs., and yet in the handicap race *Vandal's* was weight reduced by 2lbs., while that of *The Dwarf* was increased by 8lbs.; and *Telephone*, a pony who was never placed at either this or the Spring meeting, was made to carry 4 lbs. more than his weight for inches.

The Yokohama Racing Association had intended to hold their bettos' races this afternoon at 3 o'clock, but the state of the weather necessitated a postponement until Tuesday next, the 27th instant, at the same hour.

A sum of $50 having been presented, a three quarter mile race for all ponies has been arranged, the riders to be Japanese and Chinese horse boys who have been recommended for good conduct. Fourteen ponies have been entered for this event. The first pony will receive 70 per cent. of the prize and the second and third respectively 20 and 10 per cent. Besides this event other races of interest will take place.

According to the *Osaka Nippo*, the four cholera hospitals erected in that city at the outbreak of the disease were destined to be burnt as soon as the epidemic had died out, but it has since been decided by the authorities to allow them to remain after thoroughly cleansing and disinfecting them, so as to have them ready for occupation in the event of there being another outbreak of the disease next year.

The same paper states that the Governor of Ibaraki *ken* has issued a notification to the people under his jurisdiction, to the effect that newspapers are necessary for making known the actions and designs of the Administration, and for acquainting the people with what is transpiring at home and in the world at large. It is also through the agency of the press that the various notifications and regulations issued by the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Government are brought to the notice of the people, and when they are made thoroughly to understand the wishes of their rulers, doubtless the number of offenders against the laws will decrease. For this reason it is desirable that support should be given to the Ibaraki *Shinpô* published in that *ken*. In it will appear all the notifications and regulations issued by the *Kenchô* and any memorial that may be presented to it, with the replies thereto. It is therefore suggested that all events of interest should be communicated to the paper, so that the *Kencho* and the mind of the people may be brought to understand each other. It is also recommended that the officials in the various districts of the *ken* should subscribe to this paper, and likewise endeavour to induce all wealthy farmers and merchants to do the same, so that it may be widely circulated. Moreover it would be well that in villages a reading room should be established, where newspapers can be seen by any one who may desire to read them. The *Kencho* likewise proposes, in order to save postal expenses, to forward to each *ku*, any number of papers that may be subscribed for. The issue of such a notification shows a liberal spirit, and a praiseworthy wish to take the best steps toward gradually amending that lamentable ignorance of the affairs of their own or any other country, which must be remarked by the traveller in Japan in any district not in the immediate neighbourhood of the great centres. Unless some means of this nature can be adopted to rouse the people into taking some interest in what is going on around them, the general condition of the country districts of Japan will remain unchanged from what has existed for hundreds of years.

We see by the last papers that a treaty has been arranged between the United States Minister in London and Earl Derby respecting trade marks and trade labels. It would be a good thing for the health of its subjects who are given to the consumption of supposed foreign liquors and such like luxuries, if the Japanese Government would enter into some similar arrangement whereby the wholesale forgery of labels could be put a stop to. The wretched and poisonous compounds sold at many of the Japanese stores, and largely purchased by their native customers, must, we are convinced, lead to many cases of illness, and it is time that steps were taken to check a serious and growing evil.

The difficulties which surround the transport of the unhappy Obelisk seem to be never ending. First the *caisson* containing the needle manages while being launched to strike a rock and sustain serious damage, and there are grave fears expressed that the monolith has been broken by the shock. Then the whole apparatus gets adrift in a storm involving, sad to know, the drowning of six seamen. After a long search the *caisson* or ship, or whatever it may be called, is found off the coast of Spain, and according to the last accounts the joy of the London public at its recovery is once more changed to lamentation on learning that the *Cleopatra* will remain at Ferrot all the winter, pending the determination of salvage, the owners of the steamer which recovered the *caisson* having refused the terms offered by the contractors. Mr. Erasmus Wilson, who so generously bears the expense of the transportation of the Needle to London, may be tempted to complain with Authony that this "charm of Egypt,"

"Hath at fast and loose
Beguiled me to the very heart of loss.

The man who can hit upon the means whereby all fluctuation in the value of silver shall be done away with, certainly deserves to share the honours that shall surely be paid to him who shall discover perpetual motion or a cure for gout. Mr. Hubbell of Pennsylvania is the man who has at last solved the difficulty, and according to the *Alta* he proposes to settle the much vexed currency question once and for all in the following ingenious manner.

The fact that the two metals used for coinage cannot be got to maintain a steady relation to each other has suggested to the inquiring mind of Mr. Hubbell, of Pennsylvania, a novel method of getting around the difficulty. He proposes to fuse gold, silver and copper into a mass, and out of the amalgam make a new coin, to be called "goloid." His idea is to substitute the attraction of cohesion for the law of supply and demand.

The variations between the metals are caused by production and legislation. At one time gold is being found largely in excess of silver. The consequence is that silver goes up. At another silver is being produced out of proportion, and gold rises. In the case of the fall of silver this time, unfriendly legislation became a factor. There was also unfriendly legislation in Holland against gold in 1852. All these inconveniences the Pennsylvania scientist proposes to get rid of by welding the metals together. How can silver, he has reasoned to himself, recede or gold advance, while they are held together in solid masses?

Evidently it had not occurred to him that it would be just as easy to reduce his amalgam to its component elements, as to have fused it in the first instance. The application of heat to a crucible would be all that was necessary to bring out the law of supply and demand again in full force. But Mr. Hubbell may not, for all this, be so shortsighted as he appears to be. If Congress could be induced to adopt his suggestion he would, by virtue of his patent, be entitled to a royalty upon every "goloid" coin which had been struck. The Government could not use his invention without paying him therefor. In this way by placing the principle of the inviolability of contracts before the power conferred on Congress to coin money, he would become the arch coiner for the United States. The subsequent proceedings of the melting-pot would not have the least interest for him. All that concerned him would be the collection of his royalty as the coins were turned out.

Occasionally, some neat things in the way of currency are done at the East. There is a little nickel mine, for instance, in New Jersey, which has acquired such influence over the Government, that nickel five-cent pieces, intrinsically worth 1½ cents, are issued in large numbers from the Philadelphia Mint. The rise in this case is only 233⅓ per cent., or thereabouts. Why, therefore, should not Mr. Hubbell have hope, though his scheme may be not only flimsy, but wholly unscientific?

The *Akebono Shimbun* states that on the 23rd instant, H. E. the Russian Minister was entertained by H. E. Iwakura, *Udaijin*, at his residence, the Prime Minister and many of the *Sangi* being also present.

From the "Japan Mail Daily Advertiser."

Monday, 19*th*.

As Captain Parsell of the *Oceanic* has bidden farewell to this station, before leaving yesterday he entertained many of his friends at a tiffin on board the steamer, which was numerously attended. Admiral Pousino, lately commanding the Russian squadron in these waters, a passenger by the *Oceanic*, was present, and the band of the Russian flag-ship *Boyan* was in attendance. As the *Oceanic* steamed out from the shipping at half-past three in the afternoon, the men on board the *Boyan* manned yards, all the men-of-war dipped their flags as she passed, and the band of the *Tennessee* played the Russian national anthem.

The *Nichi Nichi Shimbun* says that those who receive decoration of the 1st class are entitled to an annual pension of 750 *yen* for life and the 2nd class to one of 500 *yen*. These will only be granted to military and naval officers, and not to civilians.

From the *Nichi Nichi Shimbun*.

It is said that the columns of the new Imperial Palace, which is to be constructed within the castle at Tôkiô, will be about 40 feet high, and made of granite brought from the island of Ogohori, off the coast of Chôshiu. This is the place whence Hideyoshi procured granite to build his castle at Osaka.

As the shooting season has arrived, the professional hunters have applied to the *Kencho* for licenses, but for some reason or other these have been withheld.

The Chinese Minister to Japan will shortly arrive, and his suite will consist of over seventy persons.

From the *Chôya Shimbun*.

At 4 p.m. on the 19th instant the officers of the Army holding the rank of Colonel and Major, and officers of a relative rank in the Navy, will be entertained by H. M. the Mikado at the Imperial palace.

Tuesday, 20*th*.

The courtesy with which foreign sportsmen are treated by those policemen who desire to examine their licenses is, as a rule, most marked, though occasionally some little vexation is caused by what may be termed excess of zeal. For instance, two foreigners, travelling in *jinrikishas*, were making their way through Tôkiô to a tea house in the suburbs where they intended to stay for the night, so as to commence shooting early next morning. It was late at night—about a quarter to twelve—and as their guns were not exposed, that they were on a shooting expedition could only be inferred from the fact

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

of their being accompanied by a couple of dogs. And yet under these circumstances were they stopped in a street in Tôkiô by a policeman, who demanded to see their licenses. This is carrying duty a little too far.

The *Mainichi Shimbun* of yesterday announced that Hirayama Jinta, the pyrotechnist who so distinguished himself here on the Mikado's birthday, has received an order from the Commissioner of the Uyéno Exhibition to prepare fireworks for a grand display at the closing ceremony on the 30th instant. Among other novelties will be represented the final defeat of the rebels at Kagoshima, which will end with the elevation of the Imperial flag as the Satsuma crest is cast down. The display will be of both day and night fireworks, commencing at noon and lasting until eight o'clock in the evening

From the *Nichi Nichi Shimbun.*

The Osaka *Fu* is four *ri* in circumference; covers a distance of one *ri* and three *chô* from East to West, thirty-three *chô* from North to South, and is divided into thirty-five *shôku* and 529 wards. It contains 98,029 houses and a population of 281,119.

From the *Akébono Shimbun.*

The *Nisshin Kan*, now at Yokohama, is to proceed to Kagoshima to take the place of the *Teibo Kan* at present on duty there.

From the *Hôchi Shimbun.*

The Army Department having made a collection of various weapons used by the Japanese from the most ancient times, has now decided to exhibit them publicly at Shôkonsha, Tôkiô.

During the war in Kiushiu the Imperialists used about 200 *ri* of telegraphic wire, which had been imported from Germany some time ago for field purposes.

Wednesday, 21*st.*

A private telegram dated November 19th, states that Kars was taken by assault by the Russians on the 18th instant.

From the *Nichi Nichi Shimbun.*

It may be remembered that the Government ordered that the houses in the district destroyed by the great fire at Tôkiô last year, should be rebuilt either in brick or plaster, the end of May being first fixed as the period at which this should be done, but the time was further extended to October. At the request of the landowners the time for this change has been again postponed until the month of April next year.

From the *Akébono Shimbun.*

The rumour is current that Shimadzu Saburô arrived in Tôkiô on the 18th instant.

From the *Hôchi Shimbun.*

On the 19th instant the higher officers of the Army and Navy were received by His Majesty the Mikado at the Imperial Palace, and afterwards entertained at dinner.

On the 30th instant a display of fireworks will take place at Akasaka, Tôkiô, in front of the Imperial Palace, when many set pieces will be shown. On the same day there will be another grand display at Shinobadzu-no-ike, Uyéno.

Thursday, 22*nd.*

A private telegram yesterday announced the loss of the *Queensbury* and *Ribstone*, both of which vessels had been despatched from New York to this port with cargoes of kerosine oil.

The *Akébono Shimbun* stated the other day that a *samurai* of Awa named Fukuda Toyojiro, had memoliarized the War Department to the effect that the strength of the standing army should be raised to 120,000 of all branches, and that a special tax should be levied on the country to cover the extra cost involved.

From the *Mainichi Shimbun.*

It is rumoured that some great change is about to take place in the army system of Japan.

From the *Hôchi Shimbun.*

The *Kasuga Kan* returned from Korea on the 19th instant, where she has been on duty for a considerable time.

From the *Nichi Nichi Shimbun.*

His Majesty the Mikado will make a journey to Kiushiu, and visit the various provinces of that Island about March next year.

From the *Chôya Shimbun.*

On the 20th instant His Excellency the Minister of the Interior and many other high officials presided over the distribution of medals, etc., at theUyéno Exhibition. There were altogether 4,356 exhibitors who received medals or certificates of merit, 6 of whom obtained medals of the 1st class, 336 of the 2nd class, 918 of the 3rd class, and 2,465 certificates of merit.

Friday, 23*rd.*

To-day being the *Shin-shô-sai*, or Harvest Festival, will be observed as a holiday throughout Japan. All the Government offices in Tôkiô will be closed to-day, as will be also the *Kencho*, *Saibansho* and Custom House here, and there will be no issue of native papers.

At a quarter to four yesterday afternoon there was a very severe shock of earthquake which made beams creak and windows shake in a somewhat alarming manner. The visitations of these unpleasant phenomena have been unusually frequent during the past month.

The *Mainichi Shimbun* states that ex-*Sangi* Soyejima Taneomi will shortly return to China.

The *Hôchi Shimbun* hears that there are three political parties in Korea. One known as the *Shinriu-tô* adheres to old customs; another called the *Kaiku-tô* declares for civilization, while the third, the *Chiuka-tô*, is the moderate party. The first named bear a hatred to foreigners and demand that all intercourse with them should cease. The moderate party are in favour of foreign trade being confined to China and Japan, and while ready to acknowledge the Japanese as friends consider that ancient customs should not be interfered with. The advanced party call for reform in the administration, and that the country should be thrown open to general foreign trade at certain ports. But the members of this party dare not as yet openly express their views, and have to be content with discussing matters among themselves.

The same paper says that a society called *Rokuzen-kai* has been formed in Tôkiô for charitable purposes, among the members of which are H. E. Iwakura, Professor Nakamura, Messrs. Tsuda, Kishida, and Shimaji. A meeting of the members was held at the residence of H. E. Iwakura on the 17th instant, to consult about the institution of a Blind Asylum.

On the 21st instant the infant Prince Také-no-Miya was removed to the palace of Také at Akasaka.

From the *Chôya Shimbun.*

Generals Yamagata and Saigo have been appointed *Gijôkuan* of the *Genro-In*, and Admiral Kawamura has also received the same appointment.

From the *Akébono Shimbun.*

On the 21st instant H. E. Okubo gave a dinner at his residence to Their Excellencies Sanjô, Iwakura, several other high officials, and the Generals who fought in the recent war.

Saturday, 24*th.*

The *City of Tokio* made a capital run over from San Francisco, viz., 5,220 miles in 18 days 18 hours, the *Belgic* on her last trip having been 20 days 4½ hours doing 5,134 miles.

The P. & O. Co.'s steamer *Sunda*, with English mails on board to the 12th October, left Hongkong on the 22nd instant at 1 p.m.

The *Mainichi Shimbun* says that all the troops are now to be withdrawn from Kagoshima as the police stationed there will be quite able keep order.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

THE REVISION OF THE TARIFF.

FROM the tone of the Japanese Press it might be imagined that a strong desire exists in this country that the existing tariff should be revised, with the view of extensive changes being introduced into it. We doubt whether among the commercial classes much enthusiasm is felt on the subject, and we are sure that by the masses of the people no interest whatever is taken in the question. But the Government, probably for excellent reasons better known to themselves than to us, view the present state of things with extreme dislike, and insist upon their right to levy what duties they please upon foreign imports. Whether their object be simply to increase their revenue, or whether they desire by protective imposts to create or foster manufacturing industries in Japan, we are not concerned to inquire. The question we propose to examine is whether they have a right to alter the tariff, and if so, what is the extent of that right. Now the treaties provide for a revision at a certain epoch long since past, but they do not seem to contemplate a rescission of any of their clauses by one of the parties without the consent of the other. Hence, it appears to us, that the demand of the Government is not one that can be insisted upon as a legal right, but at the same time we are of opinion that it is one which by the general law of nations, apart from the modifications of that law created by existing treaties, they are, inasmuch as they are a Sovereign Power, entitled to make. It would be as unwise as unjust for the Treaty Powers to insist upon the literal execution of vague and ill-drawn treaties, made at a time when the political condition of this country was altogether different from what it actually is. No such treaties as those which at present bind the Japanese people would be proposed to them in these days, or would ever have been proposed to even one of the South American Republics. It were, perhaps, early to concede jurisdiction over foreigners to the authorities of this country, but in every other respect we think Japan ought to be treated in precisely the same way in which any civilised power of Europe or America would be treated. The circumstances under which a right has been acquired have much to do with the morality of its exercise, and it would be ungracious, ungenerous and unjust to refuse what the Japanese demand, upon the mere ground that under existing treaties they have no legal claim to regulate their tariff except in concert with the Treaty Powers. If it should be argued that the moment the right to regulate their tariff should be granted, the Government would impose excessive duties without paying any great regard to the remonstrances of our representatives, it might be retorted that they could not be blamed for adopting a course identical with that which every civilised nation on the face of the earth, with the sole and noble exception of Great Britain, follows. We are not the keepers of the Japanese public conscience; we may offer the Government our counsel, address to them our remonstrances, and point out what we may conceive to be acts of folly or injustice on their part, but we have no right to dictate to them what their policy shall be, and the assumption direct or indirect of such a right must tend rather to confirm them in any wrong line of action they may adopt, than to dissuade them from its continuance. We are not aware that the foreign representatives have refused to concede the right in question, and we feel sure that nothing like an absolute refusal of it has ever been contemplated. But if the natural privileges of the Japanese are curtailed under the treaties, so likewise are those of foreigners, and it may be that our representatives do not feel themselves justified in making a concession on their part without an adequate concession in return. This is far from being a refusal, and of such a treatment of the question we do not think the Japanese Government can reasonably complain. Two centuries of injustice towards the whole world will be cheaply expiated by a few years of foreign tutelage. The Government, too, must remember that, however undoubted their legal right to regulate the Tariff may be, the courtesy and comity of nations oblige them to listen with respect to the counsels of the foreign representatives, and to take into just consideration the remonstrances that may be addressed them on the part of those who may conceive themselves injured by any proposed change of policy.

We do not doubt for a moment that the members of Government are fully alive to the duties of their high station, and we are confident that due weight will be given to any proper and serious criticism of their policy. As far as Englishmen are concerned, it is of course unfortunate that all the Treaty Powers with the exception of England are more or less committed to a protective policy, and therefore that the arguments in favour of free trade, that may be addressed to the Japanese Government, are likely to lose much of their force, if not by the opposition, at least by the example of every civilised country but our own. The ituation, however, is one that cannot be helped, and must be made the best of. It is some comfort to observe that the *Nichi Nichi Shimbun*, the semi-official organ, does not put forward any pronounced views in favour of a protective tariff.

As we stated at the outset, we have no means of knowing whether the proposed changes in the tariff are designed to increase the revenue or serve a protective policy. Increased duties are certain to limit the imports, and while it is doubtful whether they would yield as good a return as the Customs at present show, they unquestionably could not cause any augmentation of the revenue. The expediency of high duties as protective of native industry is too large a question for us to enter upon here. But we may note *en passant*, the strange pertinacity with which people cling to the long since exploded Mercantile Theory. The extract from the *Nichi Nichi Shimbun* which we publish in another portion of our columns, shows how firmly the writer believes that the wealth of a country consists merely of the coin it possesses, and that the most desirable state of things is that where the exports exceed in value the imports, so that a balance of coin is constantly flowing into the country. The absurdity of the position is patent enough. In the first place, as a balance of coin could not accrue to every country, the theory requires that some nations should remain poor (according to its standard) in order that others should become wealthy. In the next place, as in the long run every country pays with its exports for its imports, it supposes that the greater the price paid for the latter, the greater the advantage to the country paying it,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

—much as if a man were to consider himself more fortunate in having to pay ten dollars for a coat than five. According to the theory in question, India, where the exports are in excess of the imports by nearly fourteen millions, ought to enjoy a high degree of prosperity, while England, where the exports are far inferior in value to the imports, ought to be at the bottom of the economical scale. The simple fact is that money is a mere commodity facilitating exchange, much in the same way that ships, railway, rolling stock, carts and horses facilitate transportation. Japan would be no richer by the possession and retention of rolling stock for ten thousand miles of railway as long as she has need only of what may suffice for the service of less than a hundred miles. Any overplus of coin beyond what is necessary to carry on the ordinary operations of commerce is merely unused capital, of no value until exchanged for something consumable, or at least of no value except as being capable of being so exchanged. As a commodity then, having a distinct and peculiar utility, just as rolling stock has a peculiar function, so to speak, to discharge in the economy of a country, it can always be obtained upon the same terms and by the same means that other useful commodities can be obtained, and for a country to aim at devoting all its resources towards the accumulation of any one commodity, money or other, is as unwise as if a man were to spend his whole revenue in the purchase of coats or hats, or any other article, which by an awkward barter, he would find himself compelled to exchange, with more or less disadvantage to himself, for bread, meat and the necessaries of life.

THE JUMBLES OF JAPANESE JOURNALISM.

SOME instruction—the reverse of that intended by the writers—but much more amusement, may be derived from a perusal of the outpourings of the Japanese mind we from time to time observe recorded in the columns of the Tôkiô papers, on the relations between this country and Western Powers—especially England, who has the ill luck to be exceptionally distinguished among her neighbours, by the malevolence and ignorance displayed in respect of her past and supposed future policy, by the enlightened and intelligent press of the Eastern Capital. The extracts from the *Hochi Shimbun* and the *Nichi Nichi Shimbun* contained in another portion of this paper, and particularly the letter of Mr. KATO MASANOSUKE, show in a striking manner the serious childishness and learned ignorance of the new generation, who wield the brush with the fury, but not with the dexterity, with which their fathers brandished the sword. We are sometimes tempted to think that such productions, as we give instances of in our columns to-day, derive inspiration from western wire-pullers; discontented gentlemen whose genius has not been understood in their own country, and who are avenging an unmerited neglect by teaching the editors of Japanese newspapers the best means of cultivating cordial relations with the nations, whose boots and hats their countrymen have appropriated with the easy conceit that they have, at the same time, made themselves masters of the arts, sciences, learning, philosophy and morality of the West. But, on further consideration, we are convinced that we should be doing an injustice to our clever contemporaries in not attributing to their own unaided fertility of conception the appalling discovery they have made of the treachery, brutality and selfishness of Englishmen, whose commercial policy renders them more 'terrible than tigers or wolves, more hateful than sharks,' and causes the sleeves of the *Nichi Nichi Shimbun*'s correspondent to drip with patriotic tears, and his vitals to escape the dangers of cholera only to be twisted with the *tormina* of a patriotic *miserere*. Of course, the silly teachings of a part of the native press meet with no acceptance among the mass of the people, and least of all among those whose avocations bring them into commercial intercourse with foreigners. But they do possess a certain influence with the over-numerous class of small officials who are the chief supporters of Japanese journalism, and whose political importance is more likely to increase than to diminish. The members of the Government and the higher officials of the various Departments of the Administration are—it were an impertinence did not the purpose we have in view make it a necessity to state the fact—far from sharing the ignorant conceit and envious malevolence of the Xenophobist party, but the political circumstances of the day are such as to give an importance to the latter out of all proportion to their deserts. Unless the pernicious tendency of their principles be counteracted by an exposure of their falsity, a real and permanent harm might be caused by the enunciation of them. The Xenophobist theory appears to be, that foreigners from the first have cherished, and still cherish, the dark thought of effecting the ruin, if not of Japan, at least of the Japanese. Englishmen, of course, are foremost in this plot against the continued existence of the people who dwell in the fair land of the Rising Sun, which is to set for ever in the ocean of Western selfishness. Crafty as they are merciless, they are to accomplish their object under the guise of the supposed kindly intercourse of commerce, and to complete the destruction of their simple victims by the singular process of clothing their nakedness at about half the cost at which that admittedly desirable end could be attained without their aid. They (we refer to the wicked English) have already met with considerable success in carrying out their nefarious policy among the unfortunate Hindoos, whom they have forced to abandon their native manufactures, and busy themselves solely with the production of raw material to satisfy the manufacturing maw of a distant island. The surest mode of ruining a people is, it seems, to furnish them with cheaper clothing and hardware than they can themselves produce, and the offer of certain necessaries of life at a low price is the certain harbinger of the direst poverty. In a word, the best means of preventing a country from becoming rich and prosperous is to enable it to save money, by spending less in the purchase of foreign manufactures than in the purchase of home made products. This is the admirable theory of that singular sect which, actuated by envy, by ignorance, by selfishness or by counterfeit patriotism, aims at increasing and perpetuating the divisions and discords of nations by the spread of the principles of Protectionism. With this doctrine, however, we are not for the moment concerned, though we cannot refer to it without a smile at the simplicity of its disciples, and a regret at the perverseness or thickheadedness of its teachers. Let us now glance for a moment at the past and pre-

sent condition of India, and as far as Englishmen with minds poisoned by the doctrines of free trade, and hearts corrupted by selfishness, missionaries of a latter-day gospel preached with a bale of cottons in one hand and the latest invented lethal weapon in the other, are capable of passing a fair judgment upon their own doings, enquire whether our presence has been a curse or a blessing to the land where glows

....."*torrens sitientes Sirius Indos.*"

No people can look back with unmixed satisfaction upon their past history, and English writers have been ready rather than slow in admitting that the record of our early relations with India is stained with many a crime and disfigured by many an error. We are, indeed, hardly as mindful as we ought to be to *laver notre linge en famille*. There is, too, something unbending in our nature, some want of sympathy with the races whom we assume the care of, that causes us to be least welcomed often where we are most beneficent, and the populations whom we treat with a perfect justice, not seldom regret—though the regret, perhaps, is more sentimental than real—the oppression of more congenial tyrants.

But that England for the last forty or fifty years has, in the main with honesty, if not always with wisdom, tried to do her duty to India is admitted by nearly every Continental publicist of eminence, and at the present day our rule is unpopular, not with the millions of toiling peasants, but simply with the hundreds of semi-Anglicised Baboos who, puffed up with ignorant conceit, and scribbling themselves into an unhealthy prominence in the columns of native journals, take advantage of the license of speech accorded them under a mild government, to rail with the bitter wrath, which those who have received so often feel against those who have conferred benefits that cannot be denied, at the rulers whose policy has rendered their existence possible.

In 1834-5 the whole foreign trade of India amounted only to the sum of fourteen millions sterling. Forty years later, in 1874-5, it was over one hundred million sterling, in other words, in the space of four decades it had septupled itself. In 1874-5 the imports amounted to £44,363,133 and the exports to £57,984,538, more than a sixth of the whole foreign trade of the United Kingdom. These figures afford the most absolute proof of the general good government of India, and strikingly exemplify the enormous progress made in that country in the space of forty years, in the face of every obstacle that differences of race, religion and language could create. During the same period, England has lent to India at very moderate interest, more than a hundred millons sterling, has built for her seven thousand miles of railway, has covered the country with good roads, undertaken and carried out irrigation works on a gigantic scale, and given her a civil and criminal code inferior to none in existence, whilst she has established a system of education which permits of the poorest ryot procuring a fair amount of instruction for his children at a trifling expense. With a firm hand the horrid rites of various sanguinary superstitions have been put down, and the evils of the caste system have been mitigated as far as possible. The tyranny of the great landowners is almost abolished, the oppressive extortions of native rule are mere remembrances of the past, rarely has the ryot to dread the raid of the freebooter, and he has but to fear his own improvidence and the occasional cruelty of Nature.

Nor can the Government of India be justly held responsible for the disastrous famines that from time to time visit the country. Dependent as the population is on a staple of food peculiarly liable to fail in a climate where droughts are far from infrequent, and not easy to preserve for any length of time, it is difficult to see how the recurrence of famines can be avoided until irrigation works on a sufficiently extended scale to obviate the dangers of a drought shall have been completed—a task requiring the labour of many years and the expenditure of vast sums of money ere its accomplishment can become possible. The history of the recent and of the present famine show what strenuous endeavours are made both in England and India to mitigate the evil. Great as the evil, too, undoubtedly is, it should be remembered that it is an occasional one only, and that, as GENERAL STRACHEY has well pointed out, in India in ordinary times there are no poor chargeable to the state, and the cost of the most disastrous famine is not more than the amount of the poor rate levied in the United Kingdom every year.

With these facts before us, it cannot be said that the Government of India, despotic though it be, is not fruitful of advantage to the people of India. The independence of Hindostan is an expression without meaning. There are, we believe, over sixty different races occupying the country between the Himalayas and Cape Comorin, speaking as many different languages and following almost as many different religions and political systems. The cry of the Baboo party is not for the independence of India, but for the supremacy of Bengal under their own administration, and to listen to it would be the signal of an anarchy in which the idle and the turbulent might find some advantage, but under which the ryot would experience only the necessity of learning the hard lesson familiar to his forefathers, but new to him, of patience under oppression. We have not space to advert to the other enormities laid to our account by the *Nichi Nichi Shimbun's* correspondent, and we must, for the present, content ourselves with assuring him of what we feel confident it is not necessary that we should assure the Government of this country, namely, that neither England nor any other Foreign Power has the slightest desire to ruin or swallow up Japan. To ruin Japan would be a suicidal policy, especially on the part of England, and the supposition of such an intention is a gross absurdity. The idea of the country being swallowed up, particularly by England, is an equally unfounded apprehension. We came here to buy silk and tea, copper and wax, fans and lacquerware as cheaply as we can, and to get as good a price as possible for our cottons, our hardware and our other imports. We believe that the freer the intercourse between Japan and Europe, the greater the advantage resulting both to the former and the latter. We offer our goods with as little force to the Japanese as they offer theirs to us, and the less commercial relations are trammelled the more profitable will they become to both parties. The only monopoly aimed at by England is the natural one of the best and cheapest producer, and while we seek by every fair means to extend our markets, we are careful not to hinder any other nation from developing its own trade in the same way. We are twitted

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

with selfishness, and so far as commerce is necessarily selfish under existing conditions, we are selfish. Our central position, our wealth and our command of manufacturing facilities, give us a certain eminence in what is known as the great commerce, which we cannot be said to occupy with injustice to others. All that we have to teach, the Japanese as well as every other nation are free to learn, and we have never shown the smallest symptom of a desire to trammel this country in the development of its resources. We dare to assert that in our policy a generous sentiment will be found, for it is by no means wholly dictated by mercantile considerations, though doubtless it is mainly based upon what we believe to be advantageous to ourselves; and we do believe it to be advantageous no less to other countries than to ourselves, that the freedom of commercial intercourse throughout the whole world should be developed to the utmost extent, as the only mode of ensuring to each people the most perfect accomplishment of the part their position and resources best qualify them to enact in the grand drama of human progress.

SPIRIT OF THE JAPANESE PRESS.

CORRESPONDENCE.

"Nichi Nichi Shimbun," 17th November, 1877.

[We are not responsible for the merits or correctness of the views expressed.]

If we turn over the pages of history and consider the vicissitudes of states in ancient and modern times, we see that, irrespective of antiquity, size or any other circumstance, all countries have acquired their fame by war and have lost it in the same way, and the greater portion of history is therefore taken up with accounts of strife and confusion. Let us enumerate some of the most manifest cases. Of late we have had the opium war in China, our own expedition to Formosa, and the war between Russia and Turkey which is going on at this moment. Of smaller affairs there have been immense numbers, and we have no time to record all the reports of a sanginary nature that have reached our ears. The lives of men of every nationality have been sacrificed to the storms of bullets and become dry bones to no purpose, the mountains wail, the shores regret, the very birds and beasts pour out lamentations. And what is the cause of this cruel spectacle, but the vulgar ambition of one or two men to acquire an empty name, and to exalt their reputation throughout the world, or the desire of greedy classes to grasp the monopoly of commerce and secure to themselves huge gains.

Though the objects contemplated in these two cases are different, both involve appealing to arms and the destruction of the tranquillity of society, and consequently merit our detestation. Nevertheless, as their objects are different, so are the evil results which they bring about unlike in magnitude and gravity. We will endeavour to examine which of the two causes the greatest amount of evil, and to show which is the most hateful and detestable.

To begin with Alexander, who at the head of a huge army tyrannized over Europe and Asia; Louis XIV who in the beginning of the 14th century invaded the provinces of Italy; and Napoleon, who devastated with an army of several myriads the Italian confederation and other countries. These had for their objects merely the acquisition of fame, the extension of their territories, and the manifestation of their military prowess to the eyes of their neighbours. In such cases, although as long as the war lasted houses were burnt, men were struck by stray bullets, families were scattered and driven to wander in the mountains and wilds, or lost their ordinary means of subsistence and were reduced to poverty, there were no enduring evils. For if the people were energetic, and industriously resumed their callings, they were at once able to repair the mischief, so that not only did they not sink down into a condition of permanent misery, but on the contrary sometimes got rid of the infinite oppression and cruelty of such a wicked ruler as Tao Wang of Yen, and so escaped out of the depths of misfortune.

On the other hand the ills caused by those who invade a country with the object of monopolizing its commerce and of gathering fruits therefrom, are much greater than those already mentioned. For example, before India was invaded by England, all branches of production were in existence, and in Bengal in particular the manufacture of cotton cloth and chintz was so flourishing, that the production was carried on in every household, and every woman worked at the loom. It is true that from time to time they were invaded by foreigners and plundered of their possessions, but still they always maintained a decent degree of prosperity. But after their defeat at Plassy, the authority of the East-India Company was established on the continent of India, and the Company gradually extended the limits of its dominions until it has become the owner of half a million of square miles of territory with a population of nearly 150,000,000. The object of England being simply to obtain the monopoly of trade, she used every means in her power to ruin the native manufactures, and permitted only the production of cotton, minerals and other raw materials, which she transported to her own territory, and after having converted it into a hundred kinds of manufactured goods, re-exported these to India, and sold them there at an extraordinary high price, so that the Indians were obliged to pay two or three dollars for the cloths made out of the raw cotton which they had sold for twenty or thirty cents. The result of this was that England in the course of time amassed enormous wealth, and reached the acmé of prosperity, while India gradually fell into such poverty as is positively painful to contemplate.

The Chinese opium difficulties likewise originated in this idea of a commercial monopoly. China was defeated at one blow by England and not only robbed of a huge indemnity, but at the present moment the importations of opium into China annually reach the amount of 20,000,000 Mexican dollars, while no one has any idea of the number of Chinese who have lost their lives by the use of this drug.

These facts enable us to see that when the love of empty fame prompts a declaration of war against a foreign country, followed by plunder and gradual deprivation of territory, the miseries of the people are but temporary, and though the cruelty and oppression of the invader may force the people to cry aloud to compassionate Heaven, the desire of swallowing up foreign nations with the idea of gaining a commercial monopoly is more terrible than tigers or wolves, more hateful than the shark. If the country meets this misfortune, no matter whether like the Irish or the East Indians, the people rise early in the morning and labour at their callings until late in the night, there is nothing to prevent their being unable to gain sufficient to provide the cost of their daily necessaries such as food and clothing, while the wife complains of hunger, children cry out with the cold, and the labourer has not a moment's ease. Why should such a dire misfortune have befallen the Irish and East Indians, who like others are lords of the creation in virtue of their humanity. When we think of these things tears moisten our cuffs and our very vitals are chilled with horror! Alas! how fearful the idea!

The truth of it is this: England has long been secretly cherishing this idea of a commercial monopoly, and is only waiting until her intercourse with Japan shall afford the desired opportunity, of which she will then avail herself, to pull off the mask, display the purposes which she has vowed to attain, and reduce our country to the condition of Ireland and East India. But if we know that her attitude towards us is animated by this idea of commercial monopoly, it is useful that we find out a way of counteracting her designs. Anyone who should refuse to examine this question would be liable to the charge of indifference to the national welfare. This is an estimate of the comparative gravity and magnitude of the evils caused by those who scheme to swallow up other countries in pursuit of an empty name, and by those who desire to make conquests abroad by obtaining a commercial monopoly.

(Signed) KATÔ MASANOSKE,
Resident at Tôkiô.

JAPAN AND THE TREATY POWERS.

("Hôchi Shimbun," 20th November.)

There are two articles in the existing treaties with foreign powers which curtail the free exercise of the rights of Japan as an independent nation in her intercourse with foreign powers. One is the clause which prevents us from exercising any jurisdiction over foreigners residing in our country, and the other is that which debars us from levying duties upon the exports and imports of the country according as we may see fit. While these clauses remain in force Japan cannot be said to enjoy the full rights which belong to her.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Now if it be impossible that both these obstructions to our just privileges can be removed at once, looking at the honour and interest of Japan, which should first be done away with?

The right of exercising jurisdiction over foreigners resident among us is a matter which is in the hands of the Ministers of the various foreign countries. This is a greatly to be regretted, for it shows a contempt for the rights of eastern nations. At the same time, whenever law cases arise in which foreigners and Japanare involved, the cases are tried at the Consulate of the defendant if he be a foreigner, or at his own *Saibansho* if he be a Japanese. It must not therefore be rashly said that the Japanese are unfairly oppressed. Moreover, the number of legal disputes between Japanese and foreigners is not large. Much then as we dislike the extra-territorial clause, it does not compare in importance with the question of the levying duties on exports and imports.

The proper development of the arts, manufactures, productions and national resources of our country depends much on the way in which the levying of duties is managed. If the government wishes to make the industries of Japan in any way compare with those of foreign countries, it must give them some assistance. Supposing that we did not possess the right to increase or decrease duties, what plan could be adopted to make our industries prosper? Surely there is no other way. The duties form, moreover, a portion of the revenue, and thus we consider that on our possessing or not possessing the power of exercising full control over the tariff question, depends the future condition of our manufactures. The possession of this right is then of far more importance than the right of exercising extra-territorial jurisdiction. The public generally only express displeasure at our not possessing the latter privilege, but to us the tariff question seems of paramount importance,

At the present time foreigners are not in enjoyment of privileges which they should possess, to wit the right of residence among the Japanese, of travelling in the interior, dealing in pension or Government bonds, and of purchasing land. In some foreign countries there are similar restrictions, but in most cases free action is permitted. It is out of the question that we should refuse to grant privileges to foreigners and at the same time expect them to yield to our demands. If we were to demand the cancelling of both the clauses that we have referred to, on these grounds it would be refused. It is of importance, then, that we should decide whether we shall first insist on having granted to us the power of jurisdiction over foreigners, which concerns mostly national honour and dignity, or the right to control the duties which are of more consequence to our prosperity. Let us consider in what way influence may best be gained. Is it by intimate association, or by a force of reasoning, or by appeal to arms? We have never heard of the rights of a country being upheld by mere intimate association or discussion. And indeed, statesmen are swayed only by the interests of their own country, and if they cannot uphold them by force of argument they resort to arms. In such a case a weak country may argue in vain for the maintenance of its rights.

But it is better to try by dint of argument than not to try at all, and we trust that the Government will work for the ends we have mentioned.

The Condition of the Country.

("Nichi Nichi Shimbun" 19th November.)

The war in Kiushiu has terminated and peace prevails throughout the land. What we have now to do is to set to work and consult about measures for increasing the power of our country.

Setting aside the question of national resources, we see that the various country districts are, as a rule, in a state of general poverty. Twenty years have passed since we commenced trade with foreigners; the value of Imports and Exports varies every year; but on the whole the Imports always exceed the Exports. The money is thus drained out of the country and consequently trade in the interior has 'collapsed. Arts and industries are decreasing and the circulation of money is bad. We may compare the present state of our country to that of a person in whose body the blood does not circulate, so that all the extremities are benumbed.

The wealth of a country consists in the amount of property possessed by the people. When heavy taxes are imposed by a Government to meet its necessities, the people are impoverished. The strength of a country is its people, and if they do not prosper neither can the country. Now that the war is over all efforts should be directed to the improvement of the condition of the people, that our nation may be thus advanced until it becomes equal to foreign powers.

Some people say that the best way to promote prosperity is by increasing the productions of the country and by developing the national industries, and that to this end protectional duties should be imposed. This plan meets with the approval of many of our own people, and indeed it may almost be said to be the universal opinion. But to put this scheme into practical execution necessitates the revision of the treaties existing between the various foreign powers, in order that Japan may have the right to levy such duties. Now, however, much we may desire to revise the treaties, if the foreign powers will not consent we can do nothing, and when it will be done even those who are crying out for protection cannot tell. The idea of protection may in itself be good, but at the present moment it is one of which no practical use can be made. We must therefore seek out some other means for restoring the prosperity of our country, and when a fitting time arrives impose protective duties.

The chief aim of protection is to place a heavy tax on imports, and thus prevent as much as possible foreign wares from coming into the country, at the same time stimulating the national industries. Owing to varieties of climate and soil, the productions of various countries differ from each other, either in kind or superiority. The supply of mutual wants by exchange of commodities is a matter of convenience to all countries, and hence arises trade.

The indiscriminate levying of heavy duties on all foreign productions so as to prevent them, if possible, from entering the country, seems a proceeding not unattended by evils. It is our opinion, therefore, that with the exception of unnecessary articles, such, for instance, as toys only used for pleasure, there can be no harm in the people's using foreign commodities required in daily life, such as food, cloth, furniture and such like.

The next question that then arises is, if protective duties be not levied, to what measures shall the Government resort to promote national industries. What we are about to suggest cannot be said to be the best means of bringing about the desired reforms, but it may be the best plan that can be adopted at present. Of course all those articles and materials required by the Army, Navy and the other Government Departments, should as far as possible be supplied by native manufacturers. For example, suppose that something which could be supplied by a foreign country for a million *yen* should cost twelve hundred thousand if made by a native manufacturer. In such a case, if the Government were to procure it from the latter source it would lose two hundred thousand *yen*, but as the money goes into Japanese pockets there would really be a gain. If the million *yen* is paid away to foreigners it is so much gone out of Japan. Even should our Government assist national industries, although to an extent of two hundred thousand in a million, we believe in a few years our manufactures might be compared with those of foreign countries. Let us suppose that a family becomes poor. In such a case all its members should work together and endeavour to regain the wealth they have lost. It is the same with a country; the Government and the people should unite and work together. If the Government, in order to make a fine show, impoverishes the people and allows the industries to degenerate, what must the result be? It surely cannot be good.

In the years of Bunkiu and Keio (1861-67) there was no great trade carried wtih on foreign countries, and the native industries were not appreciably affected by the imported goods; but since the restoration there has been as great a change in the trade as there has been in the Government. The administration did all in its power to abolish old customs, and thus peoples' minds were turned to dislike the old and embrace the new. Houses and furniture must be in foreign style, it was so much more convenient than the native fashion. Thus sprang up a bad and luxurious custom which cannot now be changed. Even in the interior there is no place where foreign goods are not to be seen. Old customs are changing, and we are being reformed. This all arises from foreign intercourse, and when we compare our condition ten years ago with that of to-day, it must be admitted that we have made a great advance in foreign science. But the good is not unaccompanied by evil, for although our laws are daily improving, the people day by day grow poorer. For this reason we must commence to do what we can towards promoting the wealth of the people and consequent power of the nation.

It will perhaps be remembered by our readers that about eleven months ago a godown in Hiogo belonging to a pawn-broker in a large way of business was burnt down under very suspicious circumstances. A considerable amount of money in silver was not touched, but *yen* 5,500 or thereabouts, was missing in *satsu*. We are now able to state that by the smartness of the native detectives *yen* 4,500 has been recovered from a junk owner, to whom the incendiarism is supposed to be also due.—*Hiogo News.*

OUT OF BOUNDS:

Being an account of a Recent Trip into Shinshiu.

On referring to my diary I find that the first entry commences "started for a rest," and these three words will explain the sole object of my journey to a province of Japan, which no Japanese thinks of visiting for pleasure, looking upon it as a kind of Siberia, and which lies out of the road of most foreign tourists. Before commencing my trip I was solemnly warned that I should have to encounter many discomforts arising from the absence of all those luxuries with which the globe trotter or eastern sybarite seeks to surround himself in the retreats of Miyanoshita, Hakone, and similar places of fashionable foreign resort; that the roads were but little traversed except in summer time, and that at this late season of the year they would be found, in certain parts, difficult if not dangerous; that the mountain scenery was the wildest in the Empire, and that if I escaped being buried in an avalanche in the passes, I might reasonably look forward to being frozen to death in a tea house. With the exception that no maiden tendered to me an unblushing invitation to stay

"and rest
"Thy weary head upon this breast,"

—for the simple reason I suppose that Yokohama contains no young person so entirely lost to all feelings of self-respect and propriety—the warnings I received very much resembled those forced upon that extremely self-willed and ill fated youth, who considered it his mission to endeavour to reach some inaccessible height, with no other aid to mountain climbing than a banner "with a strange device," which from its very size—if we can believe the representations given of it by music publishers—must have been one of the chief causes in bringing him to his tragic end.

Now the very reasons urged against my going for a holiday to such an out of the way region were exactly those which determined me to set off at once. In the first place continual rubbing shoulders with members of any limited community is apt to make you far too well acquainted with your fellow countrymen. Your time is so much taken up with the society of those by whom you are surrounded that you have no time to become acquainted with yourself. "The proper study of mankind is man" and it is well for the student sometimes to be egotistical and turn his attention to himself, and this he has no chance of doing whilst he is in the midst of an exacting community, or travels in the company of any of its members. Go away for a month or two out of the beaten track; get off the macadamized road and the daily trodden pavement; leave far behind for a while all the familiar sights and sounds of the civilised world, as you know it, and strike off into unexplored by-paths alone, and you will find, that conscience—not the deputy conscience, the looker out after peccadilloes, but as Tom Cringle says, the "grewsome carle Conscience Senior" who only pays a visit when the coast is clear and he is safe from all outside intrusion—will speak to you in friendly confidence, and obtain the hearing which would have been postponed *sine die*, if you had not been alone when he called. You are surprised to find yourself discussing certain tricks of temper and littlenesses of spirit which were allowed to pass unnoticed in the crowd, or were only noticed to be forgotten, not to be amended. You are forced to self-examination. The unaccustomed situations in which you find yourself placed by novel surroundings compel you to exercise unaccustomed reflection and self-restraint, while you are saved from the annoyance and humiliation to which the unfortunate rest-seeker is too often subjected by the constant assertion of "superior civilization," at the expense of politeness, on the part of vulgar travellers. It is indispensable to the thorough enjoyment of travelling in districts in Japan, as well as in other countries but little frequented by the Anglo-Saxon tourist, that you should respect the prejudices of the natives, and to a certain extent be able to conform to their ways of life. If you cannot do this, stop at home; if you cannot find a companion who is willing to leave his superiority behind him, go alone.

Then again, where can repose of mind and strength of body be so soon found as among the mountains? There is delight beyond words in the very sight of their snowy summits and wooded spurs, exhiliration that no champagne can give in breathing the keen pure atmosphere, and breasting their steep ascents. To lie upon a hill side watching the lazy mists roll in up into the sunny air, now changing, now veiling the mighty peaks, and hiding their terrors in a garb of beauty, is to enjoy to the utmost the luxury of blessed laziness. Besides, the only way to see a country is to walk through it, and as Shinshiu seemed to promise unusual advantages to the pedestrian, I determined to take my holiday there.

As I have said, I went solely for a rest. I am neither botanist, geologist, entomologist, or statistician. I cannot therefore attempt to give any learned description of the country through which I have recently passed. All I can do is to write a short and simple account of my journey, which, valueless as it may be from a scientific point of view, will not, I trust, prove uninteresting to the general reader.

* * * * * * * * * *

My preparations for the journey were of the slightest. Sketching materials, a couple of suits, some Japanese winter clothes, half a dozen tins of cocoa, a tin of bacon and two bottles of brandy. The plaints of a "Victim," taken into the country against his will by an uncongenial companion and compelled to adopt a Japanese regimen, once appeared in this journal. That experience occurred in his griffin days, and he suffered accordingly. The writer of those melancholy chapters has now to confess that he has since learned that it is quite possible, at least for a time, to exist with a fair amount of comfort on the food of the country. He does not wish it to be believed that he prefers it to those admirable productions of the culinary art, of which he is sometimes privileged to partake at the tables of certain of his friends. Cold beef and pickles with a glass of beer are no doubt preferable to a bowl of rice and a cup of *saké*. But Japanese cookery is not limited to this meagre fare. It attempts higher flights, and some of its productions are extremely palatable to the appetite when sharpened by a ten mile walk in the keen autumn air of Shinshiu. The little additional enjoyment derivable from European food, necessarily inferior in quality and preparation when put up in portable form, is nothing compared to the increased comfort one experiences from travelling with light baggage, and the readiness and kindness with which the foreign traveller is received by his native hosts, when they find that he demands only that polite attention which would be bestowed on an honoured Japanese guest. Moreover, by making this experiment, he becomes acquainted with the national mode of living, and there are revealed to him possibilities of cookery which would delight the hearts of the members of any Societé Gastronomique. What says Brillat Savarin? "*La decouverte d'un mets nouveau fait plus pour le bonheur du genre humain que la decouverte d'une étoile.*" I have discovered several new dishes, but at the same time cannot help expressing modest doubts as to whether the outside world would be any the happier were the secrets of their preparation to be made known. I cannot even truthfully affirm that my own feelings of ecstatic delight were always appreciably enhanced after having partaken of them.

On the 8th of October I left Yokohama with the intention of traversing the Koshiu-kaido and entering Shinshiu at Tsutaki. The first part of the journey to Hachoji should be got over as quickly as possible, and let no future traveller, if he would escape a night of misery, start late in the evening and remain at Haramachida, thinking thereby to gain time. This was the plan I unfortunately adopted, and bitterly did I repent it. The hotel at this village, although large, is the worst I have ever entered, and one would imagine that, indifferent as the average Japanese are to such matters, they would cease to frequent a house where there is such an absolute disregard of the commonest comfort or decency. From the state of the atmosphere I did not think it at all improbable that all the guests in the house—and it was very full—would find themselves like the Assyrian army when they woke in the morning. It was not, in fact, a healthy place for any one afflicted with nervous fears of cholera, and I must confess to great surprise on learning that no cases had declared themselves in the village, which was almost as ill cared for and as evil smelling as this dreadful house. When I made enquiry, and ventured to hint that some improvements might be made in certain incongruities, I was told that owing to

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

a recent fire the house was not yet in order, but I saw enough to feel sure that what was already done was intended to be permanent. If the authorities have any dread of a future visitation of cholera, and intend to pursue those praiseworthy precautions against its spreading which they have inaugurated in the more important cities and towns, I would earnestly suggest that they extend their inspection to Haramachida and similar unsavory villages.

Neither let the tourist stop at Hachoji unless he be compelled. There is but one house where foreigners can well remain, and it is not conducted in such a manner as to render a sojourn there at all desirable. As Lysimachus says of Marina's prison,

"The very doors and windows savour vilely."

In fact there seems to be in Hachoji a singular lack of that politeness and kindness of manner for which the Japanese are distinguished, and a general brazenness of immorality which I have never had to remark in any other town or village I have visited. But Hachoji has never enjoyed a particularly good reputation for its feeling toward foreign visitors. Unfortunately I was here detained for one day, owing to the non-appearance of the packhorse with my baggage from Haramachida, the owner for some inscrutable reason electing to stop one night by the way. From this time forth I always made arrangements for its transport at the *Rikuun*,* and took care to see it well ahead before I started. I could not therefore leave Hachoji until the afternoon, and as it was too late to attempt to get over the Kobotoke pass, I went on to Takawo-san, the one spot in the neighbourhood of Hachoji which is said to possess any interest,—the only interest in fact being that here the mountains commence, and that from this time forth until you get to Takasaki on the Nakasendo you will find few miles of level ground. The distance from Hachoji is a short three *ri*, and as the evening closed in gloomy and wet, I stopped at Konaji, a small and dirty mountain village, but where I found extremely comfortable quarters and excellent attention. In the best of weather by no means a cheerful spot, it was not rendered more lively by a procession of some fifteen to twenty old women, who paraded the village for about an hour in the misty gloom of the evening, headed by an old crone bent nearly double with age and rheumatism, who beat continually at regular intervals with a stick on a hollow gourd. This monotonous sound was accompanied by a feeble melancholy chaunt—a prayer I presume—on the part of the procession, which several times tottered up and down the village street. On enquiry I found that the object of this mournful demonstration was to drive away the malignant spirit of cholera, but if efficacious, it was not enlivening to the chance visitor.

There was a tremendous rain during the night, but by eight o'clock it had ceased and there were occasional gleams of watery sunlight which seemed to promise fair weather. An extraordinary appearance was, however, presented by the clouds, which rested in black masses on the hill tops, while in the upper regions of air they lay in waves of singular regularity. Between the upper and lower clouds, which were motionless, there swept at intervals with great velocity, as impelled by a powerful current, masses of dark vapour with jagged and torn edges, which rolled and curled like smoke from a large conflagration. The air below and even on the hill tops was extremely oppressive, so that on starting about nine o'clock, I found it necessary to discard all unnecessary garments and reduce my walking costume to shirt and trousers. There was a stifling feeling in the atmosphere which made breathing a difficulty, and rendered walking a painful exertion. As I ascended the Kobotoke-togi, however, the air grew fresher, and on reaching the summit of the pass the sky to the north was clear, but to the west the clouds hung heavy and threatening. The extensive view, fine as it always is, took increased beauty and grandeur from the peculiar effects of the atmosphere. Below, almost at my feet, lay dark ridges clothed with pine trees, massing themselves in purple blackness on the buttresses of the hills, and forming as it were a frame to the lovely glimpse of the distant valley of the Sagami, on which a solitary ray of sunlight struck, lighting up the glittering river among the golden rice fields. As a backgound to this, mountains rising tier upon tier, increased in grandeur and majesty by the mists which draped, but did not hide, their forms in ever varying hues of silver and opal. Far on the left there was a dreadful gathering blackness, from which at intervals burst out flying showers of rain, which swept across the scene as one might draw a gauze veil before a picture, softening and subduing, without concealing the noble outlines of the towering peaks and the autumn glory that had begun to burn upon their wooded sides.

Descending the pass,—with many interruptions from the strings of pack horses, thirty and forty in line, all loaded with grapes from Kofu and the neighbourhood—the gloom and oppression of the atmosphere increased. A few warning drops, and then mountains and valley, and even the opposite wooden slope of the narrow glen were all hidden in a grey veil of furious rain. It was more like standing under a waterfall than being caught in a shower. In a very short time the roads were converted into actual river beds, the water rolling down them in such a volume as to render it a matter of extreme difficulty to keep a footing. In one or two of the little hamlets through which I passed the water was flowing into the houses, while the drenched villagers were making frantic and fruitless efforts to divert the course of the torrents which had invaded their dwellings. At about noon the first intimation of of what was coming was given, by a gust of wind that suddenly burst forth and roared through the woods and mountain glens, leaving its course marked by torn branches and splintered trees. It passed in an instant and the air seemed more still and unbreathable than before, while the deluge of rain never ceased for a moment. When I arrived at the small village of Ushino, which stands on a hill top, to which I had considerable difficulty to attain owing to the force of the water that swept down the road, I succeeded in finding shelter at the principal inn in the place, a large but by no means over clean establishment. I had scarcely got my sodden frame into dry clothing, than without a moment's warning the tornado commenced, the stillness of the atmosphere suddenly giving place to the deafening roar and destructive fury of the gale. So unexpected was the outburst that it was with the greatest difficulty that the shutters could be closed. I was rudely aroused from my first moment of well earned rest by the bursting in of one side of my room, and the simultaneous bursting out of the other, myself being mixed up on the floor with wet clothes, paper slides, roof shingles and plaster. Then commenced a fearful struggle on the part of two exclamatory damsels and myself to close the outer shutters, which labour was only accomplished after extreme dishevelment of hair and entanglement of garments on the part of the waiting maids. In the front part of the house the wind played strange pranks, getting under the flooring and sending up planking and mats as if some malignant demon were playing football with them. And what an *inferno* it was; women screaming, men shouting and no doubt swearing as far as the Japanese language permits; children crying and refusing to be comforted on any terms; a traveller performing a pilgrimage to the shrines of Minobu, trembling and perspiring with fear, and repeating a string of very earnest and loud-voiced prayers. And indeed there was cause for alarm. The rush of the rain, the roar of the wind and the creaking of the heavy beams and perceptible swaying of the house were calculated to make one anxious; while as the gale increased, the crash of falling houses, and cries of alarm from the neighbourhood, the cracking and dull thunder of the riven and falling trees proved that the position of all was one of real danger. My room being at the back part of the house with no upper story, I retreated thither as being the safest place, but had scarcely made myself as comfortable as the uncomfortable state of things would permit, than I was startled by a frightful crash, and the partial bursting in of one side of my room, caused by the fall of the roof of the next house. Things looked very serious for about an hour, and at times it seemed that nothing could stand against the force of the storm. A large godown on the opposite side of the street toppled over and came down, carrying with it the roof and part of the side of the adjoining house,

* The *Rikuun-kaisho* is an office established in all towns and villages for the transportation of goods and baggage, and is similar to an express agency. The institution is an extremely convenient one for the traveller, as he always sure of getting his baggage safely and quickly sent forward, and of paying no more than the proper rate.

This had one good effect of frightening the chattering women and screaming children into blissful quietude. Even my fellow-traveller, the pilgrim, stopped his irritatingly monotonous prayers, I suppose on the same principle that the old lady behind a runaway horse trusted in Providence until the breeching gave way. At about five o'clock, almost as suddenly as it had burst forth, the storm died away. The rain ceased, the wind fell to a light breeze, and the wreck of village and grove and wood shone in a sunset that made everything glow with that singular yellow radiance which I have only once or twice witn ssed, and on each occasion after some terrible storm.

Picking my way over the masses of *debris* of every kind, by no means easy to walk amongst with the advantage of boots—of which I had unluckily, but one pair, sodden and useless from the morning's tramp—and rendered a particularly risky operation by the high Japanese clogs with which I was shod, I saw that there were but few of the unfortunate inhabitants in the village who would have a roof, or even a portion of one, over their heads on this or several succeeding nights, as with one or two exceptions, of which the house at which I had put up was fortunately one, every dwelling had been wrecked; the roofs swept away, and the shutters blown in, while in too many instances a mass of ruin showed where a house had stood an hour or two before. It was sad beyond expression to see the poor villagers trying to recover from the wreck of their homes the few soaked rags and broken remains of their little household belongings, or trying to make some kind of shelter for the night with a few planks set round a fire of splinters, by whose smoky flame they were trying to comfort their chilled bodies. But my sympathy for their misery was rudely interrupted by a contemplation of my own. In crossing a tangled mass of plank and broken beams one of my clogs became detached and fell into an unfathomable hole. The state of the road, deep with mud and dangerous with shingle nails and splinters, prevented my putting my foot down, and I defy any one to hop with safety on a leg terminating in a Japanese *geta*. So there I had to stand on one leg like a crane, a thing for the finger of scorn to point at, and at which little Japanese boys might well wag their heads, until by repeated expostulations and entreaties I could induce an enlightened and pitying native—may the two *sen* piece with which I presented him be to him the foundation of a fortune—to run over to the tea house and procure me the means of returning to my rest.

(To be continued.)

YOKOHAMA RACING ASSOCIATION.

AUTUMN MEETING.

FIRST DAY,

Tuesday, the 20th November, 1877.

A cold boisterous day on Monday promised ill for the prospect of the opening day for the Yokohama Racing Association's Autumn Meeting, and the state of the weather yesterday morning was not inspiriting, but before noon the cold wind which had prevailed for so long ceased to blow, the sky cleared, and although the air was keen the day was a genial one for this late season of the year, while the course itself was in fair though rather heavy condition. The races commenced at an earlier hour than usual, which would perhaps account for the rather meagre attendance to view the first two or three races, but as the afternoon wore on the Grand Stand and enclosure became better filled, the fair sex being well represented, while two Princes of the blood were present with their suites. The proceedings were enlivened by the playing of the *Tennessee's* band, which thanks to Admiral Patterson, Captain Young and the officers of that vessel, was in attendance. Two rather forlorn nigger minstrels kindly tried to create a diversion between the races, and although their songs may have been fully up to the standard of "minstrelsy," a larger number of performers were required to evolve any fun out of their proceedings. Two slight shocks of earthquake took place during the afternoon.

1.—NEGISHI CUP.—Value $100. For China Ponies that have never won a race. Weight for inches. Entrance $5. One mile.

Mr. Sinbad's *The Dwarf*, 9st. 13lbs..... 1
,, W. Fairplay's *Mongolian Wolf*, 10st. 2lbs..... 2
,, Robertson's *Bravo*, 10st. 5lbs..... 3
,, Sinbad's *The Consul*, 10st. 2lbs..... 0
,, Robertson's *Sport*, 10st. 5lbs..... 0
,, Earnest's *Bébé*, 10st. 2lbs..... 0
,, F.'s *Quasimodo*, 10st. 2lbs..... 0

Of the eight entries seven ponies went to the post, and were started at once without difficulty. *Bébé* led up the hill but could not long maintain his position, falling to the rear after passing the three-quarters together with *Quasimodo*. *Bravo* had been lying behind but was set going at the half mile and at the trees took the lead, with the *Wolf* well up. On entering the straight the race seemed to lie between these two, but all calculations were upset by *The Dwarf*, of whom nothing was expected, coming up with a rush and taking first place. The *Wolf* made a desperate effort to catch him but was unsuccessful, *The Dwarf*, ridden by his owner, winning by several lengths. The *Wolf* only just secured second place from *Bravo*. Time 2 min., 17½ secs.

2.—THE GRIFFINS' PLATE.—A Sweepstake of $10 each (with $50 added) for Japan Ponies being *bonâ fide* Griffins. Weight for inches. Five furlongs.

Major Arda's *Mameluke*, 10st. 6lbs..... 1
Mr. Verisopht's *Main Chance*, 10st. 6lbs..... 2
Messrs. Takasaki, Kataoka & Fujinami's *Fukuoka*, 10st. 2lbs..... 3
Major Arda's *Moustique*, 10st. 0lbs..... 0
Messrs. Takasaki, Kataoka & Fujinami's *Sambungi*, 10st 6lbs..... 0

All the ponies entered started, and for a wonder gave no trouble at the post. *Moustique* jumped off with the lead but was quickly joined by *Main Chance*, and the two raced together to the trees some lengths ahead of the others. *Sambungi* made a very bad start. On nearing the straight *Mameluke* and *Fukuoka* joined the leaders and a capital race ensued down the straight. At one time the Japanese colours showed to the front, but gave way to *Mameluke* and *Main Chance*, who made an exciting struggle to the post, the former securing the race by a head only, while *Fukuoka* was but the same distance from the second pony. This was an excellent race, the winner having his owner up. Time 1 min., 23¼ secs.

3.—THE RUSSIAN CUP.—Presented. Value $. For all Ponies. Weight as per scale. Entrance $5. Three quarters of a mile.

Mr. Robertson's *Dibs*, 10st. 8lbs..... 1
,, Fairplay's *Chief Mongolian*, 10st. 11lbs..... 2
,, Peter's *Skedaddle*, 10st. 2lbs..... 3
,, Ola's *Mohstotz*, 10st. 6lbs..... 0
,, F. Mason's *Dick Swiveller*, 10st. 5lbs..... 0

Mohstotz gave some trouble at the post and occasioned a tedious delay, but the ponies eventually got away to a good start, *Mohstotz* having the lead with *Skedaddle* and *Chief Mongolian* well up, *Dibs* being kept back. *Mohstotz* gave way to the other two at the trees, but *Dibs* was here set going and passing his ponies, at every stride gained on the leaders. It was a race between the three down the straight, *Dibs* gradually forging ahead, until he won a capital race by a neck only, *Skedaddle* being close for third place. Mr. Loxton rode *Dibs*. Time, 1 min., 36¾ secs.

4.—THE JAPAN SILK CUP.—Presented. Value $100. For Japan Ponies. Winner of No. 2 and of two races at any meeting excluded. Weight for inches. Entrance $5. Half a mile.

Messrs. Takasaki, Kataoka and Fujinami's *Sekimoto*, 10st. 4lbs..... 1
Mr. Verisopht's *The Moor*, 10st. 2lbs..... 2
Major Arda's *Monarque*, 10st. 6lbs..... 3
Mr. F.'s *Doctor*, 10st. 6lbs..... 0
,, Steven's *Exile*, 10st. 4lbs..... 0

Exile and *The Moor* got the best of the start and made the pace hot immediately on the fall of the flag, racing together to the straight, on entering which *Exile* indulged in his usual fancy for the outside rails and put himself out of the race. This gave *The Moor* a good opportunity, but the others soon joined him, and *Sekimoto*, singling himself out, came away when called upon, and at the distance had secured the race. The Japanese were naturally much pleased with this result, especially as the pony was ridden by a Japanese. Time 6¼ secs.

5.—THE NAVAL CUP.—Presented. Value $. For China Ponies. Winners of three races in Japan excluded. Winners of two races anywhere, and winners at this meeting 7lbs. extra. Weight for inches. Entrance $5. One mile and a half.

Mr. Robertson's *Sport*, 10st. 5lbs..... 1
,, Robertson's *Favori*, 10st. 12lbs. (7lbs. ex.)..... 2
,, Sinbad's *The Raven*, 10st. 8lbs..... 3
,, Fairplay's *Mongolian Chief*, 11st. 11b. (7lbs. ex.)..... 0
,, Earnest's *Bébé*, 10st. 2lbs..... 0

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Bébé led past the Grand Stand with *Favori* and *Mongolian Chief* at close quarters. Going up the hill all the ponies were in a cluster with the exception of *The Raven*, but at the top *Bébé* fell back. *Mongolian Chief* was the next to retire, leaving *The Raven* alone to contend against the "Blue and White." This he could not do effectually, and before entering the straight was virtually out of the race, leaving *Sport*, ridden by Captain Theobold, R.N., to run in an easy winner followed by his stable companion. Time 3 min., 31½ secs.

6.—THE NETHERLANDS' CUP.—Presented. Value $100. For Japan Ponies. Weight for inches. Entrance $5. Three quarters of a mile.

Don Carlos' *Oyama*, 10st. 2lbs. 1
Mr. Bencen's *Board of Health* (late *Sandboy*), 10st. 4lbs. 2
Messrs. Takasaki, Kataoka & Fujinami's *Sannohé*, 10st. 6lbs. 3
Mr. Ola's *Mohstotz*, 10st. 6lbs. 0
,, Verisopht's *The Convert* (late *Jim Hills*), 10st. 4lbs. 0

From the start to finish this was a trial between *Oyama* and *Board of Health*, *Mohstotz* failing to realize the expectations formed of him. *Sannohé* made a game effort but could not get on even terms with the leaders. *Oyama* came away from his opponent when called upon, and ridden by Mr. Loxton won easily by a good length. Time 1 min., 36¼ secs.

7.—THE GERMANIA CUP, No. 1.—Presented. Value $150. For China Ponies that run as Griffins in Japan last Spring. Winners at this meeting excluded. Weight 11st. for 13 hands, to give or take 5lbs. for each inch above or below. Entrance $5. One mile and a quarter.

Mr. P. Kell's *Vandal*, 11st. 0lbs. 1
,, Peter's *Skedaddle*, 10st. 9lbs. 2
,, Robertson's *Chance*, 10st. 9lbs. 3
,, Sinbad's *The Sheik*, 10st. 9lbs. 0
,, F.'s *The Boojum*, 10st. 9lbs. 0
,, Steven's *Satisfaction*, 11st. 0lb. 0
Don Carlos' *Telephone*, 10st. 9lbs. 0

When the flag fell *Boojum* was left at the post, the others getting away fairly well with *Telephone* at their head, *Vandal* and *Chance* being in close attendance fol owed by *Skedaddle*. *Telephone* fell back at the top of the hill in favour of *Vandal* and *Chance*, who raced along the back straight together. Approaching the trees *Skedaddle* joined them, and at the quarter mile *Chance* was done, so that the result lay between the other two, who made an exciting race down the straight, *Vandal*, ridden by Col. Forrester, securing the win by a couple of lengths. Time 2 min., 55¼ secs.

8.—THE JAPAN BANKERS' CUP.—Presented. Value $100. For Japan Ponies. Winners of two races at any meeting 12lbs. extra; other winners 7lbs. extra. Weight for inches. Entrance $5. Five furlongs.

Don Carlos' *Oyama*, 10st. 9lbs. (7lbs. ex.) 1
Messrs. Takasaki, Kataoka & Fujinami's *Sekimoto*, 13st. 11lbs. (7lbs. ex.) 2
Mr. Verisopht's *The Convert*, 11st. 2lbs. (12lbs. ex.) 3
,, Ola's *Lodi*, 11st. 2lbs. (12lbs. ex.) 0
,, Steven's *Exile*, 10st. 11lbs. (7lbs. ex.) 0

Oyama and *Lodi* rushed to the front when the flag fell, *Sekimoto* having the worst of the start. At the trees *Lodi* began to tail off while *Sekimoto* was rapidly decreasing the distance between himself and the leader, but had too much to pull up, and though he made a good second, was never sufficiently dangerous to *Oyama*, who, ridden by Mr. Loxton, won easily in the good time of 1 min., 19¾ secs.

SECOND DAY.

Wednesday, 21st November, 1877.

The Association was most lucky in the weather yesterday, but the attendance for the early races was not good, the departure of the Shanghai steamer perhaps preventing many being present, though as the afternoon advanced the enclosure became well filled, while the Japanese outside were in larger numbers than on any previous day of either meeting. Unfortunately there was more delay between the races than there ought to have been, and this, together with the difficulty there was in starting some races, and the dead heat for "The Maiden Plate" that had to be run off, made the last race about an hour and a half behind time. Moonlight effects are well enough in their way, but is hardly desirable to study them from the Grand Stand while a race is being run. The band of the *Tennessee* was again in attendance.

1.—THE GERMANIA CUP, No. 2.—Presented. Value $150. For all Ponies. China ponies winners of four races in Japan excluded, or winners of three races anywhere 10lbs. extra. Weight as per scale. Entrance $5. One mile.

Don Carlos' *Kickapoo*, 10st. 8lbs. 1
Mr. P. Kell's *Vandal*, 11st. 1lb. (10lbs. extra) 2
,, Fairplay's *Mongolian Wolf*, 10st. 2lbs. 2
,, Ernest's *Bébé*, 10st. 2lbs. 0

A good start was effected, when *Kickapoo* jumped off with the lead, closely followed by *Bébé*, who, hard held, was making his usual brief rush to the front. *Bébé* and *Kickapoo* led by several lengths up the hill, at the top of which the former fell back to the rear, and *Vandal* took second place and raced along the back straight with *Kickapoo*, the *Wolf* and *Bébé* being some lengths astern. *Vandal* hung on to *Kickapoo's* quarters, but could never draw level with him, though the latter swerving on entering the straight gave *Vandal* a chance. Down the straight both came at a great pace, but *Kickapoo* could not be beaten, and ridden by Mr. Loxton, passed the post two lengths ahead. The *Wolf* made a gallant effort but could never reach the leaders, and came in a bad third. The time, 2 min., 12½ secs., was most excellent, considering the winner was a Japanese pony, and *Vandal* carried 10 lbs. extra.

2.—THE MAIDEN PLATE.—Value $100. For Japan Ponies that have never won a race. Weight for inches. Entrance $5. Half a mile.

Messrs Takasaki, Kataoka & Fujinami's *Sambungi*, 10st. 6lbs. ..... †1
Mr. Verisopht's *Main Chance*, 10st. 6lbs. ..... †2
Major Arda's *Moustique*, 10st. 0lbs. 3
Messrs Takasaki, Kataoka & Fujinami's *Fukuoka*, 10st. 2lbs. 0
Mr. Alexander's *Luck's All*, 10st. 2lbs. 0

Some delay was occasioned at the post, which was not to be wondered at, but all got off eventually to a capital start, *Main Chance* leading with *Sambungi* very close up. This order they kept past the trees, where *Sambungi* drew level, all being well together. *Sambungi* was inclined to run wide at the turn, but was kept straight by *Main Chance*. A very spirited contest lasted throughout the run in, the advantage seeming to be with *Main Chance*, but on nearing the post *Sambungi*, ridden by a Japanese, made a final effort, and finished a capital race a dead heat with *Main Chance*, with Mr. Williams up. Time 64 secs.

† DECIDING HEAT.—The dead heat was run off after race No. 3, when *Sambungi* got a good lead at the start which he never resigned, through *Main Chance* came up well at the finish, being only a length behind. The time was the same as before.

3.—THE MITSU BISHI CHALLENGE CUP.—Presented. Value $200. For China Ponies. To be won at two consecutive meetings by a Pony or Ponies, the *bonâ fide* property of the same owner or owners; to be held by the last winner at each meeting until finally won. Weight for inches. Entrance $5. One mile and three quarters.

Mr. Robertson's *Dibs*, 10 st. 8 lbs. 1
,, Sinbad's *The Dwarf*, 9st. 13lbs. 2

This was a match between *Dibs* and *The Dwarf*. The former led past the stand and up the hill, *The Dwarf* closing up at the three quarters, and running level at the half mile. The two ponies raced neck and neck to the distance, where *Dibs*, who was not pressed, shot ahead and won by nearly a length, being ridden by Mr. Loxton. Time 4 min., 15 secs.

4.—THE TÔKIÔ LADIES' PURSE.—Presented. For all Ponies. China Ponies winners of four races in Japan excluded. Weight as per scale. Entrance $5. Half a mile.

Mr. Robertson's *Chance*, 10st. 2lbs. 1
,, Ola's *Lodi*, 10st. 4lbs. 2
Major Arda's *Monarque*, 10st. 6lbs. 3
Mr. Fairplay's *Mongolian Beylerbey*, 10st. 5lbs. .. 0
,, Sinbad's *The Sheik*, 10st. 2lbs. 0
,, Earnest's *Raethia*, 10st. 5lbs. 0
,, F.'s *The Snark*, 10st. 8lbs. 0
Messrs. Takasaki, Kataoka & Fujinami's *Sekimoto*, 10st. 4lbs. 0

A field of eight ponies faced the starter so that there was consequently much trouble at the post, and great delay occasioned by two false starts, and by *The Sheik* bolting round the course the wrong way. A good start was at last made when *Chance* at once took the lead with *Lodi* well up and having *Monarque* on his quarters, the rest following all together. At the turn the race might have been anyone s, all the riders working hard and not sparing whip nor spur, but at the distance *Chance*, ridden by Mr. Loxton, responded to the call made upon him, went ahead and won by several lengths in the capital time of 61¼ secs. The winning jockey was led to the Grand Stand to receive the purse from Madame Fauconnet, who congratulated him on his success. Mr. Loxton expressed his inability to make a speech or "anything," so contented himself with briefly returning his thanks.

5.—THE AKINDO CUP.—Presented. Value $100. For Japan Ponies. Winners of one race of a mile, or over, 11st. Other Ponies, weight for inches. Entrance $5. One mile.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Don Carlos' *Kickapoo*, 11st. 0lbs..... 1
Messrs. Takasaki, Kataoka & Fujinami's *Sannohé*, 10st. 6lbs. 2
Mr. Verisopht's *The Moor*, 10st. 2lbs..... 3
,, do. *The Convert*, 11st. 0lbs..... 0
,, Fairplay's *Doctor*, 10st 6lbs..... 0

All went off well together except *The Moor* who lost some lengths at the post, and was consequently some distance behind ascending the hill, while the others were all in cluster, led by *Sannohé*. At the top of the hill *Kickapoo* drew up to *Sannohé*, and the two raced round together, increasing their distance from the other ponies as they neared the trees. The race lay entirely between these two, and the rider of *Kickapoo*, Mr. Loxton, evidently had great confidence in his pony, for he kept him just ahead of his opponent without using his whip at all, while the Japanese jockey riding *Sannohé* was punishing his animal freely. *Kickapoo* was allowed to win by half a length, in 2 min., 15 secs.

6.—The Celestial Cup.—Presented. Value $115. For China Ponies. Winners of four races excluded. Winners in 1877 of three races 12st.; of two races 11st. 5lbs.; of one race 7lbs. extra; and non-competitors at this meeting 7lbs. extra. Penalties accumulative. Weight for inches. Entrance $5. One mile and a quarter.

Mr. Robertson's *Favori*, 10st. 5lbs. 1
,, Steven's *Satisfaction*, 10st. 5lbs..... 2
,, Sinbad's *The Raven*, 11st. 1lbs. (7lbs. extra)... 3
,, Fairplay's *Mongolian Wolf*, 10st. 2lbs..... 0

Favori led past the stand with *The Raven* following, *Satisfaction* at an interval and the *Wolf* lying well behind. This order was maintained up the hill, at the top of which the *Wolf* was left still farther behind. No change occurred in the position of the three leading ponies until *Satisfaction* began to creep up at the trees. *Favori* kept his lead throughout and was evidently going easily down the straight, keeping ahead of the others who were struggling hard for second place. From the distance *Favori*, ridden by Mr. Loxton, cantered in an easy winner, while the *Wolf* come upwith a rush at the end, but too late to pass any of the others. Time 2 min., 55 secs.

7.—The Silk Cup.—Presented. Value $100. For Japan Ponies. Non-competitors and winners at this meeting excluded. Weight for inches. Entrance $5. Three quarters of a mile.

Messrs. Takasaki, Kataoka & Fujinami's *Sannohé*, 10st. 6lbs..... 1
Mr. Verisopht's *The Convert*, 10st. 4lbs..... 2
,, Ola's *Mohstotz*, 10st. 6lbs..... 3
,, Ola's *Lodi*, 10st. 4lbs..... 0
,, Verisopht's *The Moor*, 10st. 2lbs..... 0
,, F.'s *Doctor*, 10st. 6lbs..... 0
Messrs. Takasaki, Kataoka & Fujinami's *Fukuoka*, 10st. 2lbs. 0

Much wearisome delay took place at the post and a false start occurred, when, unfortunately, *Mohstotz*, *Lodi*, *The Moor* and *Doctor* raced the whole course, supposing that the flag had gone down, *Mohstotz* passing the winning post several lengths ahead of the other three. A return was then made to the starter, but those ponies who had just completed the course had consequently seriously damaged their chance, and given immense advantage to the three ponies who had never left the post. When the flag at length fell *Sannohé* went to the front, having *The Convert* in close attendance, and in fact the race resolved itself into a match between these two. *Sannohé*, ridden by a Japanese, was too good for *The Convert* though the latter made a most gallant effort, and won by nearly a length. Time, 1 min., 41 secs.

8.—The American Cup.—Presented. Value $100. For China Ponies. Winners in 1877 and non-competitors at this meeting excluded. Weight for inches. Entrance $5. Three quarters of a mile.

Mr. F. Mason's *Dick Swiveller*, 10st. 5lbs..... ... 1
,, Robertson's *Bravo*, 10st. 5lbs..... 2
,, Sinbad's *The Consul*, 10st. 2lbs..... 3
,, F.'s *The Snark*, 10st. 8lbs. 0
,, F.'s *The Boojum*, 10st. 2lbs..... 0

A good start was effected, *Dick Swiveller* leading off followed by *Bravo*, *The Consul* and *The Snark*, while *The Boojum* fell out of the race almost at once. The first four named ponies kept well together in the order given until the trees were reached, where *Dick Swiveller* increased his lead, and maintained his advantage all down the straight, winning by several lengths amidst the hearty cheers of the spectators. Time 1 min., 40 secs.

9.—The Cosmopolitan Cup.—Value $. For China Ponies that ran as Griffins in Japan at the last Spring meetings, and for all beaten China Ponies at those meetings; 5lbs. extra for every race won in Japan in 1877. Penalties accumulative. Weight for inches. Entrance $5. One mile and a half.

Mr. P. Kell's *Vandal*, 11st. 6lbs. (15lbs. ex.)..... 1
,, Robertson's *Sport*, 10st. 10lbs. (5lbs. ex.)..... 2
,, Sinbad's *The Dwarf*, 10st. 4lbs. (5lbs. ex.)..... 3
,, Sinbad's *The Raven*, 10st. 8lbs..... 0
Don Carlos' *Telephone*, 10st. 2lbs..... 0

It was so dark when this race was started that nothing could be seen of the ponies across the course. *Telephone* led by several lengths passing the Stand the first time, and might have had a good chance, as he was still leading at the three furlongs when his rider broke his stirrup and was thrown out of the race. After waiting a short time a rush was heard and the ponies were known to have passed the post, but it was hardly possible to discern them. *Vandal*, with Col. Forrester up, was announced as the winner, and there seemed to be much doubt as to which pony was actually second, but it was officially given as above. Time 3 minutes 29 seconds.

Third Day.

Thursday, 22nd November, 1877.

Again was the Association most fortunate in the weather, as yesterday was a beautiful and genial day, and during the afternoon the attendance within and without the enclosure was much better than is usually the case on a third day. The Grand Stand was fairly well filled with ladies, and for the third time was the Association indebted to the band of the *Tennessee* for this welcome assistance. More punctuality was observed yesterday in starting the races than was the case on the second day, so that all were concluded before dusk.

1.—The Hurdle Race.—Value $75. For all Ponies. Over six (6) hurdles. Weight as per scale. Entrance $5. One mile and a distance.

Mr. F. Mason's *Liddesdale*, 10st. 11lbs..... 1
,, Sinbad's *The Raven*, 10st. 8lbs..... 2
,, F.'s *Doctor*, 10st. 6lbs..... 3
,, Steven's *Satisfaction*, 10st. 5lbs..... 0
Major Arda's *Moustique*, 10st. 0lbs..... 0
Don Carlos' *Oyama*, 10st. 2lbs..... 0
The Baron's *Tennessee*, 10st. 2lbs..... 0

Liddesdale was the first over the hurdle opposite the Stand, closely followed by all but *The Raven*, who baulked and lost several lengths, and *Oyama* who so persistently refused that he was quite out of the race. *Liddesdale*, ridden by Mr. Urquhart, never gave up the lead he obtained, but took every hurdle as it came without hestitation, winning in a common canter. The *Doctor*, very ably ridden by a Japanese, accompanied *Liddesdale* all round at an interval, but was beaten for second place by *The Raven* in the run in. *Moustique* got rid of his rider at the second hurdle, but this was the only mishap, as the others safely completed the course. Time 2 min., 40 secs.

2.—The Owners' Cup.—Presented. Value $100. For all Ponies. Weight as per scale. Entrance $5. Three furlongs.

Mr. Peter's *Skedaddle*, 10st. 2lbs..... 1
,, Fairplay's *Chief Mongolian*, 10sr. 11lbs. 2
,, Ola's *Mohstotz*, 10st. 6lbs..... 3
,, do *Lodi*, 10st. 4lbs..... 0
,, do *Mongolian Beglerbeg*, 10st. 5lbs..... 0
Major Arda's *Monarque*, 10st. 6lbs..... 0
Mr. F. Mason's *Dick Swiveller*, 10st. 5lbs..... 0
,, Verisopht's *The Moor*, 10st. 2lbs..... 0
,, Hugo's *The Minister*, 10st. 5lbs..... 0
,, F.'s *The Snark*, 10st. 8lbs..... 0
Messrs. Takasaki, Kataoka & Fujinami's *Sekimoto*, 10st. 4lbs..... 0

A field of eleven ponies out of thirteen entries faced the starter and for a wonder got off without much delay. When the flag fell *Skedaddle* rushed to the front followed by the ruck, with the exception of *The Minister*, who through some unfortunate mistake was left at the post. *Skedaddle* throughout kept the advantage he first obtained and was never headed, winning easily by a length, Mr. Urqubart having the mount. Time 46¾ secs.

3.—The Visitors' Cup.—Presented. Value $100. For all China Griffins imported in 1877. Winners of one race 6lbs. extra; of two races 10lbs. extra; and of more than two races 3lbs. extra for every race won. Penalties accumulative. Ponies that have run in two races and not been placed 5lbs. allowance. Non-competitors at this meeting excluded. Weight for inches. Entrance $5. One mile.

Mr. Robertson's *Bravo*, 10st. 5lbs..... 1
,, Sinbad's *The Dwarf*, 10st. 5lbs. (6lbs. extra)... 2
,, do. *The Consul*, 10st. 2lbs..... 3
,, Fairplay's *Mongolian Wolf*, 10st. 2lbs..... 0
,, Peter's *Skedaddle*, 10st. 12lbs. (10lbs. extra).... 0
,, F.'s *Quasimodo*, 10st. 2lbs..... 0
Don Carlos' *Telephone*, 9st. 11lbs. (5lbs. allowance). 0

Mongolian Wolf went to the front when the flag fell, followed by *Bravo*, *The Consul* and *Skedaddle*. On nearing the half mile *Bravo* drew level to the *Wolf* and took the lead from him

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

at the three furlongs, and could never be caught, though *The Dwarf* came up at the turn and made a strenuous effort to collar a him down the straight. The winner was ridden by Mr. Loxton. Time 2 min., 15½ secs.

4.—THE HACK RACE.—Value $50. For all Ponies being *bonâ fide* Hacks, and that have never won a flat or hack race. Ponies entered are disqualified from entering any other race, except No. 1 this day. Weight 12st. To be ridden by Jockeys who have not had a winning mount at this meeting. Entrance $5. Three quarters of a mile.

Mr. Hugo's *Antidote*, 10st. 8lbs. 1
The Baron's *Rebel*, 10st. 6lbs..... 2
Mr. Alexander's *Petitpas*, 10st. 5lbs..... 3
,, Peter's *Snake*, 10st. 6lbs..... 0

All the ponies entered went out and got off all together, but *Snake* bolted badly immediately after the start, and was hopelessly out of the race. *Petitpas* made the running, but *Antidote* was closely in attendance, ridden by Mr. Williams, and quickly showed that he could command the race, although *Rebel* joined them and appeared somewhat dangerous. However, *Antidote* ran wide at the turn and imperilled his chance, but picked up down the straight and won a very exciting race by half a length, *Rebel* and *Petitpas* making an excellent second and third. Time, 1 min., 45 secs.

5.—THE JAPAN CHAMPION STAKES.—For Japan Ponies. Compulsory on winners on 1st and 2nd days at this meeting. A Sweepstake of $10 with $5 extra for every race won. Open also to Ponies placed second, at an entrance fee of $5 to go to the fund. Entries to be made on the Course at the close of the second day's racing. 1st Pony to receive 75 per cent.; 2nd Pony to receive 25 per cent. Weight for inches. One mile.

Don Carlo's *Kickapoo*, 10st. 8lb..... 1
Messrs. Takasaki, Kataoka & Fujinami's *Sannohé*, 10st. 6lbs. 2
Messrs. Takasaki, Kataoka & Fujinami's *Sekimoto*, 10st. 4lbs. 3
Major Arda's *Mameluke*, 10st. 6lbs..... 0

Though only four ponies appeared at the post there was one false start, when *Mameluke* and *Sekimoto* ran to the five furlongs before they could be pulled up, while *Kickapoo* and *Sannohé* were only stopped at the bottom of the hill. Yet another false start occurred before they finally got away, as *Sekimoto's* rider was dilatory in coming up to the post. When the flag fell the Japanese colours led, but *Kickapoo* took second place going up the hill. At the top *Sannohé*, *Kickapoo* and *Sekimoto* were all well together and kept in this order, with *Mameluke* far behind, to the trees, where *Kickapoo* and *Sannohé* forged ahead and made the rest of the race a contest between themselves. *Kickapoo* was ridden by Mr. Loxton who never touched his animal, while the Japanese jockey on *Sannohé* was whipping severely. With his pony well in hand Mr. Loxton let out *Kickapoo* close to the post and won the race by a length. Time 2 min., 14 secs.

6.—THE CHINA CHAMPION STAKES.—For China Ponies. Compulsory on winners on 1st and 2nd days at this meeting. A Sweepstake of $10 with $5 extra for every race won. Open also to Ponies placed second, at an entrance fee of $5, to go to the fund. Entries to be made on the Course at the close of the second day's racing. 1st Pony to receive 75 per cent.; 2nd Pony 25 per cent. Weight for inches. One mile and a quarter.

Mr. Robertson's *Dibs*, 10st. 8lbs..... 1
,, P. Kell's *Vandal*, 10st. 5lbs..... 2
,, Robertson's *Sport*, 10st. 5lbs..... 3

This was looked upon as a moral certainty for *Dibs* though Mr. Robertson declared to win with the best, and the result was entirely as expected. Passing the Stand the first time, *Sport* was a little in advance, but the three kept well together to the trees, where *Dibs* took a slight lead. Down the straight *Vandal*, carrying 4 lbs. overweight, was pushed by his jockey to the utmost and felt the whip severely, but could in no wise disturb the equanimity of Mr. Loxton on *Dibs*, who, riding quietly, let his pony out close to the post and and won by a neck a race he had all along held secure. Time, 2 min., 57 secs.

7.—THE TÔKIÔ CUP.—Presented. Value $100. For Japan Ponies beaten at this meeting. Weight for inches. Entrance $5. Five furlongs.

Mr. Ola's *Mohstotz*, 10st. 6lbs. 1
,, Bencen's *Board of Health*, 10st. 4lbs..... 2
,, Verisopht's *The Convert*, 10st. 4lbs..... 3
,, ,, *The Moor*, 10st. 2lbs..... 0
,, Steven's *Exile*, 10st. 4lbs..... 0
,, Ola's *Lodi*, 10st. 4lbs..... 0
Major Arda's *Monarque*, 10st. 6lbs..... 0
Messrs. Takasaki, Kataoka & Fujinami's *Fukuoka*, 10st. 2lbs..... 0

While the ponies were at the post a rather severe shock of earthquake took place which rather startled the occupants of the Grand Stand. Much delay occurred before a good start was secured, but on the fall of the flag a good one was effected, *Mohstotz* leading and *The Moor* second, with all the others but *Exile* well together. *Exile* unfortunately bolted immediately on starting, and rushed first at the outside rails and then dashed errors to the inside rails which he broke through and then fell, fortunately without seriously hurting his rider, though the accident might have been a dangerous one. It is feared that the pony himself has been injured. No alteration in the order of the ponies was made until the quarter mile, where *The Moor* dropped behind and *The Convert* took his place, but the latter destroyed his chance of winning by running wide at the turn. *Board of Heath* was making a game attempt to reach the leader, but without avail, as *Mohstotz* passed the post several lengths ahead. *The Convert* coming in on the outside rail only secured third place. Time 1 min., 19¼ secs.

8.—THE CATHAY CUP.—Presented. Value $100. For China Ponies beaten at this meeting, being non-winners of three Races. Weight for inches. Entrance $5. Once round.

Mr. Fairplay's *Mongolian Chief*, 10st. 8lbs..... 1
Mr. Steven's *Satisfaction*, 10st. 5lbs..... 2
Mr. Sinbad's *The Raven*, 10st. 8lbs..... 3
,, Sinbad's *The Consul*, 10st. 2lbs..... 0
,, do. *The Sheik*, 10st. 2lbs..... 0
,, Fairplay's *Mongolian Wolf*, 10st 2lbs..... 0
,, do. *Mongolian Beglerbeg*, 10st. 5lbs..... 0

Beglerbeg, having a well known public character up, made the running when the flag fell, but gave way to *The Consul* and *Mongolian Wolf* ascending the hill, who led at the top by several lengths, but were rapidly picked up by *Satisfaction*, who drew level after passing the five furlongs and took a lead at the half mile which he continued to greatly increase passing the trees and entering the straight. *Mongolian Chief* had meanwhile been lying behind, but was set going at the three furlongs, rapidly gained on the leader, and gradually closing up to him down the straight, came level at the distance, and making a final effort as the post was neared, passed his opponent and won a capital race by three-quarters of a length. Time 2 min., 18 secs. The "Mongolian" stable has been very unlucky this meeting, so that this, their first win, was received with much satisfaction.

9.—THE COMMUNITY CUP.—Presented. Value $150. A Handicap for all Ponies that have run at the meeting. To be handicapped by the Stewards at the close of the second day's racing; entries to be made on the Course before the last race. Winners of Nos. 5 and 6 this day excluded, and winners of any other race after the publication of the Handicap 5lbs. extra. Entrance $10. Second Pony to save entrance fee. One mile.

Mr. P. Kell's *Vandal*, 11st. 4lbs..... 1
Don Carlos' *Oyama*, 10st. 12lbs..... 2
Mr. Verisopht's *The Convert*, 10st. 4lbs..... 3
,, Fairplay's *Chief Mongolian*, 11st. 2lbs..... 0
Don Carlos' *Telephone*, 10st 6lbs..... 0
Mr. Robertson's *Favori*, 11st. 2lbs..... 0
,, do. *Chance*, 11st. 0
,, Sinbad's *The Dwarf*, 10st. 12lbs..... 0

The Convert and *Oyama* rushed to the front when the flag fell, *Telephone* and *The Dwarf* having the worst of the start. Rising the hill all the ponies were in a ruck headed by *Oyama* and *The Convert*, with the exception of *The Dwarf* who was some lengths behind. *Vandal* and *Chief Mongolian* improved their positions at the half mile, and *The Convert* was passed by the former at the trees, *Oyama* still leading. All down the straight *Oyama* and *Vandal* were racing neck and neck with each other, and it was only just at the post that the latter came away and won by a neck, *The Convert* being well up for third place. Time 2 min., 14¼ secs.

The Betto's Races will take place on Saturday afternoon at 3 o'clock, and it is probable that some interesting matches will be arranged to come off about the same time, so that the Course will offer considerable attractions to visitors. At this meeting Senor Don Alvarez acted as Judge, and Messrs. Bayne and Barnard as Starters.

Early on Thursday morning a sub-inspector of Japanese police on duty in Tammondori noticed two suspicious looking characters at the corner of the road leading up to the barracks, and accosted them. They instantly made a bolt, another man jumping off the tiles into the road, and the latter, when the police officer tried to arrest him drew a sword and wounded him in three or four places, making good his escape. It may seem an extreme measure to arm the Japanese police at night with revolvers, but something of the kind would seem necessary to enable them to deal satisfactorily with such desperate men as these armed burglars appear to be.—*Hiogo News.*

Correspondence

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Yokohama United Club,
November 24th, 1877.

SIR.—In your paper of last week you published an accusation against me, and I must ask you to give the same publicity to my reply.

You stated that I had 'industriously circulated rumours' which are 'utterly devoid of foundation' and had made 'entirely unauthorized statements and insinuations' respecting the transfer to myself of the property at present entrusted to your hands —the *Japan Mail*.

The phrases in which you have seen fit to couch your indictment are sufficiently coarse and discourteous to merit a more severe reply than I shall give to them. I content myself with the plea of 'not guilty.'

The facts are these. I arrived here at the end of September, with the intention of proceeding to India in a few weeks. Complaints were immediately made to me, by a number of men of influence and standing, of the manner in which the *Japan Mail* was conducted, and I was urged to start the *Japan Times* against it, sufficient support being promised to ensure the pecuniary success of the new paper. It appeared to me unfair to do this without notice to you; and, as the *two* papers could hardly be expected to live, I deemed it best to attempt negotiation for the purchase of yours. On the 2nd or 3rd of October, therefore, I sent a common friend to you to make offers in this direction. You were on the point of starting on a trip in the country, and I received no decisive reply. I waited for six weeks, during which time I made no special secret of what I had done, and naturally expressed the hope that my offers would be accepted. Some days after your return, finding that you were disinclined to accept my former offers, I proposed another arrangement which appeared to me more advantageous to you than the independent establishment of a rival paper—viz: that you should abandon the *Weekly Mail* in my favour, on condition of my giving you my new paper to print, you retaining your daily paper, etc. This proposition you rejected as 'of so absurd a nature as to admit of no reply'—which of course put an end to all attempts at negotiation between us.

There is nothing here of 'rumour' or 'insinuation.' It is easy enough to conceive how, as in the game of 'Russian scandal,' my expression of a hope that you would consent to a sale of the *Mail* has been distorted, before reaching your ears, into a statement that I had bought it; but you were not justified, on such authority, in writing the paragraph of which I complain, and I am entitled to demand that you should either prove, or withdraw statements so damaging to my character, and to the pecuniary interests of the *Japan Times*.

The other charges in your last week's paragraph I can afford to leave unnoticed, and I remain,

Sir,
Your obedient servant,
CHARLES RICKERBY.

OLIVER B. BRADFORD, the United Stated Vice-Consul General, was this morning further arraigned on an indictment numbering twenty-five counts, for embezzlement, extortion, presenting fraudulent vouchers, and rendering false and fraudulent accounts to the United States Treasury. The accused was brought into Court by the United States Marshal, and stood near the prisoner's dock. His three weeks' imprisonment seemed to have worked a great change in his appearance; and he had a haggard and worn expression. He pleaded technically guilty, but denied all criminal intent. Availing himself of his privilege as a Government officer, he asked that the charges might be referred to the Home Government. This request was granted; as was also a further one to be allowed bail.—*Shanghai Courier.*

The British ship *Black Prince* reports that on the 2nd November two columns of smoke were seen arising from out of the sea near Sulphur Island. It was believed that a marine volcano was in eruption.—*Shanghai Courier.*

Law Reports.

IN H. B. M.'s CONSULAR COURT, KANAGAWA.

Before RUSSELL ROBERTSON, Esq., Consul.

Monday, November 19, 1877.

W. H. Seville, chief officer of the British barque *Pauline*, was charged by Charles McLane with assault and battery.

Chas. McLane, sworn; I am cook on board the *Pauline* On the 16th instant, at 9 a.m, I went to the house on deck to put on a dry shirt. I found two men there at work and the rain beating in, wetting my bed and chest. I spoke to the men, who said they were there by orders. I then spoke to the second mate about it; he said he was ordered to send the men there. I said they had no business there, and that I should speak to the Consul about it. I stamped my foot at him. He went and told the chief officer. The chief officer came and said; "We have had enough of your nonsence, I ordered the men here, and here they shall remain." He told me to get out of that, said I was drunk, and struck me three or four times. I did not strike him back. I only held his hands. The house is our sleeping apartment. There is one berth vacant. The place is intended for four bunks. The second officer, the carpenter, and I occupy it.

William Murray, able seaman of the *Pauline*, sworn: I was sent into the house on the 6th inst. by the second mate. When the steward came, he said it was no place for the men to work, and went and spoke to the second mate. The second mate told us to go on with our work. He then went to the chief officer, and said he would see the Consul about it The chief officer struck him three or four times with his fists in the face. The steward tried to hold his hands. Then the captain came and separated them.

To complainant: Your things were getting wet.

To accused: I heard the complainant use some threats about a knife.

To complainant: That was after you had been struck.

Accused: I admit the assault, but under provocation. The complainant ordered the men out of the house, whereas I had ordered them in. The complainant called me a liar.

Fined $1 and costs.

Tuesday, November 20th, 1877.

Ake Ridderbjelke, who was sworn, and said: I joined the *Naworth* in Antwerp and have been in her until quite lately. I have seen water served out on board in a white glass bottle. The only measure I have seen was in the galley; it was about the capacity of a pint. It was not used for serving out water.

To the Court: The measure I have seen in the galley was a tin measure.

The accused had no questions to put to this witness.

Arthur Bell was sworn, and said: I have been on board the barque *Naworth* since her departure from Antwerp, and I am in her still. On or about the 5th of September I saw water served out on board; it was served out with a common gin-bottle. I have never seen any measure on board. The cook has a tin pot, which he says holds a pint.

Robert Edmond, was sworn, and said: I am able seaman in the *Naworth*, and have been in her since she left Antwerp. I have not been present when water was served out to the crew. I have not seen any standard measure on board.

William Taylor, sworn: I am able seaman in the *Naworth*. I have never seen any standard measure on board for serving out water. I have seen two pints pots in the galley; one of them is called by the cook a half pint, the other a pint. I have seen no stamps on them.

Nadal Dubici, sworn: I am able seaman in the *Naworth*. I think there is a pint measure in the galley.

Robert White, sworn: I have seen water served out by the bucket. The tin pots in the galley have no marks or stamps upon them.

This closed the case for the prosecution.

The accused called as witness

John Frederick Louisda, sworn: I am steward on board the *Naworth*. We have got both weights and measures on board. The measures are a pint measure and a half pint measure.

To Mr Enslie: I know the measures are a pint and half a pint. They are made of tin. I have noticed no marks or stamps upon them. I have been seven months on board as cook and steward. These measures are kept in the galley, and I use them every day.

To the Court: I have not heard the crew complain about short allowance of water.

The accused said: There are two full sets of scales and weights, a pint measure and a half pint measure on board. I have no quart measure

Mr Enslie said that he thought the case made out for the prosecution. In this case there was no question of scales and weights, only of the measure for serving out water. It was proved that water had been served out by a measure that was no legal measure. He would submit that if the two tin vessels kept in the galley were really legal measures, the cook, who had handled them daily during seven months, must be able to give a more accurate description of their peculiar marks than he had here given.

Adjourned until to-morrow at 10 a.m., when the accused will produce the two measures.

Wednesday, November 21, 1877.

George Francis Williams, master of the British barque *Naworth*, was charged with contravening sec. 225 of the Merchants

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Shipping Act, which orders every master to keep proper weights and measures for the purpose of serving out provisions.

The accused denied the charge.

Mr J. J. Enslie, shipping master, appeared for the prosecution.

The hearing of the case had been adjourned yesterday, and the accused ordered to bring with him into Court to-day the two tin measures mentioned by him and his steward as kept in the galley for the ship's use.

The accused appeared half an hour too late, and on the Court asking him for the reason, he said he had business to attend to.

Being asked for the measures, he said he had only brought one, the pint measure, the other he could not find. The measure was then produced.

The accused asked that sec. 225 of the Merchant Shipping Act of 1854 be read before him.

Mr Enslie, for the prosecution, at the direction of the Court, complied with that request.

The accused: The measure I have produced is a proper pint measure, and I have therefore not contravened the Act.

Mr Enslie: The word "proper" in the Act can only mean "legally recognized;" but the measure produced has no mark to show that it is a legally recognised measure.

His Honour said that he could certainly not consider the tin pot now produced in Court as a "proper" measure. He should consider the charge proved, and fine accused $2.00 and costs.

The captain of the *Naworth* was next charged with contravention of sec. 166 of the Merchant Shipping Act of 1855, by not having at the commencement of the voyage to Yokohama, caused a legible copy of the agreement with the crew to be placed in a part of the ship that was accessible to the crew.

The accused denied the charge.

Mr J. J. Enslie, shipping master, appeared for the prosecution, and called as witness

Robert White, who was sworn, and said: I never saw a copy of our agreement posted anywhere in the ship.

To the Court: I was an ordinary seaman in the *Naworth*. I have sailed in other ships, where the copy of the agreement has been posted in the forecastle. I did not make any complaint on my voyage out of the want of the agreement being posted. I complain of it now as of any other thing amiss in the ship, although I am not in the ship any more.

Ake Ridderbjelke, sworn: I was mate in the *Naworth*. I never saw a copy of the agreement with the crew posted anywhere in the ship.

To the Court: I did not complain during the voyage. I knew what answer I would have got if I had complained to the captain.

This was the case for the prosecution.

The accused said: I gave the copy of the agreement to the carpenter, while we were in the dock of Antwerp, for nailing up in the forecastle.

Edward Evans Ralph, sworn: I am carpenter in the *Naworth*. You gave me a paper to nail up in the forecastle on the morning we left the dock in Antwerp. I nailed it up with small tacks. I did not read it.

To Mr Enslie: I an read, but I was in a hurry this morning.

To the Court: I do not know what became of the paper afterwards. I never saw it since. I saw thaf there was something in the paper about provisions.

To accused: I wish to observe that I cannot account for the paper, when one nailed up, being again torn down.

His Houour said that he was willing to credit the evidence produced that the copy of the agreement had been posted, and considering that no complaint of its absence had been made during the voyage, and being averse to countenance malicious prosecution by a issatisfied crew against their captain, he should dismiss the charge, and order the man who brought the charge to bear the costs.

IN H. B. M.'s PROVINCIAL COURT, KANAGAWA.

Before H. S. WILKINSON, Esq., Acting Law Secretary.

Thursday, November 23, 1877.

Thomas Bell was charged by his wife, Cemaris Bell, with assault.

Cemaris Bell, residing at the Temperance Hall, Yokohama, sworn: This morning about half-past nine, my husband entered my room, and asked me what my business was yesterday with Mr Robertson, of the Mitsu Bishi Iron-works. My reply was, that, as I had not seen him (my husband) for a whole week, I was anxious to get information about him, which I hoped to receive from Mr Robertson. He told me that he had a letter from Mr Robertson and expected to come to an arrangement with me. I then asked him what arrangement he intended to make? He invited me to go with him to his lawyer. I refused, and he said he had done with me. I said I had not done with him, that he must see the manager of the Hall, and arrange about my expenses. He said he had no money, what money he had received from the ship he had spent. That was about $28 spent in a week, and I went to the door to prevent him from leaving the room. He struck me a blow in the face, and when I took hold of his coat, he kicked me on the leg. I appeal to the bench for protection and support.

The accused asked for a remand.

ORDER:

Let the accused be remanded until Tuesday, the 27th instant, at 10 o'clock a.m., and let him stand out on entering into his own recognizances in $200 and two sureties in $100 each to appear then, and to keep the peace towards the complainant in the meantime.

IN THE U. S. CONSULAR-GENERAL COURT.

Before H. W. DENISON, Esq., Vice Consul-General;

Messrs. C. H. HASWELL and N. STONE, Assessors.

Monday, November 19, 1877.

John Manning, a sailor from the American barque *Annie W. Weston*, was charged with refusal of duty and disobedience to the officers of the ship.

The prinsoner pleaded not guilty.

John A. Davis, chief officer of the *Annie W. Weston*, was sworn, and said: Since the 6th of October, when the prisoner was brought on board, he has constantly refused to do any work on board the ship. He never gave me any reason for his refusal; he only said he would rather die than do any work. He was confined, but otherwise he has been treated well on board, like the rest of the crew. I asked him, on the 8th of October, if he intended to lie and rot in his irons. The prisoner was brought on board by the police on the 6th of October; on the 8th we went to sea; on the 12th he was let out of irons, and asked if he would turn to work. He said "No." That same night I had to stand at the pump the whole night, while prisoner was sleeping comfortably in my room. We were overtaken by a typhoon, and the ship was in danger, but the prisoner persistently refused to lend a hand. He has refused duty ever since, until we reached Yokohama. Most of the time he has been in irons.

To prisoner: May be it was Friday, the 5th October, you were brought on board. As soon as you were brought on deck, the captain ordered a pair of irons put on you. I did not hear you tell the Captain that the irons were too small for you. Nor did I hear him say that he had paid a lot of money for you, and that he would have it out of your body. I did not see the skin come off your wrist and the blood come out when the irons were snapped on you. You were kept below as a prisoner; you had bread and water for breakfast, but you had good food for your dinner. I do not remember that I abused you when I called on you during the typhoon to give a hand. I did not say that you should never get ashore. I told you to go the weather side of the booby-hatch and hold on as best you could. I did not see Captain Winsor hit you at that time. I went below, and brought up a bottle of gin to give to the men. When it was empty I took another bottle out from my bosom and handed it to the men. I did not give an extra drink to two of the men. I gave no man two glasses. I had let you out of irons a few minutes after you came on deck. I did not go below to load my revolver to threaten you with it if you would not work with the rest, I only told you to sit down on the booby-hatch. Only afterwards you told me that you were sick, and then I did not ask you any more to work. I did not call you out of your name, nor did I abuse your mother. When the second mate called on you to give a hand, you did not say that you were sick, you said that you die first. It is very likely that the second mate told you that you were able to eat your food. I never saw the second mate hammer you in the face with his fists. I did not see Captain Winsor jump down from the poop and commence pounding you. I did not hit you in the face myself. I did not pick up a capstan bar and threaten to kill you with it. I did not tell Captain Winsor that I wanted to stitch up a cut you had got in the face. I saw sticking-plaster on your face, but I don't know whether Captain Winsor put it there. The morning when I took you out of the lazarette, the foretop sail had already blown away; the vessel had only reefed foresail, lower main top sail, and reefed spanker. The pumps were all in order. The upper main top sail was not set that night.

Captain Winsor objected to these questions as purposeless.

The prisoner stated that his object was to show that the vessel was not properly handled, and that there was no danger of the ship sinking, but that the cargo's shifting was due to mismanagement on the part of the officers.

His Honour observed that the vessel being in danger or not had nothing to do with the charge, and prisoner's questions with regard to the management of the ship had therefore no bearing on the case.

Witness, to Court: When prisoner was taken on board on the 5th October, he refused to work, without giving any reason. He did not then excuse himself on account of sickness, nor did he appear to be sick.

Adjourned until 1.30 p.m.

Captain Winsor, master of the *Annie W. Weston*, sworn: About the 10th August, 1876, in Cardiff, while I was in a shipping office, the prisoner came in; he said he was from Springfield, Massachusetts, and wanted a ship. I told him I would give him a chance to Yokohama. I bought clothes for him and shipped him. He always had more or less trouble with the rest of the crew. I have had no trouble with the prisoner to give him cause for disobeying my orders. On a Monday in last May I gave all my men liberty, the prisoner was one of them. I told them to be on board at 6 o'clock next morning; the prisoner did not make his appearance until Thursday afternoon. He came on board with two black eyes and a terribly beaten face. Two days after that I had to sail for Hakodate; I cleared at the Consulate, and went to sea next morning at daylight. At that moment the prisoner came up to me and said he would like to go to the hospital. I sent him ashore and went to Hakodate. I returned to this port on the 10th July. On the 12th he was ordered on board by General Van Buren. He did not go, and the next day I went ashore and had him arrested. He refused duty on board. I complained of him, and he was sentenced to ten days on bread and water. On the 5th or 6th of October he was brought on board. Two days after he was put on board, that is to say, Sunday, I went on board the *Tennessee* to change the irons, and when I returned, I told the mate to put other irons on him. Next morning I sailed on another voyage. The prisoner had bread and water for his breakfast and two good meals, dinner and supper. On the 10th October he had a call to go forward; I was on the main deck. I asked him

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

why he did not go to work and what he expected to gain by his mulish conduct? He said he did not expect to gain anything, he had been driven to this. I asked him: "How driven; because you were in jail for three months?" He said, "No, the Consul had driven him." I said it was a pity he had not got the cholera as well as the two men, who were then dying. He said, he did not care how many died; he would not do a hand's work. Next morning the typhoon burst upon us. The ship was thrown on her beam ends. The forecastle, the cabin, and the store room were gutted with water. I give orders to cut away the lee foretop sail sheet, and let the foretop sail blow to pieces in order to right the ship. The pumps showed four feet of water in the hold.

In reply to the Court, asking what was the object of this statement of the measures taken with regard to the ship, witness said he wanted to show the ship was in danger.

Examination continued: I asked prisoner whether he would not help at the pumps, in order to save the ship, the cargo, and our lives, but he refused. At the time, when I ordered whiskey to be served out to the men, I also gave prisoner a dram. During the night I put him down in a room to save his life. I gave him hot coffee and his food as the rest of the crew. While I was down below putting on a dry shirt, I heard some loud talking on deck, and when I came on deck, I found it was prisoner talking to the chief officer. I hit the prisoner three times, and thought myself justified in punishing the man. I at that time thought it an impossibility to keep the vessel afloat; every soul had been at the pumps the whole night, and the men had got so exhausted that they could scarcely work, getting neither proper food nor rest, and this man still persisted in refusing to give us assistance. He held out so until we arrived at Yokohama. When he went over the side last Saturday, the men said to him: "You dirty, big Irish loafer, we hope you will never come back again." I have treated him more like a passenger than a prisoner. When he was brodght on board the ship by the deputy-marshal, I asked him whether he would work. He said "No." I said, "All right," and went below for a pair of irons. I told the marshal I thought mine too small, and asked him if he would change his against mine. He refused, and I had to put on mine, which were a little small. Next day I changed them.

Dr Tripler, sworn: I am medical attendant to the *Annie W. Weston* while in port. When she arrived here the last time I was sent for by Captain Winsor, and asked to assume the medical attendance on his crew. On the following day I saw the prisoner. His face was somewhat bruised, particularly about the eyes. I examined the wrists, and found the skin excoriated as if the handcuffs had been hurting him. He complained of no pain; he said that he felt well, and had been properly treated by the officers of the ship. I saw him again after the lapse of some days, and he said that he was well treated and his food of sufficient quantity. About a fortnight ago I called him aft and had a longer conversation with him. I tried to persuade him to do his duty, but he replied that nothing should induce him to work again on board that vessel. He refused now to submit to a thorough examination of the state of his health or to take medicine, and added there was only one thing he wanted, and that was his discharge. Since that I have seen him five or six times, and he has never complained of any disability.

To prisoner: I saw you the first time on the day when the ship arrived in port, the 20th October.

The prisoner now entered into a long and rambling statement about this witness having pretended to be his friend and thereby got at his feelings, and now having turned out to be his enemy which the Court stopped.

The prisoner said, as Captain Winsor had commenced his statement with the date when he shipped prisoner in Cardiff, so he should cross-examine the captain from that date.

Captain Winsor, in reply to prisoner: I may have told you in Cardiff that I would let you have clothes cheaper than you could get them in the shops. I did not see you sign the articles. On the 16th May last, when I was ready to sail, and you wanted to go to the hospital, I told you that you could go or stay, as you liked. When you asked me for money, I told you I would not trust you with money. When I came back from Hakodate on the 10th July, I never offered you wages.

The prisoner persisting in asking irrelevant questions and the Court refusing to put them, he declared that it was of no use for him to continue his questions, and sat down.

The case was adjourned until Wednesday, the 21st instant, at 10 a. m.

John Manning, a sailor from the American barque *Annie W. Weston*, was charged with refusal of duty and disobedience to the officers of the ship.

The prisoner pleaded not guilty.

The case had been adjourned from the 12th inst.

N. Center, second mate of the *Annie W. Weston*, was sworn, and said: When the prisoner was brought on board, the captain asked him if he would turn to. He refused without giving any reason. The captain then ordered a pair of irons on him, and that he should be taken below.

The witness corroborated the statements made by Captain Winsor and the chief mate with regard to the prisoner's obstinate refusal of duty. He said that during the typhoon, when the vessel was short of hands on account of two of the men being sick, and the remaining crew were exhausted from their uninterrupted work at the pumps, while the water was gaining upon them, the prisoner obstinately refused to lend a hand. The consequence was that, when the captain gave orders to have the boats ready so that they might leave the ship at the last moment, the crew said that they would not give the prisoner a seat it the boats.

To Captain Winsor: Peter Summers, the oldest seaman on board the ship, told me that he would not take his chances to go through that typhoon again for the best $1,000 ever coined, and that we should thank our stars that we got out of it with our lives safe.

To the prisoner: The typhoon commenced on the 10th October, it was at its height on the morning of the 11th. At that time we had a lower fore and main-top sail, the lee clew of the fore sail and a reefed spanker; the lower fore top sail sheets were afterwards cut away, and the sail allowed to blow away in order to right the ship, if possible. The ship was on her port tack. The fore top sail was allowed to blow away before we wore ship.

To the Court: I think the ship was in every way properly handled during the typhoon.

To the prisoner: I refuse to answer your question, how long I have been to sea.

The prisoner said he wanted to call the ship's crew in evidence that he had been improperly treated on board.

Case adjourned until to-morrow at 10 a.m.

John McLane was brought up on a charge of being drunk and incapable.

The prisoner pleaded guilty.

His Honour observed that in consequence of the prisoner's often repeated offences of this kind, he should now order him to pay a fine of $3.00, or, in default, to be imprisoned during six days.

IN THE IMPERIAL GERMAN CONSULAR COURT.

Before E. ZAPPE, Esq., Consul.

L. P. MOORE *vs.* BUSCH, SCHRAUB & Co.

Tuesday, November 13, 1877.

Mr E. Schraub, of the firm of the defendants, appeared in Court, and declared himself ready to take the oath, alternatively deferred to him by the Judgment rendered in this Court on the 22nd September last, and to swear that it was understood between himself and plaintiff that the latter should take back the invoice of goods, to the value of $645.30, ordered by him from San Francisco, and now in defendant's possession, if not disposed of to the German man-of-war in port.

Mr H. Andersen was present on behalf of the plaintiff. The oath was accordingly taken.

MAKING ENDS MEET IN THE PAST.

(The Examiner.)

Without taking upon ourselves to dispute the general truth of Mr. Tennyson's dictum, that

"A sorrow's crown of sorrow is remembering happier things,"

we venture to hope that such of our readers as groan under the difficulty of making both ends meet now may derive a melancholy entertainment from being reminded with what comparative ease the feat was accomplished a hundred years ago. In this hope we are encouraged by the reflection that in grumbling there is a certain bitter sweetness, always more or less toothsome—at least to Englishmen. And there is certainly nothing better calculated to produce grumbling than the recollection that things were not always so bad as they now are.

With this view, then, we have taken the liberty to cull, from the notes of an edition of Boswell's 'Life of Johnson,' published in the year 1807, and before that immortal classic had been mauled by Lord Macaulay's *bête noire*, Mr. Croker, some particulars of the mode of life of a Mr. Peregrine Langton, who died in the year 1766, and was the uncle of Johnson's friend, Bennet Langton. Mr. Peregrine Langton is perhaps a scarcely fair example to choose, for even by his cotemporaries he was regarded as no ordinary economist. He lived "in plenty and elegance upon an income which to many would have appeared indigent and to most scanty," even in those days, when of course money was relatively far more valuable than it is now. But though Mr Peregrine Langton was unquestionably an adept in the art of making both ends meet, there is no room to doubt that his cotemporaries could have done what he did, if they had chosen to take the pains. As an instance, then, of what could be done on a small income little more than a hundred years ago, his example is worth citing. Mr Langton's entire income consisted of a life annuity of 200*l.* per annum, and a yearly sum of 18*l.*, which was paid him for board and lodging by his sister, who, with her daughter, resided in his house. He lived in Lincolnshire, "a country which was not more than moderately cheap," and he paid for his house and two or three small fields which lay round it a rent of 28*l.* From these fields he derived no "further assistance towards his housekeeping than grass for his horses (not hay, for that I know he bought) and for two cows." Indeed, says his nephew, "I have reason to think he lost by them." We take him, then, with an income of 218*l.*, minus 28*l.* which he paid for a house and three fields which were rather a source of loss than of profit to him. Upon this income of something less than 190*l.* he maintained in "plenty and elegance" himself and his sister and niece, and in plenty, if not in elegance, two maidservants, and a couple of men in livery, to whom he would often make "presents above their wages;" and "it is remarkable," says his nephew, "that he would permit their relations to visit them, and stay at his house two or three days at a time." Nevertheless though thus indulgent to those whom he employed, he did not think it necessary, nor apparently was it, to stint himself in anything. "His common way of living, at his table, was three or four dishes; the appurtenances to his table were neat and handsome;" (and, wonders of wonders) "he frequently entertained company at dinner, and then his table was as well served with as many

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

dishes as were usual at the tables of the other gentlemen in the neighbourhood. His own appearance as to clothes was genteel, neat, and plain. He had always a post-chaise, and kept three horses." The amount of beer which he allowed for his household of seven persons was a hogshead a month; and on the servants complaining that it was not enough, he had "the quantity of a hogshead put into bottles, and distributed it out every day, eight quarts, which is the quantity each day at one hogshead a month; and he told his servants that if that was not enough they should have more; but "by this method it appeared at once that the allowance was much more than sufficient for his small family." Whether any additional drink besides the eight quarts was allowed on the occasions when his servants' relations used to visit them, and stay in his house for two or three days, we are not informed, but no doubt there was. It is only what we should expect from an economist so liberal.

But though he did not, as we have seen, "practise any extraordinary degree of parsimony," he managed always to have "a sum of money lying by him for any extraordinary expenses that might arise." Some he "put into the Stocks," some he spent in the purchase of his "household furniture and his linen, of which latter he had a very ample store," and, says his nephew, "as I am assured by those who had very good means of knowing, not less than the tenth part of his income was set apart for charity." At his death he left in the Stocks a sum of 150*l.*, and in his house was found also a sum of 25*l.*, with directions that it should be expended in charity. How happy would many of us be nowadays if, on an income of 218*l.*, we could have a house in the country with a few fields, keep in "plenty and elegance" a sister and a niece, two maids and two men-servants, three horses and two cows, entertain frequently company at dinner, and leave 150*l.* to sorrowing relatives and 25*l.* to the poor!

Dr. Johnson rightly considered Mr Peregrine Langton as a marvel of an economist. And yet Johnson himself, at an earlier period of his life, had been pretty successful in the art of making a little money go a very long way. Speaking of the time when he first came up to London, in the year 1737, and lodged at the house of "Mr Norris, a staymaker, in Exeter Street, adjoining Catherine Street, Strand," he says: I dined very well for eightpence, with very good company, at the 'Pine Apple, in New Street, just by. Several of them had travelled. They expected to meet every day; but did not know one another's names. It used to cost the rest a shilling, for they drank wine; but I had a cut of meat for sixpence, and bread for a penny, and gave the waiter a penny; so I was well served—nay, better than the rest, for theygave the waiter nothing." What sort of wine "the rest" drank,and how much they got for fivepence—because we suppose they must have had a pennyworth ofbread with their meat—the "sage," we regret to say, does not inform us; but we should imagine it must have been "wine from the wood," and with a strong flavour thereof.

Johnson's Offellus in the "Art of Living in London' was an Irish painter whose name unfortunately has not survived, but who, if only one swallow were acknowledged to make a summer, would by his mode of life have cleared his race of imputation of extravagance under which they labour, and lifted them in the estimation of the world to a pinnacle of parsimony even higher than that occupied by the economical Scotch. This gentleman, speaking after long experience of life in London, declared that 'thirty pounds a-year was enough to enable a man to live without being contemptible." He allowed 10*l.* a year for clothes and "linen"—the paper collar had not then been invented. "He said a man might live in a garret at eighteenpence a week; few people would inquire where he lodged, and if they did, it was very easy to say, 'Sir I am to be found at such a place.' By spending threepence in a coffee-house, he might be for some hours every day in very good company." For dinner he allowed sixpence, as amply sufficient. Breakfast—of bread and milk—would cost a penny; and supper was disposed of by the simple expedient of going without it. "On *clean shirt day* he went abroad and paid visits." Johnson says of this frugal friend, whose mode of life he did not like to hear ridiculed, "He was a very sensible man, who perfectly understood common affairs; a man of great knowledge of the world, fresh from life, not strained through books." Boswell, writing between thirty and forty years afterwards, says:—"Double the money might now with difficulty be sufficient" to enable a man to live in the way in which this Irishman lived. How much more would be required now, may be to some extent estimated by an examination of one item of his expense—his penny breakfast of bread and milk only, he would require, if he were a healthy man with fair appetite, at least a pint of milk, which would now cost him threepence, and at the least as much bread as would now cost him twopence. He would therefore pay for his modest refection nearly as much as Johnson used to pay for his cut of meat. Fortunately, other things have not risen in price in the same proportion, as otherwise an income of 240*l.* a year would be required to enable a man to lead the straitened life which this Irish painter, "without being contemptible," managed to lead on 30*l.* But we know that this is not so, and the reason is that with the exception of food, and perhaps house rent, the cost of every other necessary of life is *relatively* far less than it used to be. But even on 240*l.* a man nowadays might find it hard to enjoy the privilege which this person was able to obtain for threepence—of being for "some hours every day in very good company." The coffee-house of our ancestors unhappily is extinct in this country; and although we see it still flourishing at the other side of the Channel, we do not seem to be able to do with it as we have done with other things that had at one time become extinct amongst us—the capercailzie, for example, and the so called "Scotch fir"—reintroduce and acclimatise it amongst us.

So that, all things considered, perhaps this Irish painter, who, in the early part of the last century, got on, in his own estimation, so well on 30*l.* a year, is still to be envied, as most certainly is Mr. Peregine Langton, who, thirty years later, lived in "plenty and elegance' on 218*l.*, with his sister and niece, and his four servants. At any rate, we hope that the particulars of their lives, which we have ventured to quote, may prove entertaining to the members of a generation to whom the struggle for existence is every day becoming more severe, and many of whom are inclined at times of despondency to fancy that, in spite of Australian meat and the promised aid from American stock-breeders, it will not be possible to make both ends meet much longer.

REUTERS' TELEGRAM.

Intelligence from the Seat of War.

London, November 21st, 1877.

Despatches report that the Russian forces having summoned the garrison of Erzeroum to surrender, the Sultan of Turkey has ordered the garrison to resist to the last.

Suleiman Pasha has resumed the offensive at Kara, Lom.

Despatches estimate the Russian loss at Kars at 2,500 men.

England.

Inspectors Druscovich, Palmer, and Meiklejohn have been sentenced to two years imprisonment with hard labour, and Inspector Clarke has been acquitted.

London, 19th November, 1877.

The Russians captured seven thousand prisoners at the taking of Kars, which city General Melikoff entered yesterday morning.

The Russian troops attacked the Turkish position at Orchanie but were defeated with very heavy loss.

London, November 18th, 1877.

France.

The French Ministry having tendered their resignation which has been accepted. The Moderate Constitutionalists have been summoned by the President to form a new Ministry.

According to a Russian Official Despatch, the Turks on the night of the 15th November unsuccessfully attacked three times the position of General Skobeloff.

Despatches report that Ahmed Mukhtar Pasha has received reinforcements and repulsed the Russian attack on Kars.

According to a Russian official despatch, after severe fighting (from 8. p.m. of the evening of 17th November to 8 a.m. of the morning of 18th November), Kars was carried by assault.

London, November 17th, 1877.

Despatches report that the Russian forces captured Azizie, but were afterwards expelled therefrom.

War between Turkey and Servia is regarded as imminent.

London, 9th November, 1877.

The Senate and Chamber of Deputies re-opened quietly.

M. Jules Grevy has been elected president of the Chamber of Deputies.

Ahmed Mukhtar Pacha announces that the Russians attacked his position at Deveboyun on the 5th November, and that the Turks retreated to Erzeroum.

General Scobeloff on the 5th November cannonaded the Southern positions at Plevna.

London, (?) November.

Chefket Pasha was defeated in an attempt to relieve Rediff Pasha.

According to a Russian official despatch the Russians occupied Tetewan and Lukowitza.

The Russian advanced guard has arrived within 12 miles of Erzeroum.

A large Russian force occupies Hassankale.

Rumours of foreign mediation are authoritatively denied.

Rediff Pacha is strongly reinforced.

The President of the German Parliament in reply to a question said, that the prohibition of the export of horses cannot be repealed whilst mobilization of the army is a possible contingent.

ENIGMA.

I'm a very great traveller by land and by sea
And soldiers and sailors are partial to me; (1)
When the bells are all ringing I make a display, (2)
And in gorgeous processions I'm brilliant and gay. (3)
I'm so small that an infant can bear me along; (4)
So large that I call for the aid of the strong. (5)
I am cheered as I pass through the crowds in the street (6)
Yet those very crowds tread me under their feet. (7)
In street, alley, and court—in palace and cot,
Pray where is the city in which I am not? (8)
I live in the water, I flourish on land, (9)
I am poor, I am rich, I am mean, and I'm grand. (10)
I am sometimes bedizened with leaflets of green,
And by soft murmuring rivulets often am seen. (11)
The wretch on my bosom is fain to repose, (12)
But, ungrateful, the workman repays me with blows. (13)
I am hard (14), I am soft (15), I'm the emblem of fame; (16)
Though to feeble dejection I, too, lend my name! (17)

Kerosene Oil.—Fair sales have been made during the week, and the market closes firm at $4.50 per case.

EXPORTS.

Silk.—A very large business has again to be reported. The demand for Hanks has been especially good, and at the close there is an advance of 10 to 20 dollars on last quotations. Prices of Hamatski are somewhat higher, but other Oshius remain about the same as before. A good deal has been done in Filatures, rates for which have considerably advanced. The great feature during the week has been the continued holding off from operations of nearly all English buyers.

Settlements are 1,425 bales of Hanks, 500 bales of Oshius, and 150 bales of Filatures, making a total of 2,075 bales. Arrivals amount to 1,000 bales; and stocks are 1,800 bales. The total export since 1st of July is 11,414 bales, against 16,378 bales for same period last year.

		In London at 4s. 0½d. per lb.	*In Lyons at f. 5.10 per kilo.*
Hanks,—Superior	$600 to 620	21/8 to 22/4	60.00 to 62.00

MISCELLANEOUS.

W. & C. SCOTT & SON.

FIRST PRIZE MEDAL and DIPLOMA OF HONOUR awarded, CENTENNIAL EXHIBITION, Philadelphia, 1876. For excellence of Materials and Workmanship in their PREMIER QUALITY and medium grades. Their New PATENT TRIPLEX action and COMPENSATING LUMP.

CHOKE BORES ON GAME.

WE have received numerous letters testifying to the excellence of our Guns. The following are a few extracts.

The W. & C. SCOTT & SON No. 10 choke bore "is all its name implies." I have killed stone dead grouse flying at 92 yards, and at 50 and 60 yards it will kill every time. At duck shooting it is perfection.
Brainherd, Minnesota. T. P. C.

I have just returned from North Carolina (Currituck Sound). I cannot say too much in praise of my choke bore. I have killed ducks at 60 yards, dropping dead out of the bunches at that distance. I consider I have an extraordinary gun, and deem it my duty to speak in the highest praise of guns of your manufacture. Wishing you all the success you deserve.
Red Bank, N.J., 1877. G. A. W.

From Captain BOGARDUS, Champion Shot of the World.—The Breech-loader you furnished me with is the best *proportioned* and most *effective* gun I ever owned or used. Its shooting is perfect, and I have won every contest since receiving it including my late English matches. I fully recommend the Scott as the gun.

I have carried guns of your make from Nova Scotia to Florida, and from the Adirondacks to the Pacific, and find them all I could wish for.
Cazenova, N.Y. L. W. L.

The guns for myself and friends have safely arrived. I have now great pleasure in acquainting you that I am extremely glad in possessing them. I have tried them and they give me great satisfaction. My friends are also very pleased too.
Yedo, Japan, March, 1876. V. E. B.

I have just received the Two fine guns ordered for me by Mr. B. F. Stevens, London, and desire to express my entire satisfaction of them. Such fine weapons which while they do credit to a reputation already so well known as to need no establishing, deserve from me some expression of my appreciation of the manner you carried out my wishes. A more substantial evidence of my estimation of the gun is to be seen in the fact that I have this day directed Mr. Stevens to order another for me.
G. R. W.
Paymaster U. S. Navy.
United States Flag Ship *Omaha*.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

MARRIAGE.

On the 21st November, at St. John's Cathedral, Hongkong, by the Revd. John Henderson, Garrison Chaplain of Hongkong, EDWARD DIGBY MURRAY, of Yokohama, to NELLIE, youngest daughter of Robt. Chapman Esq., of old Charlton, Kent.

DEATH.

At Henzada, British Burmah, on 27th August, of typhoid fever, aged 24 years, DUNCAN FERGUSON, B. A. Oxon, Bengal Civil Service, eldest son of the late Duncan Ferguson, Buchanan Street, Glasgow.

Notes of the Week.

The *Nichi Nichi Shimbun* contains a brief account of the ceremonies attending the closing of the National Exhibition at Uyéno, yesterday. By half past three the Commissioners of the exhibition, the *Daijin* and *Sangi* and the officials of the various Government Departments were assembled in readiness to receive Their Majesties the Emperor and Empress, who arrived at the building at 4 o'clock. Descending from their carriages they walked to the place set apart for them. The Mikado there made the following speech, "The time for the closing of the Exhibition having arrived, I have come to perform the final ceremony, and I am most happy to know that it is through the industry of my subjects and the energy of the officials that the Exhibition has been so successfully carried out." An address was then presented by the Minister for Home Affairs, and this was followed by another from the Governor of Tôkiô *Fu*, who represented the whole of the *Fu* and *Ken*. At the sound of a whistle blown in the Machinery Hall, bells were simultaneously rung in all the buildings, and the different courts and halls were immediately closed. The Emperor then dined in the a room set apart for the occasion, the members of the Imperial family, *Daijin* and *Sangi* dining together in an adjoining apartment. At twenty minutes past six the Emperor left the buildings, and just as the carriages drove off the fireworks commenced in the Shinobadzu-no-Ike. The Royal carriages were stopped for a short time in order to allow Their Majesties to view a portion of the display. Large numbers of people thronged the park at Uyéno.

His Excellency M. de Struvé, the Russian Minister, accompanied by his family, will leave by the French mail on Tuesday next for Europe. Mr. de Struvé's leave of absence is for four months, not including the time occupied in going and returning.

Charles Lamb has said that while we only think it necessary to say grace at dinner there are twenty other occasions every day when we ought to acknowledge the blessings set before us. Surely if it be meet and proper so to do when our physical wants are concerned, we are not the less called upon to express our thankfulness when mental nourishment is placed before us; such nourishment, for example, as the works of the great musical composers, fittingly interpreted, afford to minds harassed by the petty cares of every day life. Now in view of the difficulties under which this community labours with regard to any efficient rendering of music worthy of the name, we ought to be thankful for small mercies, and be in no way chary in the expression of our gratitude to those who do their best to provide, no matter in how small a degree, for our musical entertainment and instruction. The author referred to above further remarks, "A short form upon these occasions is felt to want reverence; a long one I am afraid cannot escape the charge of impertinence." We are desirous of falling into neither of these errors, but thankful as we for the efforts made to place before us music that shall elevate while it delights, we cannot escape the task imposed upon us of making certain critical remarks on such a programme as that presented at Mr. Wagner's concert on Wednesday evening. We trust, therefore, that they may be accepted as prompted, not so much by dissatisfaction at what was performed, as by regret that so much was attempted. In the first place, let us glance at the programme. Fourteen pieces, including three entire Beethoven sonatas, two entire trios by Hummel, with every 'repeat' religiously repeated, an overture by Weber and one by Beethoven, to say nothing of songs and minor pieces. True there was nothing trivial from beginning to end. No piece that did not bear the name of some distinguished composer, and which called for the highest art to give it fitting interpretation. But what a programme to place before an audience that has so little chance to become familiar with works of which true enjoyment and appreciation can only come by long study and familiarity. The frequenters of Monday Populars would have been aghast at such a programme, while a Conservatoire audience would have yawned and retired. Concerts "seldom come" here, and therefore "they wished for come," but in order to make them enjoyable the selection must be judicious and adapted to the capacities of the audience. There is no need to fall back on music hall songs, Offenbachian trivialities or ballads of the wishy-washy Claribel school. By all means let us have good wholesome fare. The gentlemen who so kindly came forward last night are quite capable of playing a simple movement of a sonata or a trio with accuracy and taste, and of thereby giving

Digitized by Google
UNIVERSITY OF CALIFORNIA

keen pleasure to their hearers. But they must not blame their audience if by too ambitious a selection and the extravagant length of the programme, their efforts did not receive the acknowledgment which certain portions of their performance undoubtedly merited, but which utter weariness prevented their listeners from properly appreciating. Moreover, some of the morceaux required the genius of a Hallé and a Joachim to render intelligible and interesting, and it is therefore nothing to the discredit of the gentlemen who undertook the arduous task of interpreting such works that they failed to make them so. It is not to be supposed that works written by the greatest masters, for performance by artists of exceptional genius, before critics who can rightly estimate their wondrous depth of meaning, can be otherwise than tiresome when performed by gentlemen who play the piano or other instruments as a relaxation after the business of the day is over, before an audience of not more than average musical taste. Such noble aspirations are all very well, but they should be kept in the back drawing room, and only indulged in before a select circle of musical dilettanti. It is related that when Beethoven had written his wonderful Fidelio, he refused to permit it to be performed until some fitting representative of the heroine could be found. "I cannot find the Leonora I desire," said the master to his friends who were importuning him to have his opera placed on the stage. "It is true there are many singers, but none for me. My Leonora must not trill and break her throat with roulades; she need not change her constume ten times, nor be remarkably beautiful, but she must have *one* thing beside her voice." And this one thing so rarely present is required for the fitting interpretation of any one of his works. We are not playing Beethoven, if we play correctly every note that we see in the score before us, any more than we are acting Hamlet or Macbeth if we stand up and repeat every word of the text. The soul must be there to sympathize with and enter deeply into the heart of the master. He must be approached humbly, reverently, lovingly, and when to this spiritual appreciation of the hidden meaning of the composer is added that brilliancy of execution and delicacy of finish, which can only be acquired by long years of unceasing study, we may venture to interpret Beethoven, but not until then. We are prompted to make these remarks more with regard to the future than by any wish to find fault what was attempted on Wednesday evening, and have ventured thus to write in order that the performers who so generously came forward, may hereafter be spared that disappointment which comes of a justly wearied audience. We trust they may be accepted in the spirit in which they are written, and that the really excellent musical talent that was displayed may be turned to frequent good account in providing the community with that too rare pleasure, musical entertainment. On Mr. Griffin's shoulders the whole weight of the concert fell, and indeed he had no light task to perform. In the two trios by Hummel especially, he played the piano forte part with fine execution and true musical feeling. Had he been less heavily burdened his performance would have shown to far greater advantage in certain of the other selections. But the fingers of a Von Bulow would have tired under the amount of work Mr. Griffin imposed upon himself. Fortunately the two overtures were omitted, and owing to the lateness of the hour a song by Mr. Andersen was also cut out. The one song sung by this gentleman is a fine specimen of German song writing, and was well suited to the solid qualities of Mr. Andersen's voice. While Mr. Wagner is a very fair violinist, he is an admirable flautist, and his performance of the flute solo was, in point of execution and artistic excellence, the gem of the evening. The well known trio "Winds gently whisper" was sung with greater smoothness than generally characterizes attempts at part singing among us; the voices being well balanced and blending sweetly together, although power was occasionally wanting. Blumenthal's song "Love, the Pilgrim" was sung by a gentleman to whom nature has given a voice of exceptional beauty, into which—if he will pardon the remark—he irritatingly refuses to put the glow and colour of life. Like Orpheus he could have made his audience "bow themselves when he did sing." As it was they only encored him. The most interesting concerted piece of the evening was Hummel's trio in F. Monsieur Dassonville is an amateur violincellist of exceptional excellence, and displayed qualities of playing such as are rarely heard outside professional circles. Unfortunately from the lateness of the hour, midnight, the greater part of the audience had left when this, which stood last on the programme was given, and thus lost what would certainly have been enthusiastically received had it been played earlier in the evening.

At the present time, when the Revision of the Tariff is one of the subjects on which the greatest amount of attention is being bestowed by the Government and press of this country, it is well to bring to the notice of those of our Japanese readers who are halting between the teachings of free trade and protection, certain facts and figures which may aid them in deciding which is likely to prove the more advantageous to the welfare of the country. The following remarks are from the last number of the *Economist*:—

OUR FOREIGN FOOD SUPPLIES.—That we annually import immense quantities of articles of food everybody knows, but it is probable that few realise to what an enormous and increasing extent we are dependent upon foreign countries for what may called the means of subsistence. The statistics regarding our food supplies, which Mr. Caird submitted to the Social Science Congress on Tuesday last, may, therefore, be studied with interest and profit. Of wheat, which is the great staple of food, we consume on an average about 28 million quarters a year, and while previous to 1860 our foreign imports amounted on an average to only 4,500,000 quarters, they have increased during the past five year to 12,400,000 quarters. In the twenty years immediately preceding the repael of the corn laws the average price per quarter was 59s 8d, but since we have been able to import freely what we required, the average price has dropped to 51s 4d per quarter. With the reduction in price there has been considerable increase in the average consumption per head of the population. In the eight years from 1852 to 1860, it has been calculated that each individual consumed on an average 311 lbs of wheat per annum, and that in the succeeding eight years the consumption increased to 335 lbs per head. Another effect of the lower prices has been to restrict the cultivation of wheat in this country. Other crops are now more profitable to the farm, and the breadth of wheat land is now one-fifth less than it was 20 years ago. In case of necessity, as Mr. Caird points out, this land would of course be again available, and much of the land now in pasture could be brought into cultivation. But of such a necessity there need be no fear. Our supplies are now derived from all quarters of the globe, and they are thus very constant, since dearth in one country is always balanced by abundance in another; while the contingency of all the sources of supply being simultaneously closed up by war is infinitely remote. As it is, we pay to foreign countries on an average fully 50,000,000*l* a year for wheat alone; *but as we buy from them cheaper than we can produce ourselves, the larger benefit from this expenditure remains with us.* This year, owing to the great rise in prices, our year's bread will cost us about 23,000,000*l* more than it did, on an average, during the past two years; and this of course, has an important bearing upon the trade prospects of the country, since to that extent the surplus income available for the purchase of other commodities will be reduced. Passing from wheat, we find that our imports of Indian corn, which in 1857 amounted to only 125,000 tons, increased last year to 1,300,000 tons, while the imports of potatoes have risen from 43,000 tons in 1871 to 300,000 tons last year. Of meat and dairy produce the home supply has augmented very slightly, but the foreign imports have increased fourfold in quantity, and last year reached the value of 35,000,000*l*. It is very significant, however, to notice that the value, instead of increasing 300 per cent., like the quantity, has risen only 50 per cent., and the immense saving which we have thus effected by placing other countries under contribution for the supply of our wants shows how beneficial to all concerned is a well-regulated commerce.

The italics in the above paragraph are our own. Now does not the same argument hold good of Japan? What then becomes of such reasoning as appeared in an article in the *Nichi Nichi Shimbun* of the 19th November, that it would be better for the Government to pay twelve hundred thousand *yen* to a native manufacturer, than to purchase the same articles for a million from a foreign source?

We have no wish, however, to bring forward again the oft repeated arguments. We will confine ourselves to showing the workings of both theories as they actually appear. The following article is from the *Examiner* relative to the condition of affairs in the United States, where commerce is ruled by the heavy hand of protection. We invite our Japanese friends to carefully contrast the two pictures.

America is now, and has been for several years back, an economical paradox. There are all the undeveloped resources from which wealth is wont to be drawn; and yet poverty is rife, and every variety of trade languishes. The country is young in every sense of the word; and yet it is afflicted with the maladies of old communities. Labour is scarce, as judged by an European standard of plenty; and yet wages are low, and, as Mr. Plunket, secretary to our Embassy at Washington, points out, the emigration from Europe has considerably declined, and a steady increase is perceptible in the return emigration. Peace brought no recovery of industry. On the contrary, the American workman, who now earns nominally one half of what he earned in 1866, and whose actual earnings have probably declined a quarter, dates the beginning of hard times from the close of the war. The railways, though practically monopolists, able to make their own terms with freighters, pay less

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

wages than they did and, as their published rates for goods show, they are not able to do more. As to trade in general, Mr Wells' account of it—"our whole trade is paralysed"—is borne out by too large a mass of concurrent testimony to be in the main disputed. We have known instances of particular branches of business—the trade in soda ash, for example—completely disappearing. Since the war terminated, Englishmen who have had the misfortune to be the owners of shares in American railways have seen with perplexity their dividends dwindle away, and in some instances under circumstances in which it was impossible to suppose that the fault rested with bad or dishonest management. Foreigners who four or five years ago went to the States to push their fortunes, write home that they have been cruelly deceived. "It is not as it once was; in Chicago and St. Louis there are two seeking employment for every one place vacant; we are living in an apparently used-up country." Such is the strain of the common reports touching the condition of things in the States. Some Americans may console themselves by the fact that the balance of trade is always in their favour; but the majority are not so lost to common sense as to persuade themselves that the small dimensions of their import trade, which this implies, is a benefit, or that languishing internal trade can be revivified by the importation of the precious metals. To be sure, late reports indicated some improvement. For four successive months the imports have been increasing; but what is this solitary fact in face of the increase in the number of bankruptcies, the failure of some two millions of men to procure employment, the decline in the consumption of the luxuries of the poor—coffee, tea, and sugar—and the fact that, to quote the words of a well-informed writer, "for the first time in the history of the United States a permanent pauper class is beginning to cause uneasiness."

We are sorry to find the Second Annual Report of the Tsukiji Mission Hospital disfigured by a diatribe against the Press Notification of February 1876, hardly more deficient in logic than in good taste. The necessity or propriety of that notification has been sufficiently discussed, and we have no intention of reopening a closed question. But to talk of legislation in a panic is an absurdity, and the reference to H. B. Majesty's Minister is couched in terms that we should not have expected to find in a report emanating from a respected Missionary body. The notification was approved of by Her Majesty's Government, and the diplomatic correspondence published in last June shows that the course adopted by the British Minister met with the full concurrence of the Government of the United States. It is difficult to understand how a missionary can suppose his work hindered by a disability to publish a newspaper in Japanese. Tracts and treatises on Christianity in that language can be and are published with perfect safety, and in Ósaka we believe a newspaper in Japanese is actually circulated under missionary auspices, but printed and published by a Japanese subject. Dr. Faulds' acrimonious style lends neither elegance nor persuasiveness to his productions, and we should suppose it calculated rather to impede than to forward the cause he has at heart, and for which we are assured he labours with an earnest and faithful devotion. If to any one, to a preacher of the gospel the Juvenalian motto '*nesciat irasci*' applies, a maxim Dr. Faulds appears to have momentarily forgotten.

Elsewhere in our columns will be found some interesting particulars, taken from *Nature*, of the Eucalyptus. At both Kobe and Osaka this tree has been planted and has proved a decided success, growing freely and rapidly. Here, perhaps, the winter is rather too severe for it to flourish in all situations, but where it has been planted in a position sheltered from the northerly winter wind it has proved a success. The south of Japan should be particularly favourable to its growth, where it might be planted with advantage in marshy and low lying districts. The Americans, as might be expected, are not slow to perceive the advantage of planting the Eucalyptus, and by last mail we learned that the Southern Pacific Railroad Company is to begin planting the 200,000 Eucalyptus trees which have been raised for it by Major Locke of Pasadena, as soon as sufficient rain falls to render the ground easy to work. The plan of planting them continuously along the line of the road has been abandoned as being too expensive in the item of cultivation, and the Company now expects to plant them in forests at each station along their line of road in Southern California.

The *Chóya Shimbun* publishes a strange story which comes from the Bonin Islands. An official living there has written to say that the Islands are gradually increasing in prosperity and that schools and dwelling houses will soon be erected. He then goes on to say that a man named Charles Babaya (?) formerly living on one of the Southern islands, settled at Omura seven years ago. Here was living a widow named Chineriya, who had with her four children and six grandchildren. With her Babaya formed an alliance and they lived together as man and wife, until the woman died on the 6th of this month, of some illness. Babaya went mad with grief at her death, and after washing and dressing himself in his finest clothes, and putting on the articles of jewelry belonging to Chineriya, he took a pistol, and kneeling down before her grave shot and killed himself.

The last news from the famine districts in India is of a more cheering character. According to the *Bombay Gazette*, in the Madras districts the famine is fast disappearing, and there is every probability that in a few weeks, if it be met with vigorous treatment, the worst will be over. Timely rains have averted much of the threatened evil. The crops are looking more promising, and prices of grain are showing a tendency to fall in most districts. Reports from all parts are of a more favourable character, and the best proof of a steady improvement is that in a period of three weeks the reduction of the number of persons receiving relief in Madras amounts to 675,000. Of course, the bill which the Indian Government will have to pay for meeting the calamity is no small one. The above named journal estimates the total cost of the famine in Bombay and Madras at 10½ millions, nearly double the original estimate. But the money is well spent, if the lessons taught by this terrible expense be laid to heart, and proper measures be taken to prevent the recurrence of a similar calamity. Within a month the most terrible of the evils have disappeared, while pestilence has everywhere ceased. As the writer justly remarks, only in India could this be possible, and only in India under the British Government.

The Russian man-of-war *Vsadnick* has left for the coast of Yesso, in search of the wreck of a Russian vessel, the news of the loss of which reached Hakodate just before the *Elizabeth* left that port, and was reported by her on arrival yesterday.

The *Madras Mail* is not liberal in its expression of gratitude to the Queen for having contributed to the Madras Famine Relief Fund only five hundred pounds, which it calls rather a paltry sum. It points out that this represents only the weekly income which Her Majesty derives from the Nield bequest of £250,000. Mr. Nield was a madman who had relatives in Madras (is the writer in the *Madras Mail* a distant and disappointed connection?) but who most unfeelingly ignored their claims and left the whole of his wealth to the Queen for her sole use and benefit. When his Madras relatives asked the Queen to give up the legacy to them, Her Majesty distinctly refused to do anything of the kind. The interest has accrued until the bequest now represents half a million sterling. The Madras relatives have not yet forgotten their disappointment, or forgiven their Sovereign for disappointing them of their expectations.

Wrestling has such charms for the people of Japan that even the mild and unexciting sport of bull wrestling is certain to attract admiring crowds. What would be said to a novel wrestling match which, according to the *Athenæum*, took place at Triplicane between a famous professor of gymnastics, a native of the Punjaub, and a black bear of uncommon size belonging to the Rajah of Nagari. The contest was of a very exciting nature, as the bear appeared to be a perfect master in the art of wrestling and proved a most formidable opponent. The contest lasted over half an hour, resulting however in the complete defeat of the bear. His antagonist ultimately did not escape without punishment, as the bear made free use of his claws and teeth upon the man's naked body. The match was witnessed by about eight hundred spectators.

One of the servants of the Chinese Embassy in London was lately arrested for being drunk and disorderly in the Euston Road. On being brought up at the Marylebone Police Court, the Secretary of the Chinese Embassy appeared and deposed that the defendant was in the employ of the Envoys, and con-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

sequently claimed exemption from the jurisdiction of the Court. He was therefore at once liberated and handed over to be dealt with by his Legation. The question that now torments those English philanthropists who have exhausted the Penge case, is what punishment will be inflicted on the offender. Horrible visions of cutting into ten thousand pieces, the cangue, and other dread punishments dear to Celestial minds are haunting the British breast. The *Daily Telegraph*, in commenting upon the case, relates a dreadful story of what once occurred at one of the chief European Courts—the facts are stated in a vague manner—where a Persian Envoy ordered one of his servants for a certain misdemeanour to be flayed alive. "The offence the luckless menial had committed was of an excessively heinous character. He had been put in charge of a charcoal stove; he had allowed it to get out of order; and the noxious vapours from it had asphyxiated the Ambassador's son. In Persia instant impalement would have been the reward for such *crassa negligentia*, and, in contenting himself with simply ordering the offender to be flayed alive, the Envoy probably felt that he was exercising considerable mercy and forbearance, and doing much to meet half-way the foolish prejudices of a nation of Giaours and Franks. Unfortunately the Giaours took a different view, but withal firmly intimated to the Ambassador that, although by the comity of nations he was at liberty, if he so chose, to flay his servant alive in his own back garden, the taking of such a step would none the less be regarded as an indication of a wish to break off diplomatic relations. The Envoy's answer showed him a profound adept in the Machiavellian art. He replied that the offender, in deference to the wishes of the Court to which he, the Envoy, was accredited, should not be flayed alive, but should be sent back to Persia. The letter of this promise was strictly fulfilled. The wretched man was sent back to Persia, it is true; but he was heavily manacled in a ponderous iron cage and with instructions that he was to be, on his arrival in Persia, pegged down over an ant's nest." The narration of this unpleasantly thrilling narrative is not calculated to delay the anxiety of a British public as to the (imagined) probable fate of the crapulous Chinaman.

J. W. Alvin Adams, the founder of the first express agency in the United States, recently died near Boston. Five and thirty years ago, long before the introduction of railroads, Mr. Adams began his career by forwarding to their destination letters and packages entrusted to his care. The business which he at first carried on unaided, delivering his consignments on foot, increased until he was compelled to make use of a horse and cart. When railroads were introduced Mr. Adams, seeing that his occupation would be gone unless he kept pace with the requirements of the times, managed to make an agreement by which he received permission to run a truck or waggon on any train. By degrees, as his system became known and public confidence increased, the convenience attending such a mode of sending packages to any part of the United States was recognised, and hence his business grew to the importance that it now assumes, and became a necessary institution. It has, indeed, been several times debated whether it would not be advisable to abolish the Post Office, and hand over the carrying of the mails to such firms as Adams & Co. and Wells, Fargo & Co. In fact, these companies are looked upon as being quite as secure as though the business were in the hands of the Government, and all this has been the work of one man extending over the comparatively short period of thirty-five years.

From the "Japan Mail Daily Advertiser."

Monday, 26th.

Shimadzu Saburo is at present Tôkiô. A paragraph in the *Main chi Shimbun* states that he arrived in Yokohama by the *Kokonoye Maru* at 1.30 a.m. on the 24th instant, but owing to the state of the weather did not land until six o'clock the same evening. The prince with his suite, who were all dressed in the olden style, left for Tôkiô by the 9.30 train yesterday morning.

From the *Osaka Nippô.*

At the outbreak of the Kagoshima rebellion, Mr. Shinagawa, the Japanese Consul, requested the Chinese Government to prevent the export of arms, to which they assented, and carefully and strictly enforced the edict issued. It is rumoured now that some present will be made to the Chinese Government in consequence, as was the case at the close of the Saga rebellion.

At Serino a place about ten *ri* from Kagoshima, a gold mine is being actively worked. This mine was first opened by Shimadzu, and for this reason six-tenths of the gold produced is given to that family, while the remainder is taken by the Government.

From the *Nichi Nichi Shimbun.*

The Government has projected an Agricultural Establishment on a grand scale at Komabano. Thirty-six houses have already been erected, and when all the buildings have been completed, the whole will probably be used as an Agricultural College.

From the *Hôchi Shimbun.*

H. E. Sanjô has not attended his office since the 22nd instant, on account of illness.

From the *Akébono Shimbun.*

When the Press-laws are reformed, a revision will take place of the laws relating to the publication of books.

The crops in various parts of the country were excellent this year, and we bear that the Cotton crop is twenty per cent better than usual.

Tuesday, 27th.

The P. M. Co.'s steamer *China* left Hongkong at daylight on Sunday morning, the 25th instant, and will consequently be due here about the 3rd proximo.

The Kawasaki iron bridge is to be opened to-day. No especial ceremony will take place, but H. Ex. Ito, the Minister of Public Works, will leave Tôkiô in the ordinary 2.30 train this afternoon, which will be the first train to cross the bridge. Thenceforward the iron bridge will be used for all traffic, and the old wooden bridge will be speedily demolished.

From the *Nichi Nichi Shimbun.*

It is said that the Commissioners of the various *Fu* and *Ken* who were sent to Tôkiô to represent their districts at the National Exhibition, are consulting now as to the desirability of dividing the Empire into six great divisions, where Exhibitions can be consecutively held every year, that every sixth year being a grand national one on the plan of the Uyéno Exhibition.

Form the *Akébono Shimbun.*

The Government, we hear, will shortly issue a law regulating trade marks.

H.E. Tokudaiji, the Minister of the Department of Imperial Household, had the decoration of the 1st class of the Rising Sun conferred upon him on the 22nd instant.

From the *Hôchi Shimbun.*

There are at present four hundred foreigners in the employ of the Japanese Government, and two hundred and ninety-two engaged by private individuals.

The *Seiki Kan*, as soon she has finished certain repairs at Yokohama, will proceed to Europe. Her officers will first endeavour to see something of the war now going on between Turkey and Russia, and then the ship will visit various ports of Italy, France, England, and other countries.

The Government gas works at Hamazaki-chô, Shiba, Tôkiô, are now capable of producing 500,000 cubic feet of gas per day, but as the residents of the brick buildings in the neighbourhood of Kiôbashi are gradually getting to use gas, the amount hitherto produced has been found insufficient, so the French manager of the works has gone to England to obtain plant sufficient to produce 2,500,000 cubic feet. Preparations are now being made at Shiba to set up the new works, the cost of which will be about 135,000 *yen*.

Wednesday, 28*th*.

The *Hôchi Shimbun* relates as a piece of strange news, that a tradesman living at Okagami-mura in Kanagawa *Ken*, had recently built himself a new house, and on its completion invited his neighbours to a feast. While they were enjoying their *saké* and other good things, a badger made its sudden appearance, and looked on as though highly delighted with the proceedings. One of the guests, more bold than the others, approached and offered the animal a cup of wine, which was accepted. Late at night, when the guests took leave of their host, the badger disappeared.

According to the *Chôya Shimbun* a disturbance took place between the military and the police on the evening of the 25th instant. The caps and truncheons of three policemen were taken from them and carried as trophies into the barracks by the soldiers.

From the *Hôchi Shimbun*.

Otani Shinzo, living at Kita-Honjo, Tôkiô, on digging in his garden not many days ago, found 1,000 nibus.

From the *Chôya Shimbun*.

A man named Noro, residing in Tôkiô, has requested permission of the authorities to sell horse flesh for food.

From the *Nichi Nichi Shimbun*.

There are 800 policemen in Kagoshima *Ken*, and the expense of keeping up this force amounts to 5,000 *yen* per month.

From the *Akébono Shimbun*.

As the survey of the various *Fu* and *Ken*, which was necessary for the new assessment of the land tax, has been nearly completed, the Bureau which was established to control this work will very shortly be closed.

H. Ex. Sameshima, the Vice-Minister of Foreign Affairs, will leave for France shortly, in order to resume his position as Envoy at the French capital, and will be followed in January next by H. Ex. Matsukata, the Vice-Minister of Finance, who will act as Commissioner at the Paris Exhibition next year.

From the *Hôchi Shimbun*.

Snow fell to a slight extent on Atago-yama, Kiôto, on the 19th instant. There was also a snow storm on the same day at Konome-togé, Echizen, when the ground was covered with snow to the depth of a foot and a half.

Thursday, 29*th*.

We are happy to say that a movement is on foot to entertain Admiral Patterson, Captain Young and the officers of the *Tennessee* prior to their departure from this port, at a Ball on Monday evening next, the 3rd instant, which is to take place at the *Machigaisho*. During the long stay of the *Tennessee* in this port her officers have dispensed their hospitality in a most liberal manner, and the success of many of our public meetings or amusements of various kinds has been owing in no slight measure to the attraction derived from the attendance of the band of that vessel, so that we are glad that arrangements for the projected compliment have now been fully agreed upon. The following gentlemen have been appointed a Committee :—

Messrs. Henry Allen, Jr., (Secretary) ; E. de Bavier, Capt. Bridgford, R.M.A., Messrs. A. Conil, Alex. Center, J. Dodds, Wm. McDonald, H. W. Denison, Augustus Evers, F. von Fischer, Edward Fischer, J. A. Fraser, G. Farley, F. E. Foster, A. W. Glennie, P. Jaudon, J. J. Keswick, M. Kirkwood, J. P. Mollison, J. Russell, Russell Robertson, (Chairman) ; H. S. Wilkinson, and Thomas Walsh.

The *Nichi Nichi Shimbun* states that the Finance Department has established a special Bureau, called the *Johei Kioku*, which will have charge of all arrangements for receiving the partial payment of the land-tax in kind, as lately conceded by order of the Government.

From the *Chôya Shimbun*.

Their Majesties the Empress and Empress Dowager visited, on the 27th instant, the *Yôchi-In* of the Kinder Garten, attached to the Female Normal School, Tôkiô.

From the *Akébono Shimbun*.

We have heard a rumour that some agitation prevails at Okayama *ken*, and also at Hiroshima and Kumamoto *ken*, but until further confirmation is received the above report must not be relied upon.

SECOND NATIONAL BANK.

(Dai-Ni Koku-ritsu Ginko.)

Statement for the week ending 24th November, 1877:—

Total Amount of notes (dollars) received by us from the *Shihei-rio*		1,200,000

In Bank notes and cheques	116,003.40	
Deposited with Foreign Banks	50,000.00	
	646,045.00	
Do. in native currency	79,500.00	
	725,545.00	

Friday, 30*th*.

Owing to the uncertainty of the departure of the next American mail, it has been thought advisable to postpone the performance of the Amateur Dramatic Club until Thursday evening, the 6th proximo.

The steamer *Zanzibar* left Singapore for Hongkong on the 19th instant.

During her absence from this port H. M. S. *Modeste* has lost two of her men by drowning. One man fell overboard at Nagasaki and his body was not recovered until after the ship had left that port for Kobe. The second man, a carpenter's mate, was washed overboard when off Himishima in the Inland Sea, while engaged in removing the fixtures of the accommodation ladder. This occurred at 3 o'clock in the morning when it was very dark, a strong current was running and it was blowing hard. Immediately the alarm was given Sub-Lieutenant Boyer gallantly jumped overboard to the rescue, and succeeded in reaching the drowning man, who seized him and dragged him under. Lieut Boyer freed himself from the man's grasp only just in time, as at the instant the boats, which had been lowered with the least possible delay, reached him, he was quite unconscious, and in a moment more would no doubt have been himself drowned in his noble efforts to save the unfortunate seaman.

The closing ceremonies of the Exhibition at Uyéno will be held to-day, at which Their Majesties the Emperor and Empress, with the high officials of the Government, will be present. The military bands will be in attendance and play both morning and evening. A grand display of fireworks and illuminations are also announced to take place.

We have received from Hongkong particulars of an accident to the steamer *Yesso*. That vessel arrived at Hongkong from the coast ports early on the morning of the 22nd instant, and had only been about a quarter of an hour made fast alongside Messrs. Lapraik & Co.'s wharf when the foremost boiler exploded. The steam penetrated to the steerage deck, which was crowded by Chinese passengers, of whom twelve were instantly killed and ninety-four seriously injured. The latter were immediately sent to the hospital, where it was found that many of them were fatally hurt. At the time of the accident, for which no cause was assigned, the boilers were being blown down, and the second engineer was in the engine room. He succeeded in reaching the deck, but there fell down, and it is feared he has received grave injuries.

The *Nichi Nichi Shimbun* of yesterday announced that to-day would not be observed as a holiday by the Government Departments, thought at one time, in view of the closing of the Exhibition, it was arranged that all public offices should be closed.

The *Chôya Shimbun* says, that at the conclusion of the Kiushiu rebellion, the Governor of Kochi *Ken* (Tosa) petitioned the Central Government that he might be allowed to continue the police force

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

of the *Ken* on the extended scale which had been necessitated by the rebellion. The regular allowance for police purposes was, however, only sufficient to support a force of about thirty men, but the increased force would comprise six hundred men at an annual cost of about 73,000 *yen*. It is not surprising that the Government refused the Governor's request, but undeterred by his first failure he has renewed his petition to the same effect, asserting that it is impossible to keep order in the district under his governance with a reduced police force.

From the *Akébono Shimbun*.

As cholera has disappeared in Tôkiô, the cholera hospitals at Mukô-ga-oka, and Ichigaya will be destroyed by fire, some time between the 1st and the 5th of next month.

From the *Nichi Nichi Shimbun*.

Shimadzu Tadayoshi, and Shimadzu Tadanari, who recently arrived in Tôkiô, will shortly present themselves at the Imperial palace.

Saturday, 1st.

The M. B. Co.'s steamer *Saikio Maru* left Kobe yesterday evening at 7 o'clock.

The *Nichi Nichi Shimbun* gives an account of the horrible murder, at Osaka, of an entire household by a boy of sixteen, on the night of the 21st instant. A shopkeeper named Shimano Kihei, lived at Shinmachi, Osaka, his household consisting of his wife, daughter, a maid servant and the perpetrator of crime, Komakitchi, who was employed in the shop. While they were asleep the victims were despatched with a sword, one after another. Komakitchi then hastened to the nearest police station, and gave information that robbers had broken into the house and killed all within but himself, he having escaped by hiding himself underneath the floor. Several policemen accompanied the boy back to the house to try and arrest the robbers, who, of course, could not be found. In due time the victims of this murder were buried, and then Komakitchi was subjected to strict examination with the object of discovering the perpetrators, and made so many contradictory statements that suspicions were aroused, which were confirmed when the boy dropped a packet of 600 *yen* from his pocket, of which he could give no satisfactory account. Stricter examination extorted, at last, a confession of his guilt.

According to the *Hôchi Shimbun*, it has been officially determined upon that the 27th September shall be considered as the date on which the Kiushiu rebellion ceased and peace was restored, though the final defeat of the rebels took place on the 24th September.

From the *Hôchi Shimbun*.

Some discontent was said to prevail among the *samurai* of Chôshiu who fought during the late rebellion, and who have since been disbanded, but as the memorial they lately addressed to the *Kencho* is of a very pacific nature, no trouble from them is apprehended.

From the *Chôya Shimbun*.

The War Department received in all from the Finance Department on account of the recent war, the sum of 34,200,000 *yen*, of which 167,600 *yen* were expended in Tôkiô and 30,520,000 *yen* in Kiushiu. Of the above total sum received, a balance of about 1,000,000 *yen* remains on hand.

The repairs of public buildings has hitherto been done by the local authorities of *Fu* and *Ken*, but the same will now be undertaken by the Government, and the estimate for such for the fiscal year from 1st July, 1877, to 30th June, 1878, is 500,000 *yen*.

From the *Akébono Shimbun*.

The building which was erected at Government expense for the Minister of Foreign Affairs, has been allotted to the Prime Minister.

From the *Mainichi Shimbun*.

The Kanagawa *Kencho* has expended upwards of 200,000 *yen* in the measures undertaken to stamp out and prevent the spread of cholera.

According to returns made to the *Machi-gaisho*, there are 3,325 wells in Yokohama, 1,073 only of which contain water fit to drink.

GOVERNOR HENNESSY.

NO attentive student of the social history of the world during the last fifteen or twenty years, can fail to perceive the marked improvement that has taken place within that time in the relations between the so-called superior and inferior races of mankind. How the supreme scorn of the white man for his black, red or yellow congener originated it were not by any means a profitless, but a very difficult task to determine with accuracy. No such contempt seems to have been entertained on the mere ground of difference of colour by the ancient Greeks or Romans for the various Eastern and African races with whom they came into contact. With the swarthy Arab or Syrian, the yellow-brown Egyptian and the coal black negro, the literary and political ancestors of modern Europe were perfectly familiar, but neither in the literature of the former nor by the policy of the latter were the dark-skinned races of the ancient world treated with any special dislike or abhorrence. In the chronicles and poetry of the middle ages the same indifference to mere diversity of pigment is shown, and the early Spanish, Portuguese and Italian travellers appear to have been equally free from prejudice on the score of colour. And we may safely say that the modern contempt of the white man for the rest of mankind did not display itself previously to the commencement of the eighteenth century, from which period it increased in intensity until it reached its climax some fifty or sixty years ago. But there are abundant signs that a healthier sentiment is beginning to animate the counsels of European nations in their dealings with the dark-hued peoples of Asia,—a sentiment of which the result of the American Civil War has, no doubt, greatly aided the development. The talk current in the East twenty years ago, when the subject was the relations of white to yellow humanity, would not now be tolerated in the least progressive European settlement east of Singapore, and the policy which most Eastern residents would still prefer to see followed towards the peoples among whom they live, would, if plainly stated in England and America, meet with an almost universal reprobation. We are not, therefore, surprised either at the opposition offered in Hongkong to the generous and humane policy of its new administrator, or at the favourable reception given to his bold, but most necessary proposals of reform by the Colonial Office—at all times the most liberally and wisely conducted department of the Imperial Government of Great Britain. It is not our intention to dilate upon the enormities disclosed in the Report of the Hongkong Colonial Surgeon, Dr. AYRES, or to pass condemnation upon the brutal practice of branding —that is, we suppose, searing with a hot iron the flesh of Chinese prisoners—or to animadvert at any length upon the miserably insufficient allowance of *air* to the yellow skinned tenants of an English gaol. Torture of all kinds as a means of punishment for rational beings, however depraved they may be, we believe to be useless cruelty. The history of crime shows in the most conclusive manner that the mode of punishment is of infinitely less importance, so far as its deterring effect is concerned, than the certainty of punishment, and that rigorous segregation with an exclusion of all the luxuries of life, reducing the criminal to the mere bareness of

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

existence and depriving him of the enjoyment of nearly all those faculties in the exercise of which happiness can alone be found, is a sufficiently severe punishment without the adjunct of whipping, branding or physical torture of any kind. Nor are our observations applicable to the white races of Europe alone. The statistics of American crime and American prisons show that negroes are susceptible to precisely the same influences and in precisely the same degree, as their white brethren in wickedness. We believe that Indian statistics tell a similar tale with regard to the effect upon Europeans and natives respectively, of similar punishments and similar modes of prison treatment. Indeed, the old theory of racial superiority and inferiority is losing ground daily, and men of science no longer express wonder at the same mental and moral nature being existent throughout all mankind. Darwin long ago remarked that the more the character of a Fuegian who was taken home in the *Beagle* was understood, the more he was found to resemble in all essential points an European of the ordinary type. And the Fuegians are counted among the lowest of mankind.

Few facts, however, are more pertinent to our present purpose, than the result of the immense changes in the criminal law and procedure of this country which the last five or six years have witnessed. A code of almost unexampled severity, not carelessly, but very vigorously administered, has been replaced by a system milder than that which obtained in England at the commencement of the present century. Yet crime generally, we have good reason to believe, has constantly diminished, and serious crime, it is well known, has very greatly diminished, notwithstanding the unsettled state of the country, the masses of idle men whom the revolution of 1868 threw loose from the restraints of the feudal system to subsist as best they could upon a pittance, and the commercial distress that, ever since 1872 at least, has thrown a gloom over the new birth of the Japanese people. When flogging was abolished in the English Navy, the usual cry that the 'service was going to the devil' was of course raised, but not a single inconvenience has been shown to have been caused by the reform. It is true flogging is still retained in England as a punishment in certain cases, and in India, as we discovered to our dismay in the course of the enquiries which the present article necessitated, there exists a Whipping Act, passed in 1864, which appear, to be of far too extensive an application. But in spite of these indications to the contrary, the spirit of the policy of England at the present day is wholly opposed to cruel and vindictive punishments, and wholly in favour of a rational and humane treatment of even the worst criminals. And we may feel sure that England will insist upon this policy being followed in all those dependencies of which she has the direct control, and towards all subjects of the Queen, be their colour black, yellow or white. No doubt disproportionate severity of punishment is, under exceptional circumstances, sometimes justifiable. Nor can it be denied that physical punishment has occasionally proved of signal efficacy. But such results do not by themselves constitute an argument for cruel or torturing punishments, any more than the success of persecution in Spain, and to a less extent in France and Italy, in stamping out heresy, would be considered by the liberal Catholic of to-day as a justification for rekindling the fires of the Inquisition. We are sure that there are many among us who understand and admire the spirit of Mr. HENNESSY'S new policy, and we are equally sure that a firm perseverance in the path he has marked out for himself, will meet not merely with success, but in the end with the approbation of most of those who now oppose his reforms. Let the Chinese in Hongkong meet with the treatment of Englishmen; as long as they are essentially treated as inferior beings they will be sure to become or remain so. After all, what proofs are there that a Chinese thief is worse than a British one? The peculiar situation of Hongkong attracts, no doubt, a number of scoundrels, but what is there to show that each individual scoundrel is so much worse than a British one would be under similar circumstances, as to require a lower grade, so to speak, of criminal treatment? The inconveniences of her proximity to the Chinese coast Hongkong must make the best of; she cannot justly seek to obviate them by unjust and partial laws affecting a portion only of her population. Surely the wit of the colony can devise other and less brutal means than flogging and branding of protecting herself against Chinese rascality.

The high-handed policy favoured in the colony, is a reflection of that which has, until recently, been pursued by European Powers with respect to the Governments both of China and Japan. The best political thought in England and America fully recognises that the interests of those countries, as well as common justice, require an abandonment of that policy, and that the faults of Eastern Governments are more likely to be intensified than amended by an unsympathetic, half-ignorant and wholly unwelcome tutelage.

A considerate and just treatment of even Chinese questions is sure to produce good results, and if these are of somewhat tardy realisation, they will, when once gained, be of a durable character.

THE UYENO EXHIBITION.

FROM an utilitarian point of view it is doubtful whether Exhibitions, so much the rage at the present day, produce results of any real advantage to society. A vast assemblage of heterogeneous objects imperfectly classified, and subject neither to the handling nor to the close examination of the public, rather affords an excuse for a lounge than an opportunity of instruction. Hidden in the recesses of glass cabinets, imperfectly lighted and lost in their multitude, the excellencies and imperfections of the articles exhibited are alike difficult of detection. Even in the hands of the juries they lead to false conclusions, for manufactured as they commonly are for the occasion, they form no true test of the industrial capabilities of a country under the ordinary conditions of commerce. We are not, therefore, disposed to encourage the practice of holding frequent miscellaneous Exhibitions, nor to attach much importance to the Reports that may be founded upon them, while we believe that the money they cost might be better employed in the creation and enrichment of permanent museums. The most really interesting and instructive portion, indeed, of the Uyéno Exhibition, which was closed last Friday, was precisely the collection of the various natural products of Japan that would properly find a

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

place in an ordinary museum. The show was not a brilliant one and attracted but little attention, nor had the authorities much exerted themselves to make it a complete one, or sought to arrange the products thus brought together so as best to allow of their comparison, or facilitate an appreciative survey of the resources of the country. But a vast mass of materials were there that well repaid examination, and gave a better notion than the whole of the rest of the Exhibition of the existing sources of wealth and prosperity upon which Japan must place her main reliance. To the Japanese, the most interesting section of the Exhibition was, probably, that devoted to the display of articles manufactured in this country upon foreign models. An inspection of the chairs, tables, boots, hats, etc., of European form but of Japanese make collected in this department, gave clear proof of the great dexterity of the Japanese workman. We set, however, but little store by this. Facility of imitation is characteristic rather of the so-called lower than of the higher races of mankind,—as any one who has travelled much about the world with his eyes open will readily admit. It is generally accompanied by a want of inventiveness, a defect of the Japanese mind prominently brought forward by the history of the people. Neither in literature nor in science can Japan boast of originality. Many centuries ago she put on a Chinese dress, over which she now throws an European garment, and the result is, under some aspects, a little ludicrous. Nor did we think such work in this department as we could inspect with any closeness, good in character. The ornamentation and design were clever and faithful imitations of foreign models, but the putting together of the parts was weak, flimsy, and the whole wore a scamped look, not by any means that of honest workmanship. For minute work of all kinds the Japanese craftsman seem to possess a special talent, but he is, as yet, wholly destitute of the artisan-conscience which compels the European workman to make the article he is producing as fit as possible for the uses to which it is intended to be put. Durability is the grand test of good worksmanship, and Japanese chairs and tables, boots and hats, like Japanese houses, bridges, roads, and promises, do not well stand this test.

In one respect the Uyéno Exhibition shows a distinct retrogression. The Japanese have practically forsaken the art of their foregoers, and are wandering in a barren desert productive only of forced and stunted essays after western models. They are becoming inferior draughtsmen and mere designers, in lieu of the truthful and original artists of unequalled excellence within their special sphere that old Japan could boast of possessing. Inventiveness even in art has departed from them, their modern productions show them to be mere imitators of themselves, and the imitation even is imperfect, being diluted by the desire to please the western buyer, who has a totally different taste from that which the beautiful bronzes and lacquer, the exquisite ceramic ware, and the spirited and original drawings of pre-Perryan days were designed to gratify. Gorgeous screens, heavy with superficial gilt, and overburdened with incongruous compositions, fans painted with glaring colours and intricate subjects, lacquer cabinets charged with expensive ornamentation, may well enough serve the purposes of trade, but they sound the knell of that incomparable art of the past—developed from a Chinese initiative it is true, but developed under such conditions and after such a fashion as to possess an indubitable claim to be considered as an independent product of the indigenous genius of the country. The tendency to meretricious design and ornamentation is well seen in the bronzes which are now fabricated on so large a scale for the European market. A close inspection of the best of these will reveal an entire absence of that careful finish distinctive of the conscientious work of the old artists, and a good deal of untrue and unfaithful work besides. The compositions are deficient in vigour, being copies by a craftsman, not creations by an artist, and are too often mere hap-hazard collocations of figures of men and animals, destitute of that informing spirit which the true artist breathes into his work, and which unites multitudinous parts into a complete whole having a distinct meaning, and translating with sincerity the thought of its producer. The essays in western art we can hardly find a word of praise for. They were without exception wretched daubs hardly fit to hang out as signboards, although in some we noticed honest and meritorious drawing. Of course, this was to be expected. Art cannot be profitably imitated, though hats, boots and machines may; it must be learnt, and the process of learning is long and tedious. We do not by any means wish to discourage the study of western art in the country, but we cannot refrain from expressing our regret at the apparently uncared-for extinction of that singularly bold and original school of indigenous art, of which the works of HOKUSAI are the best known examples.

We have commented with some severity, perhaps, upon the shortcomings of Japanese industry. But we are sure the honest truth is salutary, especially in the case of a people who have been petted and praised to the extent to which the subjects of the MIKADO have been befooled, by admirers more enthusiastic than well informed upon the matter of their frenzy. These can be no doubt whatever, and the Uyéno Exhibition is a strong proof of the fact, that there is a real desire on the part of a very considerable portion of the educated classes in Japan to understand and adopt the material side of European civilisation, and the comprehension and gradual assimilation of the moral side of that civilisation will surely follow; nay it is certain that the process has already begun. We are only desirous of saving the Japanese from a conceit that may much retard their progress, a conceit engendered by the extravagances of some among their western admirers, but, to the honour of the Japanese be it said, much less than those extravagances might fairly justify them in entertaining, and we trust we shall always be as generous in recognising their merits, as we have been to-day candid in commenting upon their defects.

Being informed yesterday that a white winged woodcock had been shot by a resident, we hastened to inspect the natural curiosity. Four quill feathers of the left wing and one of the right, besides several of the wing coverts on both sides, were pure white. Occurrences of this kind of variation in the plumage of this bird are not extraordinarily rare, as, if we mistake not, an instance or two generally gets chronicled in the columns of sporting and natural history newspapers in England nearly every Winter, but we have seen a good many woodcocks alive and dead both at home and in Japan, and this is the first instance of the kind which has ever come under our own observation.—*Hiogo News.*

SPIRIT OF THE JAPANESE PRESS.

Government Secrecy.

("Chôya Shimbun," November 27th, 1877.)

In all progressive efforts it is necessary that a certain method be observed in carrying out the various reforms, for if such be neglected the results will certainly be fruitless. Owing to her intercourse with foreign nations the Japan of to-day is very different from the Japan of ten years ago. Men in the middle class of society commence to exercise their minds upon politics, and this has given rise to much discussion, some urging that the people should have a voice in the Government, others affirming that the administrative power should for the present remain with the Government alone. But when we seek the point to which all these arguments tend, we find that they have all the same purpose, the establishment of a National Assembly.

Although it seems to us that if strong arguments in favour of its institution be brought forward there would be no resisting them, yet we find that the people think less of the matter day by day, so that at present there is no shadow of a chance of its establishment, neither can we form any idea when it will take place. The reason of this utter collapse of the question is that the writers who urged its consideration had no idea of the order of progress, and thus, on the impulse of the moment, urged the immediate institution of a National Assembly without thoroughly understanding what they were demanding. We will therefore endeavour to show in what order of progress the establishment of a National Assembly would become a possibility.

Now when we inquire the purpose and use of a National Assembly, we find that it is to aid in carrying out representative Government, and to act as a check against absolutism. The secrecy of action of an absolute Government, and a National Assembly are two things than can never be co-existent. In order, therefore, to arrive at the fulfilment of our cherished hope of having a National Assembly, we must first in their due order reform those old customs which are useless and do away with secret action. Before such steps are taken it is, we fear, useless to talk about the establishment of any representative institution.

In looking back we find that the demand for a National Assembly was at one time the most popular cry, but now the mania seems to have passed away and we scarcely ever hear it mentioned. When the actions of a Government give rise to distrust in the minds of the people, it is because the conduct of the affairs of the nation is clothed in mystery. When therefore such a wide distance separates the Government from the people it is vain to expect a National Assembly. To bring forward proof of what we say, nearly a year's revenue was exhausted in the suppression of the Kiushiu rebellion. The people know full well that although the Government had certain funds in reserve and is exercising the strictest economy in its expenditure, it cannot meet this vast outlay. Some therefore argued that recourse should be had to a foreign loan, or that the taxes be increased or that there should be further issues of paper money. When the present Government first came into power, it called in and redeemed all spurious monies which existed to a great amount. Since that time it has never been financially troubled, but now that it is called upon to bear the enormous expenditure caused by the late civil war, surely it should appeal to popular opinion and thus share with the people the hardship that Japan must bear. But in regard to this it seems as though the Government were utterly indifferent, since it leaves the people to imagine that the difficulty will be met by the reckless issue of paper money. We do not pretend to say whether this will be so or not, but such ideas arise among the people, owing to the mystery by which the Government surrounds itself and the wide gap which separates it from the people.

What we would suggest, therefore, is, that whether the Government decide to create a national debt, or to increase the taxation, or to issue more paper money, or make a foreign loan, it will let the people know what is being done, so that there may exist no chance for suspicion in their minds. The first step that the Government should take is to abolish secret action.

By Land and Sea.

("Osaka Nippô," 22nd November, 1877.)

The Railway Department has recently stopped the running of trains between the Mumeda and Adjikawa stations. This is owing to the canal between Dojima-gawa and Adjikawa having been completed, so that vessels are now enabled to penetrate into the most busy parts of the city, and there is thus no longer any further necessity of their being transported thither by land. The line of railroad that has been opened between these two points has therefore ceased to be of any use or convenience. Now, however short the distance may be, such a piece of road cannot have been constructed for nothing. The only reason therefore that the officials could have in closing this line is that it is not needed, and that it would not pay running expenses.

Japan is an island, and apart from the necessities of foreign commerce, must carry on her trade by means of ships. Hence the far-seeing ones in the Government and among the people recognized the necessity of the formation, under the protection of the Government, of the Mitsu Bishi Company, whose fleet now numbers fifty-four vessels. We see therefore great cause for rejoicing when we reflect on the progress of our marine commerce. There is also another shipowning company called the *Kinchiusha*, which has commenced running lines of vessels, leading us to cherish the hope that our mercantile marine will increase in importance.

Now, although as we have already stated, great progress has been made in this respect, the requisite means of land transport must not be altogether neglected. For instance, hemp is extensively produced in Echigo, and as this province is in the north-west, when it is required to send it to Chiugoku (the southern portion of the main Island including Chôshiu) it must be sent by ship from the north-west to the south-west, a long and inconvenient journey, or else it must be forwarded to the east coast by land, and then by sea to Chiugoku. But the roads from Echigo to the east coast are so mountainous, that owing to delays goods do not arrive when they are wanted, and thus no purchasers can be found for them. Railways would therefore be of much convenience, and facililate communication and open trade with the interior. But at the same time we cannot do without means for sea transport, and thus attention must be paid to providing facilities both by land and water.

There are some people who maintain that both railroads and steamers are goed things, but too expensive for Japan. Now such people only look on one side of the question, for if means of rapid transport are not provided, large quantities of produce will accumulate, causing unnecessary loss and compelling trade to remain depressed.

There are those who think that the construction of railroads, steamers, roads, bridges, canals and other like necessary works are as useless as building gorgeous stone edifices or lighting up with gas, which they ridicule as only the signs of a superficial civilisation. These things they urge should be left until the future, and that for the present we should devote all our energies to increasing our productions and manufactures, and to developing our national resources. They seem utterly to ignore the fact that railways are of the greatest importance in promoting such aims. It may be said that stone buildings are only good as being fire proof, and that gas lamps are of no use to any but those who walk in the night time, and that thus they are merely the outward forms of civilisation. Now, railroads and steamships are the means of procuring funds whereby the resources of the country can be turned to good account. If there were no means of transportation at all, productions would be confined to their several provinces. Now, while there are many of our more wealthy fellow countrymen who aim at increasing the means of transport by sea, there are but few who turn their minds to increased facilities of communication by land. This doubtless arises from the great difficulties that would have to be enconntered in bridging rivers or tunnelling mountains, and from a knowledge of the hardship that would be caused to those whose houses would have to be knocked down and fields rendered worthless. Moreover, there is the question of immense outlay and the length of time involved in carrying out the work. These are the reasons that prevent people from turning their attention to railroads. The Government for the sake of public convenience first made a line of railroad from Tôkiô to Yokohama, and then one from Kobe to Kiôto with a branch to Adjikawa. We trust therefore that the results may prove so satisfactory as to encourage the further construction of railroads. A western writer has said that if any expenditure should result, even to a small extent, in bringing about civilisation, it must be considered as having been well repaid. We heard that the Government was about to construct a line of railroad between Kiôto and Tsuruga, but before any steps are taken in carrying out such a project, the line between Mumeda and Adjikawa is closed. This news has caused as the greatest surprise,

---

We understand that a section of the passengers of the wrecked steamer *Meikong* have decided to take law proceeding against the Messageries Maritimes Company for the loss of baggage, &c., which it will be remembered some of them asserted at the time might have been saved.—*L. & C. Express.*

OUT OF BOUNDS:

Being an account of a Recent Trip into Shinshiu.

The morning after the gale, the 12th of October, was bright and beautiful, with that keen exhilirating freshness in the air which generally follows similar storms. The aspect of the village of Ushino was, however, lamentable, and now that the excitement of the previous evening had worn off, and the poor people were able to realize the extent of the ruin that had befallen them, there was a general expression of dullness and down-heartedness which it is rare to find among Japanese after the occurrence of any great calamity. They are generally so ready to set to work to repair losses, as for instance by fire, and accept their misfortunes so uncomplainingly, that this kind of dumb despair had a very painful effect. The disaster had fallen on them from so unexpected a quarter, that their energies seemed paralyzed. Huddled in mournful groups around piles of drenched bedding and soaked mats, or standing silently looking at a mass of thatch which covered all that they owned, they were making no effort to repair the ruin the gale had caused, remaining as though stupefied by the sudden visitation. I was glad enough to pay my bill,—little enough, but to which, with many apologies, an extra charge of fifteen *sen* had been added owing to the difficulties experienced in getting my supper and breakfast—and leave the little village. As I proceeded, the terrible effects of the gale were everywhere apparent. Houses flat on the ground; giant trees uprooted in every direction, the groves of *sugi* and red pine on the hill sides looking as though heavy artillery had played upon them. In many places massive limbs and huge trunks of these fallen giants, some of them ten and fifteen feet in circumference, lay across the road, rendering it impassable by horses, and making it a matter of considerable difficulty for travellers on foot to crawl over and under the mass of obstructions. The same condition of wreck and ruin I found at the more important villages of Uyénohara and Togawa, but here the inhabitants seemed to have recovered from their stupor and were hard at work repairing damages. Indeed, so busy were they all, that for a time I was unable to procure either man or horse to carry my baggage, and was compelled to be content with its transportation from one village to another, an arrangement which involved my having to engage a fresh man about every *ri*, and caused me much trouble and delay. I was, therefore, compelled to take my day's journey very leisurely, which I was not sorry to do, the weather being delightful and the scenery extremely interesting. The first colouring of autumn had just begun to light up the hill sides. Here a maple blazed out among the dark olive of a cryptomeria grove, while the sumach trees were already glowing in all the splendour of scarlet and gold. A cloudless sky, but still an atmosphere of dreamy haze, through which the mountains, topped by the peak of Fuji, showed with that softened beauty which is only seen in such Indian summer days.

Nor was the delay confined to the difficulty of procuring pack horses or coolies. The rumours that had reached the authorities of Kofu of the existence of cholera at Yokohama and Tôkiô had thoroughly alarmed them, and they were evidently determined that if the demon attempted to enter their district, he should at once be arrested and be made short work of. As I arrived at the top of the hill which leads to the entrance of the little village of Sekino, I was addressed in a commanding tone by a policeman who was seated at the door of a large farm-house commanding a full view of the road and all its travellers, and who, surrounded by all the mysteries of Government notifications and official looking documents, was a very imposing figure indeed, and calculated to strike terror to the most innocent-minded. I must myself confess to experiencing a sudden qualm and a certain weakness of the knees when I was thus commanded peremptorily to halt, while my fellow traveller, the pilgrim to Minobu, who seemed to find much pleasure and security in my society, turned the colour of conscious guilt. On obeying the summons, however, I found that there was nothing to tremble at, the man in authority being only terrible as to his voice, in other respects proving himself mild mannered and polite to the last degree. After asking whence I came and whither I was bound, he informed me that all travellers from Yokohama and the capital had to submit to a disinfecting process by order of the authorities. I professed myself willing at once to undergo the necessary ordeal, and after a slight delay, the pilgrim, myself and my servant were conducted to the back of the house, where we were bidden to enter a small room, whence emerged on our arrival three humbly bowing disinfected individuals. A bench was placed round two sides, but for me was a chair brought. In the middle of the room was a large *hibachi* with plenty of lighted charcoal, and on this stood an iron pan containing a small quantity of a thick, dark brown liquid. The doors were closed, and like the witches in Macbeth we watched the cauldron bubble. The policeman, for politeness sake, kept us company, and condescended to aid the effects of the liquid, which had neither smell nor taste, by partaking of some good cholera medicine, to wit a portion of the contents of my brandy flask, beguiling the time with many questions personal and general. I learned that the liquid was *sekitan-san*, and was supplied by the Government for disinfecting purposes. What its virtues are I cannot say. After the lapse of some ten minutes we were told that we might depart, and go on our way rejoicing. I ventured to suggest that in my baggage there might exist some latent germs of disease, and was told that attention would be paid to that matter further on. Sure enough, at the other end of the village I was again halted by a commanding voice proceeding from another gentleman in authority, who politely told me that my baggage must now be subjected to purification. To him also did I give a cup of my cholera medicine, which he generously divided with four other gentlemen, who having partaken each of abont a teaspoonful, declared themselves the recipients of a magnificent feast and that they felt themselves fortified against all evil. This official, who had been sent expressly from Tôkiô to superintend disinfecting arrangements, was a sceptic, inasmuch as he told me that there was no more *sekitan-san* in the place, but that it was of little consequence, as he had no faith in its virtues. He stated that he thought that if travellers could be treated to the process adopted for disinfecting baggage it might prove efficacious, and showed me the mixture used for that purpose. Seeing that it was composed principally of sulphur, I was explaining that the man who was shut up for ten minutes in a room where such means were used would never die of cholera, when back came my two coolies with my baggage. With tearful eyes and strangled voices they informed me of their readiness to proceed, and on enquiry I found that these unfortunates had either voluntarily or involuntarily been included with the baggage in the purifying process. *Hinc illæ lachrymæ.* After this I was allowed to proceed on my way without let or hindrance, and arrived at Yayen-bashi with no other delay than that caused by my treating all the children of a small village where I took my lunch, to lollipops, which to my surprise involved the enormous expenditure of fourteen *sen* and a half.

Yayenbashi—or monkey-bridge—is a charming little spot, the gorge over which the bridge is thrown and through which a torrent rushes far below, half hidden from view by the richly coloured, lace-like foliage of the maples that overhang its gloomy depths, being very picturesque. Especially striking was the scene in the last glow of a brilliant Autumn sunset, which dyed all the western sky with saffron and gold, against which the hills, clothed in rich luxuriance of foliage, stood out dark and cold, the steel blue river foaming over its rocks, glittering afar up the valley in the evening light.

Starting early the next morning, I reached Kuronota at the foot of the Sasago pass at about noon; a busy little place, with a somewhat bleak aspect as it lies at the foot of the lofty hills which rise up on all sides. The views along the road at various points are very striking, and great is the temptation to the sketcher to take out his book and pencil, and regardless of the remonstrances of his anxious and hungry servant or coolie, wile away a precious hour or two of daylight in jotting down a reminiscence of the pleasant scene. The wind breathes so wooingly, the hills rise so grandly into the soft blue air, the mountain stream splashes and tumbles in such foamy clearness among the mighty boulders of its bed, that in the keen en-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

joyment of the prospect, the need of lunch for oneself, or at least the wants of faithful attendants in that direction are disregarded, and one turns the corner of the road that shuts out the lovely scene, with a pang of regret and inward resolve to come back "some day" and enjoy with it a longer and more intimate companionship. Alas, that "some day" so often promised to ourselves but rarely comes, and we probably never behold again what has held us with the charm of its beauty.

"For what's impossible can't be,
And never, never comes to pass."

But it softens the regret at leaving it behind to delude ourselves into believing that there is hope of revisiting it in the future. Still there is no doubt that scenery alone is unsatisfying, and the representations of the faithful pilgrim and my hungry boy—the pack horse and his master have long since left me to my own devices, disgusted at my frequent delays and expressions of admiration at the landscape—create at last a corresponding feeling of inner emptiness, which vacuum I am fortunately able to fill before climbing Sasago-togé.

The ascent is pretty steep, especially near the summit, and I was glad to avail myself of a returning pack horse to get to the top. I was stiff and somewhat out of sorts from the effects of my long walk in the rain, and moreover had been compelled, since quitting Ushino, to walk in *waraji*, the native straw sandals, which are at first somewhat fatiguing to the foot, my boots being quite unwearable until I could get them stretched and oiled. On this morning, too, my *waraji* had given me much trouble, so that in a fit of impatience I had discarded them and was walking only in *tabi*, or cotton socks. These were all very well over the broad road which is well levelled and free from stones, but the sharp rocks and loose pebbles of the mountain path tried my powers of endurance, and I walked very much as the "shivering wanderer of the streets who tramps the homeless city" is seen to do when he is making his way barefoot across a newly macadamized thoroughfare. Therefore, of two evils choosing the least, I rode up the pass on a pack horse, thus relieving my feet at the cost of other and severe personal inconvenience.

The views along the valley as one approaches the summit are very fine. There are also several magnificent trees at the side of the road, which are well worth remark, so mighty is their girth and grand the spread of their rugged limbs. We stopped but once in the ascent, at a little roadside tea-house frequented by the owners of pack-horses, of which there were crowds being fed and watered. Throughout this district at all these halting places there is a large cauldron kept constantly full of hot water, in which a little rice and chopped straw is simmering, and of this *bouilli* the horses get a pailful or more, no cold water being given to them. I noticed that all the animals were mares, with scarcely any exception.

The view from the summit of the pass looking toward Kofu is really grand. A broad stretch of hill-side covered with the feathery *sudzuki* grass, gay with fiery patches of purple maple and many a shrub of crimson and scarlet and gold, sloping down to the fertile plain in which stands the town of Kofu surrounded on all sides by lofty mountains, above which tower the distant peaks of Shinshiu. The descent to Katsunoma forms a lovely walk, and even the sharp rocks and irritatingly stony condition of certain portions of the road could not destroy, though it somewhat marred my enjoyment, which the insecurity of a seat on a packhorse in descending steep and slippery places would effectually have done. At Katzunoma I found my baggage, and as from this place to Kofu, a little over three *ri*, the road is practicable for *jinrikishas*, I availed myself of their services and arrived at Kofu a little after seven in the evening.

Throughout the whole length of the Koshiu-kaido there was a remarkable abundance of chestnuts, grapes and persimmons, which were all of a size and flavour such as I have never before found. I was told that this year was *mansaku*, or a special year of plenty, fruit and grain crops being alike of singular excellence. On approaching Kofu there is a prosperous, well-to-do, go-ahead aspect about the little hamlets, which contrasts most favourably with the general state of things prevailing in country districts as far as I have seen. In all the small towns and villages are to be found newly erected court-houses and schools, built in so-called European style. Of their architectural excellence I can say little, as the builder has evidently taken for his model the wooden houses which are found in boxes of German toys. There they are on a large scale; the porch of painful simplicity, the windows with six square panes bordered with a thick black frame and surmounted by something that looks like half a cart wheel painted green, the tiled roof surmounted by a six-sided box terminating in a ball and spike. Seen at close quarters they cannot be said to be imposing, but from the plain of Kofu they lend a welcome relief to the eye amidst the monotonous brown of the Japanese houses, and make most effective objects in the landscape as they dot the sunlit hill-sides. The new road, also, is a work worthy of all praise. With the exception of the Sasago pass, and of one or two points where bridges have to be widened or thrown across a few chasms, it is perfectly traversable by carriages, and at many parts *jinrikishas* are already established. It is wide, well levelled, and apparently made with great care and solidity. Where there is danger from winter torrents, the embankment is strengthened by solidly built stone walls, and although there must always be danger, from the very nature of country that it traverses, of certain portions suffering from land slips or heavy rains, it is greatly to the credit of the local authorities or the Japanese Government, or both, that so good a road should be in course of construction to replace the mountain path, which three years ago was the only route through this important district. It is also much shorter than the old road over which I once passed, and the little that one loses in picturesqueness is more than repaid by the increased comfort of travelling. Before all things Japan has need of good roads, and I should be glad to believe that the Government has recognised this fact, and abandoning the tempting but delusive idea of building long lines of railroad, has determined to open up communication with the interior by the formation of such roads as the Koshiu-kaidô.

(To be Continued.)

THE WATER SUPPLY OF TOKIO.

By R. W. Atkinson, B.Sc.,
Professor of Applied Chemistry in the University of Tôkiô.

Read before the Asiatic Society of Japan, on the 24th November, 1877.

It is universally admitted that the water supply of a large town is a matter of the greatest importance to the health and well-being of the community, and it is a subject at the present time occupying the attention of those who are in any way responsible for the good health of the people, and of the people themselves. Experience has proved that many diseases have originated from a contaminated water supply, and though there may be differences of opinion regarding the nature of the action of the water, there are none concerning the fact itself. Instance could be added to instance of cases where a well having become infected in some way, the particular disease has been communicated to all who have drunk of the water. The majority of those who are competent to give an opinion upon the nature of the source of such diseases agree that they are due to the presence of minute organisms, too small to be seen even under the highest powers of the microscope, but capable of becoming developed and of reproducing their kind. The wonderful and rapid spreading of such diseases is one of the strongest arguments in favour of the germ theory of infection, and it is difficult to understand the rapidity of the growth of such diseases unless we compare it with the known rapidity of the development of some of the lower forms of animals and plants. If this be the case it is of the utmost necessity to preserve the water used for drinking purposes perfectly free from contamination with any suspicious matter; and this would appear reasonable so long as there is even a doubt upon the subject. But experience speaks for itself, for in those towns in which the purest water is supplied, epidemics are either unknown or are felt with very much less intensity. Thus it is stated that in Glasgow during the three epidemics of 1832, 1849 and 1854, when the source of the water supply was

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

the polluted river Clyde, the average mortality from cholera was 121·6 per 10,000 people, while in 1866 after the city had been supplied with Loch Katrine water, the mortality was only 1·6 per 10,000 of population. The epidemic which broke out in the village of Lausen, near Bâsle, Switzerland, in 1872, has proved that infected water may traverse a distance of more than a mile through earth without losing its power of causing disease. And this is not to be wondered at if we consider the germs of disease to be the eggs of low forms of animals or the spores of certain plants, whereas, if they consisted of organic, but not living substances, the probability is that they would be completely oxidized. Dr. Frankland, in a paper read before the Chemical Society, London, in 1868, gave a very striking illustration of this, which will best be given in his own words. "If the shell of an egg were broken and its contents beaten up with the water and thrown into the Thames at Oxford, the albumen would probably be entirely converted into mineral compounds before it reached Teddington; but no such destruction of the nitrogenous organic matter would ensue if the egg were carried down the stream unbroken for the same distance, the egg would even retain its vitality under circumstances which would break up and destroy dead or unorganized organic matter. Now, excrementitious matters certainly sometimes, if not always, contain the germs or ova of organized beings; and as many of these can doubtless retain their vitality for a long time in water, it follows that they can resist the oxidizing influences which destroy the excrementitious matter associated with them." The legitimate deduction from this is that a water to which infected matter has at any time gained access should be rejected for drinking purposes, no matter how much it may subsequently have been exposed to the air. How is it to be known whether a water is contaminated or not? No means are known at present of stating positively whether a water contains the germs of disease without physiological experiments which are undesirable, but from the constant association of germs with excrementitious matter we have a means of knowing whether a water is dangerous or not. Any water which can be proved to have previously been charged with sewage, ought to be rejected whether organic matter be present to any large extent or not at the time of examination. Chemical analysis supplies the means of knowing the previous history of the water, and though it will not say whether a water is disease-infected or not, it gives us the means of ascertaining whether a water is pure and undefiled or dangerous. For sanitary purposes it is not necessary to know the nature and amount of all the constituents of a water, but it is necessary to have some means of knowing the amount, relative or absolute, of fresh organic matter, as well as the amount of those mineral substances which result from the oxidation of organic matter. Excrementitious organic matter contains carbon, hydrogen, oxygen, and nitrogen and the products of its oxidization and change are water, carbonic acid, ammonia, and nitric and nitrous acids. Of these the only bodies available for the purpose of analysis are ammonia, nitric and nitrous acids. If we find considerable quantities of these substances in any natural water we know certainly that they have been derived from sewage matter. It must, however, be remembered that rain water always contains small quantities of these bodies, and therefore in estimating the value of a water, the average amount present in rain water has to be deducted from the amount found in the water under examination. Chemical analysis can also show the relative amount of present organic matter in different waters, and this is a point of great importance, for it shows how recent has been the contamination with sewage matter.

The accompanying tables give the results of analyses made in the Chemical Laboratory of the University of Tôkiô by Messrs. Ishimatsu, Takamatsu, and Takayama, senior students, under my direction. The sample of water from the districts supplied by the Kanda were collected on the same day, except the two first, and those from the district supplied by the Tama water were also collected on one day. The specimens of surface waters were collected on different days.

It will be convenient here to explain the meaning of the numbers given in the various columns.

1. *Solids*;—Obtained by evaporating 100 cubic centimetres of the water to dryness over the water-bath, great care being taken to guard against the admission of any particles of dust, and drying at 110° C. This includes besides mineral matter, such organic matter as has not been expelled during the evaporation.

2. *Chlorine*:—Estimated by means of a standard solution of argentic nitrate. The presence of chlorine is partly owing to spray which is blown by the winds from the bay of Yedo into the interior, and when in large quantity, may indicate contamination with sewage. Its determination is very important.

3. *Free Ammonia*:—Determined by distillation and estimation in the distillate by means of Nessler's re-agent All rain water contains free ammonia, but only in small quantities; when present in large amounts in water it usually indicates the presence of decomposing urea, and so points to sewage contamination. The presence of a considerable amount of chlorine in a water, together with a large amount of ammonia, will usually be sufficient to condemn a water on account of recent contact with sewage.

4. *Albumenoid Ammonia*:—Is determined by boiling with an alkaline solution of potassic permanganate, and estimating the ammonia in the distillate as in (3). All nitrogenous substances do not give off the whole of their nitrogen as ammonia, but that is a matter of little moment, since all that is required is to get comparative results. Urea, although giving off no ammonia when treated as above, is recognised with certainty by the presence of chlorine with which it is always associated in sewage. Although, therefore, the numbers obtained in this determination do not represent the whole of the nitrogen contained in the organic substances present in the water, yet when it is found that one water yields a large quantity of ammonia whilst another water yields only a small quantity, when treated with alkaline permanganate the inference is justly drawn that the former contains a larger quantity of nitrogenous organic matter than the latter. Before making this determination the free ammonia is, of course, expelled.

5.—*Oxidized Nitrogen*: Determined by first expelling the free ammonia present and treating the residual water with caustic potash and powdered zinc. The nitrates and nitrites are reduced to ammonia, and the amount of ammonia liberated is ascertained as before.

When an organic substance containing nitrogen is exposed to slow oxidation, especially in presence of basic substances, the nitrogen forms nitrous and nitric acids, and thus the determination of the nitrogen existing in a water in this form is a measure of the amount of nitrogenous organic matter which has previously been contained in the water and has undergone oxidation. In some cases it may be derived from soil containing animal organic matter in a state of oxidation, through which the water has passed, but in either case it tells the past history of the water. Although the presence of nitrates and nitrites in a water is not of itself injurious, it is a sign that the water has passed through conditions which might permit it to become infected with the germs of disease, and therefore when found in any quantity in water, such water ought not to be used for drinking purposes at any time, but especial care should be taken during the prevalence of an epidemic. At such times it is the duty of an enlightened government to forbid the use of such water, and to supply the district with pure water at the public expense.

6.—*Total Mineral Nitrogen*: By this is meant the amount of nitrogen existing in the water after deducting that contained in average rain water, in the form of ammonia and oxidized nitrogen. It does not include the "albumenoid ammonia." It, therefore, expresses the amount of that element which has been taken up by the water in passing through impure soil, or by having come into contact in some other way with animal excreta. This number, therefore, expresses the actual amount of contamination with which the water at one time or another has been in contact. Dr. Frankland, in his reports on the water supplied by the eight London water Companies made for the Registrar General, has introduced the term "Previous Sewage Contamination" to express the quality of a drinking water, and this number will be found in column

7.—It is calculated in the following way:—Taking the amount of combined nitrogen in 1,000,000 parts of rain

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

water as =0.32 parts, this number is deducted from the sum of the nitrogen present in the form of free ammonia and oxidized nitrogen. Then, as average filtered London sewage has been found to contain 100 parts of combined nitrogen in 1,000,000 parts, (=1 in 10,000 parts) we can express the amount of sewage with which the water has been in contact by the following formula—10,000 ($N + N^1 - r$), when N expresses the amount of nitrogen existing in the form of ammonia, and N^1 that present in the oxidized state, and r is the total amount of combined nitrogen in rain water.

It will be understood from what has been said under the head of oxidized nitrogen, that this number does not express the amount of organic matter actually present in the water, but only that which has been completely oxidized, and as there are many causes which lead to a removal of the nitrates and nitrites from a water, such as the presence of growing plants, etc., the number so obtained can only be regarded as the minimum amount of impurity. In order to form an opinion as to the amount of present impurity, we must look to the column headed albumenoid ammonia, and the number there given will show whether the contamination is recent or old.

8.—*Calcium Salts.* This indicates the amount of carbonate of calcium or other soap destroying salts contained in the water.

Tôkiô is supplied with water from three different sources. The city proper, that is the part bounded by the Sumidagawa and the bay of Yedo on the one side, and by a line extending from Kanasugi-bashi, Shiba, to Toranomon, thence by the outer moat of the castle and the Kandagawa as far as Riogoku-bashi, is supplied by means of pipes which bring water from two sources, and except in the elevated districts of Bancho and Suruga-dai, surface water is not used. The rest of Tôkiô outside the castle walls, and the districts of Honjo* and Fukugawa on the other side of the river, use only surface water. The two kinds of water which are distributed to the different parts of the city are derived from the Tamagawa, and from the Kanda. The point at which the water is taken off from the Tamagawa is about 12 *ri* from Tôkiô, and water is conveyed to the city in an open canal to Yotsuya, where it enters the city pipe and discharges at Reiganjima. It supplies the whole of the city south of a line drawn from Yotsuya to Hitotsu-bashi, from this to Wadagura-go-mon thence to Kaji-bashi, and from this to O-hashi, following the canal north of Hachobori and Reiganjima.

The source of the Kanda water is about 4 *ri* from the Dai Gaku, and consists of three ponds, but a branch canal of the Tamagawa joins it on the way, so that the two waters are mixed in about equal quantities. It enters the city pipe at Sekiguchi, Koishikawa, and discharges at Riogoku-bashi and Kio-bashi. The remainder of the city, with the exception of Bancho and Surugadai, which use surface water, are supplied with Kanda water. I am indebted to Mr. Matsumoto, Engineer to the Tokio *Fu*, for the above particulars, and also for information respecting the best points from which to take samples of the water of the two supplies.

Tamagawa Water. (Table I):—The water from Kojimachi may be considered as the raw material which is used to supply the district, and from the results of analysis it will be seen to be of good quality and well fitted to supply the wants of a large town. Although it is not absolutely pure, the amount of impurity is so small that it proves the previous contact with sewage to have been of very slight extent. And the quality of the waters taken from Toranomon, Kanasugi-bashi (Shiba), and Hachobori approach it in purity, though the former appears to have been slightly contaminated by some local impurity. The two remaining specimens of this water, however, taken from Tsukiji and Reiganjima contain very considerable amounts of impurity, as is indicated by the large amount of chlorine and free ammonia. The chlorine is probably derived in part from the water of the bay, but that the increase is not wholly due to this circumstance, is shown by the presence of a large amount of ammonia, which can only have been derived from the decomposition of animal matter. In these low lying districts where the flow of the water is smaller, there must be a much greater tendency for impurities to leak in through the joints of the pipes than in the higher districts, and in this way the greater amount of impurity is best accounted for. But, the pipes being made of wood, in time become saturated with water and a process of diffusion must occur between the water in the pipe and the impure liquids outside. This diffusion will take place throughout the whole system of pipes, but will be much more marked in those districts towards the end of the supply where the flow is more sluggish.

Kanda Water. (Table II):—The specimens taken at different points of the district supplied from this source show a progressive increase of impurity as the distance from the source is greater. At Sekiguchi (Koishikawa) where it first enters the city pipes, it equals in purity the water derived from the Tamagawa, and if its purity could be preserved, no exception could be taken to the water supplied to the city of Tôkiô.

But the results of analysis show that this is not the case. It is very interesting to observe how nearly regular the increase is, starting from Koishikawa. The three first samples are very pure, containing small amounts only of solid matter, chlorine, ammonia and oxidized nitrogen, whilst those samples taken from the centre of the populous district supplied with this water present much larger quantities of each of these constituents. The two last specimens taken from near the end of the supply, at Kakigara-chô, and Yonezawa-chô (Riogoku-bashi), have evidently been very largely contaminated with organic matter, the amount of albumenoid ammonia being very large, whilst the evidence of previous pollution is also very strong. This comparison of these various waters, therefore, confirms the remarks made in connection with the Tamagawa water. It is quite evident that the use of wooden pipes is not sufficient to preserve the quality of the water, and as such pipes are proved capable of admitting organic contamination into the water supply, there is no reason to suppose that they will exert any especial exclusive action on the disease germs which may surround them. Imagine a few isolated cases of any zymotic disease breaking out in any part of this thickly inhabited district, and consider how impossible it is to prevent some of the excreta of such patients finding its way into the soil and so into the water supply, and it will be evident that such germs will spread like wildfire through the whole of the district supplied subsequently by such water. In such a case the water, indeed, acts as a carrier of the disease, and its use is even worse than that of the water from surface wells, which at most supply only a few houses. The natural inference to be drawn from these analyses is that, the water being good to start with, proper means should be taken to preserve its purity by the adoption of some system which will prevent the introduction of impurity from the soil, that is, by replacing the wooden pipes by others made of some impervious material.

Table IV. is given, compiled from the results published by Dr. Frankland in his paper read before the Chemical Society in 1869, and from analyses given by Professor Wanklyn in his treatise on water analysis, in order that a comparison may be instituted between the water used in Tôkiô and that supplied to London, and some other places in England. It will be seen that the Tôkiô water at its source is greatly superior to any of the London waters, but that it is inferior to the water supplied to Manchester and Glasgow. The London supply is, however, confessedly imperfect, and agitation is at the present time being made for its replacement by water from some purer source. The waters of Manchester and Glasgow are extremely pure, being derived from uncontaminated sources and not being permitted to come near any impurity. The character of these waters, also, is preserved by their being transmitted through impervious pipes, and thus the water taken from every part of the system will have the same composition.

Surface Waters:—(Table III). It is, however, in the surface water that we may expect to find the largest amount of impurity, for, from its origin it passes through soil charged with all sorts of organic matter, and collects in some basin, from which it is obtained by wells sunk through the earth till they reach the level of the water. It will be obvious that the deeper the water sinks the greater will be the amount of impurity taken up by it, other conditions remaining the same, and this is for the most part borne out by the exami-

* Honjo is to some extent supplied with Tamagawa water brought over in boats from Reiganjima.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

nations made of the surface water from different parts of Tôkiô. In all except that from Mukojima the number expressing the "previous sewage contamination" is very high, while the amount of "albumenoid ammonia" is comparatively small, not greater than that found in most specimens of London water, except in the waters from Honjo and Fukagawa. The use of the latter water was, I believe, condemned by the Tôkiô *Fu*, during the prevalence of cholera in that district, but without actually closing the wells it would be difficult to ensue perfect obedience to such an order.

The result of the analysis of these two waters shows that there existed good reasons for closing the wells of the districts, the amount of organic matter actually present being quite abnormal. The large quantity of chlorine contained in the water from Fukugawa may have been derived from contact with sea water, but the presence of ammonia and the large amount of solid residue suffice to condemn its use for drinking purposes. It will, also, be noticed here that the numbers expressing the "previous pollution" of the last two waters are comparatively small, showing that the contamination is of more recent date than that of the other wells, the time which has elapsed since the pollution, not having been sufficient to effect the oxidation of the nitrogenous animal matter.

The purest of these surface waters is, undoubtedly, that from Mukojima, which shows very little more impurity than is contained in the Tamagawa or Kanda waters at their sources. The water is obtained here by digging a hole into the ground and sinking a bamboo pipe, when the water rises to within a short distance from the ground. It is thus a species of Artesian well, and as its resevoir is probably situated some considerable distance below the surface, to which sewage has less opportunity of gaining access, its high degree of purity is explained.

The most impure water I have examined is that collected from Surugadai, and as the results were so extraordinary, a second sample from the same well was taken about ten days after the first sample, and analyzed with similar results. There seems to be no doubt, therefore, that the results obtained express the ordinary quality of the water used in this part. The water was 45 feet below the level of the ground, and the resevoir would thus seem to be nearly at the same level as the Kanda-gawa.* On account of its great depth and from the populous character of the neighbourhood, it is reasonable to suppose that it receives the drainings from all the houses on the hill, and in this way its unwholesomeness would be fully accounted for. It is scarcely necessary to say that its continued use as a drinking water is exceedingly dangerous, and it should be replaced by the purer Kanda† water which is within easy reach.

I regret that there has been no opportunity of examining samples of surface waters from a greater number of localities, but they would probably nearly all show similar characters. The results of these analyses may be thus expressed:—

1°.—The waters supplied to the city are originally good, but become deteriorated by passage through wooden pipes.

2°.—Most of the surface waters are dangerous, and some are exceptionally bad.

(For Tables see next page.)

* The depth of the water in wells in various parts of Suruga-dai was measured, and it was found that, roughly, the depth was greatest at the highest points of the hill, affording probable evidence that the whole hill is supplied with the same water.

† It must be borne in mind that the Kanda which supplies the drinking water differs from the Kanda-gawa.

According to the *Diario de Manila* of the 30th October last, the Dutch Geographical Society has just received a report of the Expedition sent to explore the interior of the island of Sumatra. The Expedition left Sadaray on the 15th of May last, and under great difficulties made their way through the jungles into the centre of the island, the soil of which was completely virgin. In the centre of the island, as it was supposed, there were large mountains thickly covered with vegetation, and impenetrable even to the sun's rays. The inhabitants of the interior are not numerous, and are of the Malay race, the same as those who inhabit the coast of Sumatra.—*China Mail.*

THREE ANCIENT JAPANESE LOVE SONGS.

From the 13th Vol. of the Mañefushiu,

(Published in or about A.D. 753).

FIRST LOVE SONG.

Here on the hilly brink I stand
Of bright Hatsúse's [1]sparkling stream;
And gaze upon the other strand,
Where stands the maid of whom I dream:
To see her,—oh! what gladness!
But not to meet,—what sadness!
What shall I do? how cross the rippling stream?

Oh! that a tiny boat were mine,
Lacquer'd all o'er with gold and red!
Oh! that some tiny oars were mine,
With diamonds and pearls inlaid!
Then would I pass the river,
And dwell with thee for ever
In rapturous joy, mine own, my sweetest maid!

SECOND LOVE-SONG.

(The words "hie me to the busy street," etc., in the following song refer to an old superstition. It was supposed that the chance expressions caught from the lips of the passers-by would answer any question to which it might otherwise be impossible to obtain a reply. This was called the "*Yufu-ura*," or "evening divination," on account of its being practised in the evening.

He promis'd, e'er he bade adieu,
To gather on far Kíshu's strand
Some pearls the waves do bring to view,
And lay them in mine hand:—
And now he's gone away
Far o'er the Lovers' Hills[2] this many a day.

"When will he come?" I cry aloud,
And hie me to the busy street,
If, haply, from the passing crowd
Some news mine ears may greet:—
And, as I look around,
These words prophetic through the gloom resound:

"My pretty maid! the lover dear
"For whom thou sighest comes not yet,
"Because, among the riplets clear
"And where the wild waves fret,
"He's gath'ring many a pearl,
"To bring them back to his own loving girl;

"Seven days, at most, will yet elapse
"Before thou may'st thy lover see;
"But, an he haste, two days, perhaps,
"Might bring him back to thee:—
"Take heart, my pretty maid!
"For the dear absent one be not afraid!"

THIRD LOVE-SONG.

He comes not,—'tis in vain I wait;
The cranes' wild cry strikes on mine ear;
The tempest howls, the hour is late,
Dark is the raven night and drear:
And, as I thus stand sighing,
The snow-flakes round me flying
Light on my sleeve, and freeze it crisp and clear.

He will not, nay! he cannot come;
Yet trust I still that we may meet,
As sailors gaily sailing home
Trust in their ships so safe and fleet;
Though waking hours do hide him,
Grant I may stand beside him
To-night in dreamland holding converse sweet!

B. H. C.

[1] There being little or no tonic accent in Japanese, I have laid the stress where it best suited the necessities of the metre.

[2] Two mountains in the province of Yamato, called Mount Lover and Mount Lady-love. On the occasion of a visit to that part of Japan in the summer of 1875, the guide pointed out to me one of these mountains, and said that the other had been washed away.

ASIATIC SOCIETY OF JAPAN.

A General Meeting of the Asiatic Society was held at the Tôkiô Dai Gaku on Saturday, 24th November, Sir Harry S. Parkes, President in the chair.

The minutes of the previous meeting were taken as read.

Professor Ayrton announced on behalf of the Council, that it had been proposed to alter rule 25, by which it was provided that 10 copies of a paper should be given to the author, and in accordance with standing regulations, Dr. Divers, Professor Chaplin, and Dr. Faulds were appointed a committee to confer with the Council on that subject. The election of the following gentlemen as new members was then announced, Dr. Divers; Professor Gerry; Captain James.

Dr. Faulds remarked that since his note at the last meeting on the waxy bodies which he considered to be the undeveloped female of an aphis, he had discovered a winged aphis which was very probably the sought-for male.

Professor Atkinson then read his paper upon the "Water Supply of Tôkiô."

At its conclusion Professor Chaplin said:—The paper which has been read is of great interest to the people of Tôkiô just at this time; and it is valuable to engineers the world over, because it shows that wooden pipes are unsafe to carry water for domestic purposes. It has been known for a long time that metal pipes are liable to injure the water running through them; but this is the first investigation, which he has seen, which seems to prove that wooden pipes have the same failing. He did not think it probable that there is any flow of contanimated water into the pipes through leaks; because the pipes are carefully made and generally the head of the water inside the pipes is greater than the head of the water outside. The water works of Tôkiô are, on many accounts, remarkable. When they were built, they were probably the most extensive works in the world. The first works for supplying the people of Tôkiô with water were made to carry water from a hill near Akasaka to a section which had been formed by filling in a marsh on the shore of the bay: probably this is the place now called Tsukiji. When these works were built the city was very different from the present city. Old maps show Asakusa as a separate village and the place where Tôkiô Dai Gaku is, as a marsh. As the city extended, the supply of water was obtained from other streams flowing through the city, but all these works have now disappeared. The Kanda water-works were probably built about 1650. They are supplied by three small ponds which lie west of the city. These ponds are shallow and nearly filled with water-plants. The people living near them say they are supplied by springs, and that the water is generally cold in summer. The greater part of the water in the Kanda water-works comes from a canal which connects them with the Tama canals. The Tama water-works were built in 1653. They bring the water from the Tama river at a point where that river leaves the hills. At this place the water seems to be very pure and there is an abundance of it. In mid-summer the canal takes nearly all the apparent flow of the river, but, as the bed is formed of washed gravel, and as there are always pools of clear water below the dam, it is probable that a large part of the water runs below the top of the gravel. At this point, Hamura, there is a low dam across the river, and the banks are protected in such a way as to show that during high water the river is a very powerful stream. The canal is almost wholly in excavation,—in fact there is but one embankment, which is near the limits of Tôkiô. At one place the canal runs through a slight depression in the surface of the plain, and the water now fills this. When the canal was built it was believed that the cherry tree had the power of abstracting poison from water; so, many trees were planted around this artificial lake. These trees are still standing. All along the canal are villages which draw their supply of water from the canal and, in many places, are side canals which drive flour mills. It has been found that in summer 150,000,000 gallons of water leaves Hamura daily; but of this quantity only about one third enters Tôkiô through the Tama water-works. How much comes through the Kanda water-works, he did not know; probably as much more. Considering the fact that when these canals were made the Japanese had no shovels or carts, in fact none of the tools of the modern navvy, and that all the earth had to be carried out of the canal either in baskets or on mats, their construction must certainly be considered wonderful. A rough calculation shows that more earth was moved in building them than in building the railroad from Tôkiô to Yokohama. The records show that the cost of building the Tama water canal was only 9,000 *yen*, of which the Shôgun paid 8,000 and the engineers raised 1,000. The cost per cubic yard must have been less than one *sen*, or about a twentieth of what it would cost now. The engineers of the Tama canal were two head men of the village of Hamura. They received as a reward a pension of 200 *koku* of rice. In the city the water is distributed through wooden pipes. The large pipes are made of several planks, two and a half or three inches thick, spiked together. The small ones are made of square timbers, which are hollowed out so as to form three sides of the pipes, and on these planks are nailed to form the fourth side. All the joints are caulked with cedar bark. The water is not carried into the houses but runs into wells. Honjo is supplied with water by boats, which obtain it from the pipes in the other parts of the city and from the rivers at points above tide-water. The cost per gallon is about one *rin*.

The length of the Yama canal from Hamura to Toranomon is 28.9 miles; of the Kanda canal 14 miles. Connected with the Tama canal are 30.3 miles of pipes and with the Kanda canal are 29.1 miles. These pipes supply 8,000

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

wells. The engineer of Tokio *Fu* has designed works in modern style to supply, not only the parts which are now supplied, but also the parts lying beyond the Sumida river and south of the castle. He proposes building reservoirs in the city and raising water to the high points by steam power. The city is spread over so much ground that the cost must be unusually large. Professor Atkinson's paper shows the necessity of improving and extending the present system, and, if no other plan is possible, it is doubtless the duty of the authorities to go to the great expense of carrying out the engineer's plan.

Dr. Faulds said: I have to express my thanks for Professor Atkinson's valuable researches the accuracy of which on some points I believe I am able to confirm from observations made in another field of study and by quite different methods. He has shown that in Odawara-chô and in Suruga-dai districts that water is exceptionally impure. With the first named district I am exceedingly familiar, and medical experience has not only led me to form independently the same opinion as Professor Atkinson, in regard to the organic impurities of the water, but several groups of cases have been carefully traced up to an evident origination from particular wells in that district. I am not quite prepared on the evidence before us to accept as final the very ingenious and suggestive explanation proposed by Professor Atkinson, for the ascertained fact of the increasing impurity of the water supply as it nears its final outlet. Where actual holes do not exist I question if diffusion through the water-logged sides of the wooden main would suffice to explain altogether the extensive contamination that seems to take place. This part of the investigation seems still to require experimental verification, but meanwhile I would venture to suggest a very much simpler explanation. The wells, as I have seen from examination of certain apparently poisoned ones, are supplied by a bamboo pipe leading off from the main which is always pervious and immersed in the water of the well. Now if any impurity should enter the well, it seems to me that part of it would naturally regurgitate by the open supply pipe into the main, and thence be distributed in a highly scientific manner, though perhaps too dilute to be markedly injurious, over the remaining area of supply. An example of the danger thus arising may be interesting. Two people living in Odawara district, near the outlet of that supply which Professor Atkinson shows to become progressively impure, sicknened suddenly of cholera and died in a few hours. I found that both had drunk out of one well and out of that well alone. This well was connected with the main in the manner I have described. Its walls were decayed and admitted visibly of leakage. Separated by a few inches only was a deep trench filled with putrid stagnant filth from the houses, which had not, an official told me, been cleaned for years. The lining of this gutter was of decayed wood also. A few feet along, and *leaking visibly* into the gutter, was a public urinal and privy—not cleaner than the average ones in the slums of Tôkiô. Some of the filth from that place must almost certainly have got into the well, and from thence I think into the main again. That this water, after all, was not to every one absolutely poisonous, is shown by the fact that the minor official accompanying me, who differed somewhat from my estimate of the safety of this arrangement, took a good draught of this beverage and I am happy to say survives. The danger, on the other hand, may be shown from the fact that the adjoining public privy had a very clear history of infection from choleraic discharges, and during an epidemic few of these places can escape infection. Cholera, however, is not the only disease which may thus be propagated. Diarrhoea, dysentery and typhoid are persistently prevalent in this district, and these have a close relation generally to the water supply. Further, typhoid cases seem to me clearly to have originated by contamimated water from particular wells in this part of the city. Professor Atkinson's examination of the water at Suruga-dai has yielded results quite as valuable from a medical point of view, and results which to most are quite unlooked for and surprising. I may state, however, that an outbreak of a disease closely related to diphtheria in many of its features seemed to me unmistakeably to originate in Suruga-dai. It spread thence with a pretty clearly connected history of contagion from individual to individual over a large part of Tôkiô; Japanese and foreigners were equally and in several cases fatally affected. It was traced up to Suruga-dai, and with the utmost efforts could not be traced beyond there. As cases are even now appearing of a similar kind, I have had my attention directed very closely to this spot and inspected roughly one or two of the wells. The water did not appear very wholesome, certainly, but my doubts were somewhat stifled by the general impression prevailing everywhere that the water in such a situation must be better than in other parts of Tôkiô. The facts laid before us to night, and arrived at without any knowledge of those I now mention, throw back a flood of light on this outbreak. I am aware that this disease has been called diphtheria, but as the characteristic membrane of that disease was wanting in all the cases seen by myself, and Japanese doctors who have spoken to me on the subject, I still hesitate to apply this term to these cases. It is a disease, however, I have no doubt depending on a microscopic living and growing poison, which can be transferred from one favourable soil to another by water, although it may likely enough avail itself also of other means of diffusion. On one point not alluded to in the paper I would like to make an enquiry. I have been frequently struck with the prevalence of symptoms amongst the Japanese which strongly resemble, and even in some cases exactly simulate, those produced in chronic copper poisoning. Has Professor Atkinson tested for copper? Of course, if these symtoms are due to copper, that might perhaps come from the vessels used for cooking, etc, which are frequently made from that metal. Such an accident happened to myself when passing through Kiôto. In a well known Japanese hotel much frequently by foreigners and well conducted, some soup was presented to me so strongly impregnated with copper salts that it could not be used. It would be interesting, however, to know whether even in the water-supply there may not be a faint trace of copper; perhaps, it might be influenced by the rain fall at the sources from which the water is drawn. I think Professor Atkinson deserves the thanks of all for bringing his conclusions so clearly before us. Nothing could illustrate the importance of a good, unpolluted water supply so well as the case of London during the cholera epidemic of 1854, and that of a poisoned well in Rochester (U.S.) last year. In a certain district of London two water companies supplied alongside of each other, families living under precisely the same conditions, except that the water supplied to the one portion was drived from a higher reach of the Thames than the other and was much freer from sewage. Amongst these people the mortality from cholera was very slight. The water of the other company, drawn from a source near the city, was therefore impure from entrance of sewage. The families who used this water suffered to an extraordinary degree, and only one explanation seems available. The case of Rochester was similar but only one particular well was suspected. The illnesses among families who partook of its water were very numerous, while those living in the same neighbourhood, but using other wells, almost entirely escaped. It is now believed that many of those diseases which are so far spreading and fatal are due to the growth and diffusion of living seeds or germs, far too minute in many cases to be seen by any miscroscopic power we have yet been able to obtain, but some of them have been seen and others may yet be. It is, meantime, a safe and practical conclusion that water which is contaminated with filthy and infectious matter, may serve to transport far and wide these minute living sources of disease and death.

Dr. Divers wished to congratulate the author of the paper on the opportunity that had been afforded him for making a comprehensive investigation into the nature of the water supply of the city, and on the thoroughness with which he had availed himself of it. His own experience had been very limited, but he might mention that the results which he had obtained with the water at Tora-no-mon supplied to the Kobudaigakko, agreed with those of Professor Atkinson—the quantities of chlorides, ammonia, and nitrites being inconsiderable, and impurities readily oxidizable by acid permangnate solution absent. The non-scientific public were apt to be incredulous as to the significance of such small

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

quantities of inpurities as the chemist found in potable waters, but the experience of medical men had placed it beyond resonable doubt. Respecting the quantities of nitrates and nitrites in waters, a statement had lately been made in England by Professor Lunge to the effect that by the method usually followed, and just described by Professor Atkinson to the meeting, the amounts of these substances were under estimated. Water was sometimes found, in summer time especially, to acquire an unpleasant taste, which excited distrust as to its wholesomeness, but this taste was often due only to the presence of minute quantities of substances derived from vegetable mould, and had not the evil significance attached to evidence of animal contamination of the water. He thought it quite possible that the water supplied through wooden pipes might become contaminated in its course by diffusion, through the joints of the pipes, if not through the substance of the wood. Although not connected with the subject of water-supply, still as bearing upon the dissemination of disease, he might point out the possible dangers of the careless and offensive method of portage of ordure from the city to the country districts. Direct experiments with chemical solutions in a state of effervescence had proved, that during the putrefaction of liquid ordure, particles must become suspended in the air and remain so for a considerable time, and thus be liable to be carried to great distances by the move- ments of the atmosphere.

After some observations from Professor Ayrton and Dr Veeder.

Professor Atkinson briefly replied to some of the remarks made by previous speakers. He had attempted to gain some information respecting the parts of Tôkiô considered to be healthy or unhealthy, but had failed to get anything very definite. It was generally agreed that the districts of Yotsuya and Koishikawa were healthy, as well as Suruga-dai, whilst Honjo was considered to be unhealthy. That Suruga-dai should be a healthy district was contrary to the conclusions drawn from the analyses of the water, and Professor Atkinson, therefore, felt gratified that his results were corroborated by Dr. Faulds, especially as his opinion was derived from utterly different observations. With respect to the pollution of the water being caused by infiltration into the wells and not by diffusion through the pipes, Professor Atkinson considered that although regurgitation would probably occur, yet its extent would scarcely be sufficiently great to cause any very marked increase of impurity, and pointed again to the circumstance that the amount of impurity increased as the distance traversed by the water was greater, whereas, if the contamination took place in the well itself, the distribution would be irregular.

The President closed the meeting by remarking on the deep interest of the subject, and the useful manner in which it had been treated by Mr. Atkinson and those members who had joined in the discussion. The former had clearly demonstrated in his paper how important it was to the health of the people of this large city, that they should be furnished with better water than that which they now drink, while Mr. Chaplin had given most interesting details respecting the history and working of the present water system of Tôkiô. He had also shewn that an ample supply of the purest water was within easy reach, and that it was only owing to imperfect mechanical arrangements that such water was not conveyed from that fine stream—the Tamagawa—to the doors of the people entirely free from contamination. Allusion had been made in the paper to the new water-works of Glasgow, which were believed to be the most successful enterprise of the kind yet executed in the United Kingdom. These works had been laid out on a scale which would admit of a daily supply of fifty millions of gallons being furnished to a population of about 450,000, though twenty-six millions of gallons had been found sufficient to meet their wants. Mr. Chaplin had informed us that one hundred and fifty millions of gallons were drawn off daily from the Tamagawa, a fifth of which, however, was only brought to Tôkiô and supplied to 350,000 people, or less than half of the population of the city. It would be seen, therefore, that the present supply from the Tamagawa, having regard to the number of people who used it, was on a scale scarcely inferior to that of Glasgow, although the large manufactories of that city created a particular demand that was not known at Tôkiô. As the supply from the Tamagawa could be increased to five times its present amount there was no question as to its sufficiency, and the only difficulty which lay in the way of placing Tôkiô in as good a position, probably, as any other city in the world, appeared to be the cost of substituting iron pipes for the existing defective wooden ducts. The estimate of a million and a half of dollars was a serious outlay, however, for the Japanese Government to have to face, and if the Committee of members who had undertaken to pursue the investigation of the subject could suggest any means for reducing this estimate without detriment to the quality of the water, they would render an important service to the Government and to the people of Tôkiô. He was glad that such a practical subject had been brought before the Society, and he particularly recommended it to the attention of the members.

Dr. Faulds hoped that experiments might be carried out to put to the test Professor Atkinson's theory of contamination by diffusion, and he suggested that Professor Atkinson, Dr. Divers, and Professor Chaplin should be asked to give the subject their attention.

The President thought the suggestion a good one, and proposed that Dr. Faulds be added to the number, and that the Committee have full power to add to their number.

The meeting was then adjourned.

YOKOHAMA RACING ASSOCIATION.

AUTUMN MEETING.

OFF DAY.

Tuesday, November 27th, 1877.

Yesterday the Association finished up their Autumn meeting by the Bettos' Races, which were postponed on Saturday last owing to the state of the weather. The course was in a heavy condition.

THE MAYEDA BASHI CUP.—Value $50. For all Ponies which have run at this Y. R. A. Meeting. Winners of two or more races excluded. Winners of one race weight for inches: non-winners allowed 7lbs. To be ridden by Japanese or Chinese bettos who are recommended for good conduct. Three-quarters of a mile. 1st Pony 70, 2nd 20, 3rd 10 per cent.

Mr. Robertson's *Sport*, 10st. 5lbs..... 1
Don Carlos' *Telephone*, 9st. 9lbs..... 2
Mr. Robertson's *Bravo*, 10st. 5lbs..... 3
,, Fairplay's *Mongolian Wolf*, 9st. 9lbs..... 0
,, Hugo's *The Minister*, 9st. 12lbs..... 0
,, Sinbad's *The Consul*, 9st. 9lbs..... 0
,, Sinbad's *The Sheik*, 10st. 2lbs..... 0

Bravo had by far the worst of the start. *The Minister* led at the fall of the flag. *Sport* went to the front at the half mile and was never afterwards headed, but increased his advantage by several lengths down the straight and won easily. The whip was very freely applied during the race, as may be imagined. Time 1 min., 43½ secs.

Race for Japan Ponies. Three-quarters of a mile. Weight 9st.

Mr. Ola's *Mohstotz*..... 1
Messrs. Takasaki, Kataoka and Fujinami's *Sannohé*. 2
Mr. Bencen's *Board of Health* 3
,, Verisopht's *The Convert*..... 0
,, F.'s *Doctor*..... 0
,, Verisopht's *The Moor*..... 0
The Barons's *The Rebel*..... 0

There was one false start when *The Moor* ran some distance before he could be stopped. On the second attempt all got well away but the *Doctor*. At the five furlongs *Mohstotz* took the lead, and from that point had the race all his own way. Time 1 min., 39 secs. *The Moor* bolted into the rails soon after starting and striking his head against a post fell very heavily, and was so injured that he had to be shot. The betto riding him was stunned and badly shaken, but recovered sufficiently to be sent to the hospital.

For China Ponies. Three-quarters of a mile. Weight 9st.

Mr. F. Mason's *Liddesdale*..... 1
,, Robertson's *Favori* 2
,, Sinbad's *The Dwarf*..... 3
,, Earnest's *Ruethin* 0
,, Fairplay's *Mongolian Beglerbeg*..... 0
,, Robertson's *Bravo*..... 0
The Baron's *Tennessee*..... 0
Mr. Hugo's *Antidote*..... 0
,, Earnest's *Bebé*..... 0

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Liddesdale immediately took the lead, followed by *Bébé*. At the trees *Favori* ran up second and challenged the leader, but could never catch him. *Beglerbeg* ran wide at the turn and striking the outside rails was upset, but without injury to himself or rider. Time, 1 min., 40 secs.

MATCH.—One and a quarter mile. Catch weights.

Mr. Fairplay's *Mongolian Wolf*..... 1
,, Don Carlos' *Telephone*..... 2

Telephone led round to the half mile, where the *Wolf* took the lead, and the latter coming away down the straight won without any difficulty. Time 3 min., 1¼ secs.

Law Reports.

IN H. B. M.'s PROVINCIAL COURT, KANAGAWA.

Before H. S. WILKINSON, Esq., Acting Law Secretary.

PAOU SUNG *vs.* HENRY MILLS.

Friday, November 23, 1877.

This was a claim of $19, balance of wages.

Plaintiff, a Chinaman, residing at No. 172, Yokohama, said: On the 5th February, on defendant opening a new house, I entered that house as his servant. I had previously been a long time in his service, but as I was not paid, I had left, When plaintiff took his new house, he asked me to come back, and I agreed for $8 monthly salary I served 5 months, and have received $21, which leaves $19 due to me.

George Henry Thomson, of No. 179, Yokohama, sworn: I remember when the Chinaman was employed. It was on the 5th. March; he was promised $5 a month. On the 27th July he told the mistress he wanted $5 to buy some clothes. The money was paid him, and the next day he left. On the 5th instant he returned and asked the mistress to take him back.

Charles Lester, of No. 179, Yokohama, sworn: I was present when the plaintiff was engaged. He was promised $5.

Henry Mills, of No. 179, Yokohama, sworn: I am the defendant; this boy was away from me about 14 months. On the 5th March he came and asked to be taken back He was told he might come back at $5 a month, and he accepted.

The Court ordered defendant to pay costs with $3.00, and to pay plaintiff $1.70, being 4 months' 21 days' wages at $5 per month, or $23.60, less $31 90, already paid.

GUSTAVE LECHAT *vs.* A. HOUSEAL.

Plaintiff who is a merchant in Vladivostok, asked the assistance of this Court to comple defendant to comply with a judgment rendered in the Police Court at Vladivostok, on the 25th August last, by which defendant was ordered to pay to the plaintiff the two amounts of respectively $71, and $75.

Mr Montague Kirkwood appeared for plaintiff.

Defendant did not appear, either in person or by Counsel.

As no summons had been served upon him, the case was adjourned.

Tuesday, November 27, 1877.

Thomas Bell, who, on the 23rd instant had been charged by his wife, Cemaris Bell, with assault, surrendered to his bail.

Mrs Bell now withdrew the charge, and the case was dismissed.

Wednesday, November 28. 1877.

NOGUCHI YAHACHIRO *vs.* H. COOK.

This was a claim of $300, balance of the purchase-money, $700, for three spars sold by plaintiff to defendant, and of which $400 had been paid.

Plaintiff appeared by counsel; defendant appeared personally.

Defendant said: I bought the three spars for masts for the *Delta*. I paid $400 on taking delivery. When I commenced to work them, I found them perfectly decayed at the core and entirely useless to me. In last July I met plaintiff at Yokoska; I then told him that I would not pay him any more money, on the contrary that he he ought to pay me back my money and take back his spars. He promissed to do so, but I have never seen him since.

As counsel for plaintiff wanted to produce witnesses, who were not present in Court, the case was adjourned until Wednesday, the 5th December, at 10 a.m.

Thursday, November 29, 1877.

FUKUZAWA KOJIRO *vs.* THOMAS ROSE.

(Adjourned from the 15th instant.)

This was a claim for $488.00, with $1,000.00, damages; altogether $1,488.00.

The plaintiff stated in his petition that in July, 1877, he received an order from the Mining Department for 144 steel hammers; he contracted for them with defendant, and deposited $50.00 as bargain money. The hammers were made, paid for, and delivered to the Department, but all with the exception of two proved to be made of iron, only conted with steel. They were consequently rejected, and the plaintiff suffered severe loss.

Defendant's answer was that he never contracted with this plaintiff. He had made a contract with one Kinekuneja Mitsujiro about 144 hammers; he had made them all with the exception of two, which he had imported. The hammers were made in the usual way, the poll of iron and the face of cast steel, or what is known in the trade as cast steel hammers.

The plaintiff appeared by counsel, Nakayama Tameyoshi: defendant appeared personally.

Plaintiff deposed: In July last I received an order from the Mining Department for 144 hammers, and I went to Mr Rose, who showed me a sample; I told him that that would do, and I ordered the 144 hammers from him. At first I was told that they would be ready within a week, but when I went for them they were not ready. When I represented that I should get into trouble if the hammers were not ready, Mr Rose told me he had two hammers in the house, which he gave me, and which I carried to the Mining Department. A week after I went again to Mr Rose, I received the hammers. I sent them all to the Mining Department, and asked that they might be examined, whereupon I was told that they were of a quite different quality from those I had first brought. and they were not of steel, they could not be accepted. I was besides informed that as the hammers were not according to the sample, and this was a government business, I had made myself liable to a fine. I then communicated with Mr Rose, who replied that he knew nothing about it and would not listen to what I said. I asked him to take the hammers back, and as I could not make myself understood in English, I wanted one of his employés to act as my interpreter, and went to the workshop, where the native workmen were, to whom I told the defects of the hammers.

To defendant: I and my brother went together to your house. My brother is in Tôkiô to-day. "Kinekuneja" is the name of my firm. I have had several contracts with the Mining Department. I did not tell the Mining Department that the hammers should be English made. The reasou why the hammers were rejected was that they were different in quality from two first. I did not tell the Mining Department that the hammers would arrive from Kobe in one week. I do not know a Japanese called Furota Muraji; I know one called Furota Kunichi. He went to the Mining Department as my agent. I have been to your house four or five times; I saw you every time. Whon the money was paid to you, I did not go myself; my younger brother and my *banto* went and paid the money. I was present when the bargain money was paid to you. The hammers were delivered to the Mining Department, not by myself, but by my *banto*. When I had made a complaint to the Kencho, a letter was received from the British Consul stating that you were willing to return my money and take back your hammers. I have a receipt for the 50 *yen* bargain money. (Produced and admitted by defendant.)

To the Court: The samples were received from Mr Rose by my younger brother and my *banto*. I produce the samples; the difference between them and the other hammers is so manifest that anybody can see it. (A sample-hammer and another hammer produced.)

Norosumi Kunitaro was called as witness for plaintiff, and said: I reside at Ishikawa; I have been employed in defendant's smith-shop to make the hammers in question. I first made two of steel, afterwards I made 65 more. There were made of iron, with a facing of steel. One of the steel hammers I made is now in Court, and likewise one of my 65 iron hammers.

Nemoto Yosuke was the next witness for plaintiff. He said: I live in Ishikawa, and am in the employ of defendant as blacksmith. I undertook the making of the whole gross of hammers for the Mining Department, and I made the last witness help me. First three hammers were made of steel, and afterwards 141 of iron, with steel facings. The steel facing is about half an inch think. Among the hammers produced here in Court one was brought from England, which is all steel; I have made one, also of steel, which bears the mark "cast;" the other two are of iron, steel faced.

This closed plaintiff's case.

Defendant called as witness

Mrs Elizabeth Rose, who was sworn, and said: About this hammer business two young Japanese used to come to our house; plaintiff I have only seen there once, and that was after the hammers had been delievered. He spoke something about getting back $100; it was late in the afternoon when he came, and Mr Rose told him that it was after business hours, and that he must come back at a more convenient time. He did not come again.

Plaintiff, to Court: I remember Mrs Rose very well; she often offered me some refreshment when I came to her house.

Witness: I remember plaintiff coming to our house a long time ago on several occasions, which were not connected with the hammer business.

Plaintiff, to Court: There was no contract made. The only written document is the receipt I got for the $50 paid in advance.

Adjourned until Thursday, the 6th December, at 10 a.m.

IN THE U. S. CONSULAR-GENERAL COURT.

Before H. W. DENISON, Esq., Vice Consul-General.

Messrs. C. H. HASWELL and N. STONE, Assessors.

Monday, November 26, 1877.

The case had been adjourned from the 23rd instant, in order to hear witnesses for the defence.

The prisoner was sworn and said: On the 10th October, 1876, I was in Cardiff, Wales. I went to the American shipping office, and there I met Captian Winsor. I told him I belonged to Massachusetts, and that I had come from London in a packet-ship. After asking me several questions, to try whether I was really from Massachusetts, Captain Winsor told me he was going to Yokohama, and thence to San Francisco or a port in Oregon. I showed him my discharges from the U.S. Navy (produced in Court), and told him I would like to go to Japan. He than procured me a pair of shoes, as I was barefooted, and sent me on board the ship. Some days afterwards the runner from the shipping office came on board and wanted me to sign the articles. I refused to do

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

so unless I got £4 wages, while I was only offered £3. However, I submitted and signed. After arriving at Yokohama, we had liberty to go ashore. The next time we wanted liberty, the captain refused to give it, and we wanted to see our Consul. That was some day in March, and when we were ordered to shovel snow from the deck, we refused to do so until we had seen the Consul. We were then taken ashore by the police and lodged in jail, and the following day we were tried before General Van Bureu, who told us if we would go on board and turn to, nothing more would be said about our refusal of duty, and if we had any complaint to make, we could come to him afterwards. We were all willing to turn to, with the exception of two. The next day I and two more asked to go ashore to see the Consul; captain said we might go, but if we were going to rake that business up again, he would blow our brains out and heave us overboard when we got to sea. We saw General Van Buren, who told us he had spoken with the captain, and we would get liberty. Nothing more was then said about it until one day on our voyage to Hakodate, when the captain told me I was smart in a Court room. When we came back to this port, in the month of May, we had liberty on a Sunday. I was drinking ashore, as sailors generally are when ashore, and I had some difficulty with some of the *Tennessee's* crew; the next morning, before going on board, I had a fight with one of them, and in falling I dislocated my shoulder. I went on board in the afternoon, and the next morning I asked Captain Winsor to send me to the hospital, as my shoulder was out of joint; he gave me no answer, but the next day, Wednesday, he ordered me ashore, and told me that I might go in a *sampan*. I wanted money to pay the *sampan*, but he said he had no money, and he would not trust me with a cent. Neither would he, at my request, give me an order for the hospital, but he wanted me to leave his vessel, as I was unable to work. I went ashore, and the next day I went to the Consulate for an order on the hospital, but I was told that the captain had written a letter that I was indebted to the ship. I then went on board the *Tennessee*, where I was told to write a letter to the Admiral. The next day, which was a Friday, about the middle of May, General Van Buren gave me an order for the hospital to receive me. When I left the hospital, which was the 1st June, I was, by General Van Buren's order, lodged in the Temperance Hall, and he also, at my request, furnished me with clothes. On the 10th July the *Annie W. Weston* returned from Hakodate. I called at the Consulate, where I met Captain Winsor. The Consul said that I was to pay my hospital expenses, $21.50, and Captain Winsor to pay $42, for my board in the Temperance Hall, and that the Captain should bring the balance of my wages, $12.90, to the Consulate, and I was to go on board and turn to work. However, Captain Winsor did not bring the balance of wages, and I remained ashore from that day, which was Friday, until the next Monday, when I was taken up by the police and brought on board. Next day I was sent ashore, put in jail, and tried for refusal of duty. I was sentenced to ten days' imprisonment and to remain in prison until the ship left. I was kept in jail from the middle of July until the 6th October, when I was brought on board in irons. When Captain Winsor brought his irons to put on me, I told him they were too small. When he asked me whether I would turn to, I refused I was then put below under the half-deck, and remained there until next day, when I was sent into the lazarette. On the following Monday we went to sea, and in the course of that week two of the crew died on board. While I was in the lazarette I had nothing but bead and water, with the exception of once or twice, when the cook brought something he called tea.

Adjourned until 1.30 p.m.

The prisoner continued his statement: On the morning of the gale the mate took me out of the lazarette, and told me to get to windward of the booby-hatch and hold on. Captain Winsor then told me that he had been to Tōkiō to see the Minister about me and that I cost him near $120.00. He struck me over my right eye, and I sat down on the booby hatch; the mate come up from below with a loaded revolver and said, that if I did not go to the pumps, he would shoot me; I had, he said, a fair settlement offered me and would not accept of it. I told him that no settlement had been offered me, and that I was sick. At that time one of the crew, Frank Martel, came up and said he would make me turn to. I repeated that I was sick when the second mate told me that I was able to eat my grub, and struck me several blows in my face. Then Captain Winsor came and struck me also several blows in the face, so much so that I was bleeding. When he had finished, the chief officer came up and struck me in the face. He took up a capstan bar and raised it, threatening to kill me with it. Captain Winsor told the boy to get a handswab to wash the blood of my face, and afterwards he patched my face up with sticking plaster and gave me a glass of liquor. By his orders the steward brought me some bread and butter. I remained on the boody hatch until evening, when I was told to go into the mate's room. There I sat during the night. When I came deck next morning, I found the vessel on the starboard tack, with her starboard rail in the water. This was Friday, the day after the storm. Afterwards I was allowed on deck during the day, and irons were not put on me until the evening before we arrived in the port of Yokohama. While we were in the port of Yokohama I was pestered by the stevedore, George Miller, who advised me to go and ask the Captain's pardon. While we were discharging cargo I was kept below, where I suffered much from heat during the day, and from cold during the night; I only had a couple of empty rice-bags for bedding. I afterwards got a bad cold, and the doctor came on board; he called me and advised me to turn to work. The mate also told me to turn to work, and then I would get a chance to clear out. Captain Winsor asked me one day whether I had written a letter to the commander of the *Tennessee*, complaining of my treatment. I denied having done so, and then I was taken ashore and brought before the Consul.

To the Court: The reason why I refused to turn to work, when the vessel had returned from Hakodate, was partly that Captain Winsor had not provided for me in the hospital before he went to Hakodate, and partly that Captain Winsor did not comply with the Consul's decision to pay the remainder of my wages into the Consulate.

To Captain Winsor: Before the typhoon took place you had not struck me, you had only abused me with your tongue. It was snowing and blowing on the day in March when we asked leave to see the Consul; you would not allow us to go ashore, and we refused duty, whereupon you had us taken before the Consul. After that I never refused duty until in July when the vessel had come back from Hakodate.

To the Court: While the ship was in Hakodate, one of the Mitsu Bishi steamers wanted me, but the Consul told me that I could not ship in any other ship.

To Captain Winsor: I did not know that you gave Connor $5 to give to the Consul for me. Connor gave me $1 and told me I must pay it back to him. While you kept me on bread and water, your Chinese steward told me that I had told the Captain that he had sold liquor to the crew, and now he would treat me as he liked.

Adjourned until 10 a.m. to-day.

Tuesday, November 27, 1877.

John Manning, a sailor from the American barque *Annie W. Weston*, was charged with refusal of duty and disobedience to the officers of the ship.

The prisoner pleaded not guilty.

The case had been adjourned from yesterday, and to-day the Court delivered the following Judgment:—

John Manning is found guilty of continued wilful disobedience of lawful commands and continued neglect of duty on board the *Annie W. Weston*, and is sentenced to three months' imprisonment. The charge preferred by Manning against Captain Winsor and his officers is dismissed.

H. W. DENISON,
U. S. Vice Consul-General.

We concur:

C. H. HASWELL, } Assessors.
N. J. STONES, }

Before H. W. DENISON, Esq., Vice Consul-General.

Tuesday, November 27, 1877.

James M'Guire, a seaman from the U. S. ship *Tennessee*, was charged with being drunk and incapable, and destroying property last Saturday afternoon.

Prisoner pleaded guilty of being drunk, but not guilty of destroying property.

Sakitaki was warned to speak the truth, and said: I am the *betto* of the Italian Consul. On Sunday afternoon, whilst at the railway station with my master's carriage, I met the prisoner, who was drunk, and he took the horse by the bit. I told him to be off; but he took hold of the reins and jumped into the carriage. He grasped the dashboard and broke it. Then he ran away, and I followed him, crying out for help. The police came and took him to the station.

The prisoner was ordered to be locked up until sent for from the ship.

IN HIS CATHOLIC MAJESTY'S COURT AT YOKOHAMA.

Before E. DE OJEDA, Secretary of the Spanish Legation, in Charge of the Spanish Consulate at Yokohama.

Friday, November 30, 1877.

REX *vs.* ANGEL RAMON.

Defendant was charged by Okiyo with having assaulted and beaten her on the morning of the 26th instant. Being cautioned, stated: That on that date she went to Ramon's to ask some money to be paid, when Angel Ramon seized her and then threw her downstairs after beating her violently. She showed some contusions on her leg, shoulders, and hands caused by the fall and the blows received, and asked for $5 damages. She produced as witness

Onin, who, being cautioned, stated that she was living with her aunt at No. 133, when on the morning of the 26th instant she heard a great noise in the neighbour's compound, and then saw Angel Ramon strike plaintiff and pitch her down the stairs. Plaintiff was unable to go home unassisted, and witness helped her. She was in a very pitiable condition.

Mr Nakashima, interpreter of the Consulate, stated that he had delivered personally the Consular summons to defendant on the 28th instant.

Defendant did not appear.

Sentenced to pay $5 damages, and a fine of $10, or, in default, to be imprisoned for 20 days.

MANUEL RAMOS *vs.* MARIANO DE LA CRUZ.

This was an action to recover $15, the amount of a promissory note.

Defendant admitted the claim, but pleaded his inability to pay.

Ordered to pay in two monthly instalments.

OKIYO *vs.* ANGEL RAMON.

This was a claim for arrears of wages, amounting is $35, due to plaintiff by defendant. Plaintiff after being cautioned, stated that she had been during five months, through defendant's positive engagement, prevented from getting her subsistence by other means.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Evidence produced. A letter from defendant dated Kobe, 25th April last, acknowledging his indebtedness. She further claims a gold ring, which belonged to plaintiff, and was carried away by defendant. On the 22nd instant she went to his house again to claim her money due since May last, but defendant beat her cruelly, and refused to pay. Further evidence was produced.

The defendant did not appear.

Mr Nakayama, interpreter of the Consulate, declared that he had delivered personally to defendant the Cousular summons on the 28th instant at noon, and having besides informed him of its contents.

Judgment delivered in default for the amount stated and interest, to be paid in four monthly instalments.

IN THE FRENCH CONSULAR COURT.

Before H. PIERRET, Esq., Consul.

Messrs. C. JUBIN and A. HARMAND, Assessors.

FIGUIER *vs.* CARLES.

Tuesday, November 27, 1877.

This was a claim of $50.00, due on two promissory notes, for $25.00 each, dated on the 29th May last, and due on the 31st August and 30th September respectively.

The parties appeared personally.

Defendant admitted the promissory notes, but pretended that plaintiff owed him a still larger amount, as he had stood security for plaintiff with one Casalta, at whose house plaintiff took his meals. He had, however, not yet paid Casalta anything on behalf of plaintiff.

JUDGMENT:

Having heard the parties and their pleadings, and having duly consided, the Court rules as follows:—

Whereas Carles admits to owe Figuier $50, for which debt he has given him two promissory notes, payable, one at the end of the month of August, the other at the end of September;

With regard to the counter claim of Carles, who pretends to have stood security for Figuier to Casalta;

As the two notes, mentioned above, must, from their dates have been a final settlement of accounts between the parties;

The Court orders Carles to pay Figuier the amount of the two promissory notes due, viz $50, of which $25 are to be paid at the end of January, 1878, and the balance at the end of the following February.

IN THE JOTO SAIBANSHO, TOKIO.

Before TOMINAGA FUYOKI, *Hanji.*

Monday, November 19, 1877.

J. DUUS *vs.* RIKUNKIN.

This was an appeal from the Kanagawa Saibansho. The appellant claimed $14,628 50, to wit: Amount due $6,628.00, and interest from the time the claim was brought before the Kanagawa Saibansho in December, 1867, $8,000.00.

Mr G. P. Ness appeared for the appellant; the respondent appeared personally.

Counsel for appellant stated that in the year 1865 the late Ikoho, a Chinaman, residing at Yokohama, opened a firm at Hakodate, and appointed his brother Ishinsai, and another Chinaman named Koso in, as managers. These two persons on the 1st September, 1865, engaged the appellant at a yearly salary of $4,000 for five years. In proof of the late Ikoho being the chief of the said firm, Counsel produced 16 different documents, partly in English, partly in Chinese, which had been issued from the firm. In the course of the year 1865, Ishinsai left Japan for Hongkong on account of his health, and Gen-in-te, another Chinaman, took his place in the management of the Hakodate firm. At the request of Gen-in-te and Koso-in, the appellant borrowed $6,628.50 for the use of the firm from Mr Enslie, an Englishman living at Hakodate. When, afterwards, Mr Enslie wanted his money back, the Chinese firm offered to pay him eight tenths of the debt within 18 months. To this, Mr Enslie would not agree, but sued the appellant in Court for principal and interest, and on the 1st September, 1871, the appellant was, by Judge Hannen, as arbitrator, ordered to pay, which was accordingly done. Counsel for appellant added, that the said award expressly mentioned that the appellant ought to pay the money, although it was not for his own use that he borrowed, but for a Chinamans who was his employer, and that the award plainly proves that it was the Chinese firm that owed the money, and that the appellant, J. Duus, was only the representative of the firm. He demanded, therefore, that the respondent be ordered to pay his client $14,628.50, to wit, $6,628.20 for the original claim and $8,000 for interest to date, from the day when the claim was brought before the Kanagawa Saibansho in December, 1867.

The respondent, on the other hand, said that he, on the 23rd May, 1876, received a power of attorney from the late Oihian-fu to manage his property in the foreign settlement of Yokohama, as proved by the document produced, and that during the year no matter arose concerning the late Oihian-fu, until Mr J. Duus asked him to pay the debts of the deceased with $14,628.50, $6,628.50 principal and $8,000 interest. Respondent doubted the claim, because he found it strange that Mr J. Duus had not demanded such a large amout of money from Oihian-fu, while the latter was still alive, instead of waiting until after his death. For a whole year after Oihian-fu's death nothing had been said about the matter, and now the money was suddenly demanded from one who only held power of attorney with regard to Oihian-fu's house-property. Nothing whatever is mentioned in the papers of the late Oihian-fu about a debt to Mr J. Duus, with the exception of a loan from the Oriental Bank, No 11, Yokohama, of $3,000. The money, claimed by the appellant, if due, is due by the firm and not by the respondent; the suit ought therefore to have been brought against Vishinsha and Wantsu-in, the Chinese managers of the firm. The respondent, for these reasons, pleaded non-liability, as the debt is not mentioned in the books or papers of the late Oihian-fu.

The Court delivered the following

JUDGMENT.

With regard to the 16 documents, that have been produced, partly in foreign, partly in Chinese language, it is rather uncertain whether they are in the late Oihian-fu's own handwriting, because there has been afforded no opportunity of instituting a comparison. The late Oihian-fu may well be looked upon as having been the chief of the firm; but as it is said that Mr Duus borrowed the $6,628.50 from Mr Enslie for the use of the firm, by orders of Vi-in-den and Wantsu-in, the then managers of the firm, evidence of Vi-in-den and Wantsu-in is not a sufficient proof of the doubt. Mr J. Duus was also at that time in the employ of the firm, and his evidence is of course no proof in this case. In a word, there is no proof that the late Oihian-fu, who was the head of the firm and the employer of both Vi-in-den and Wantsu-in and Mr Duus, has ever received the amount of money now claimed, and the appellant is not justified in calling upon the respondent, as representing the late Oihian-fu, to repay the money.

For these reasons the claim of the plaintiff is hereby dismissed.

TŌKIŌ JOTO SAIBANSHO.

IN THE TOKIO SAIBANSHO.

Before YAMAMOTO MASAMI, *hanji.*

J. CLATAUD *vs.* SAKAI JIROKICHI.

Tuesday, November 6, 1877.

This was a claim of $50.00 for alleged breach of contract.

The parties appeared personally.

The plaintiff stated, that he, on the 8th June last, made a contract with defendant, according to which defendant should build the stone steps and do some other building work at plaintiff's house, No. 33, Tsukiji, for the price of 90 *yen*. That he, on the next day, paid defendent 50 *yen* in advance, but that defendant, after having made the balustrade, left the steps unfinished, and, on being asked for the reason, said that he wanted more money, because the number of the steps had been increased. The plaintiff added, that the document produced by him, which is written in French, and signed and sealed by the defendant, is sufficient to prove that this pretension on the part of the defendant is unwarranted, in as much as it stipulates for the steps to be built on American pattern. Plaintiff asked that defendant be ordered to return 25 *yen* of the money, which he was paid in advance, as the work, completed by him, is not worth more, and that defendant besides be ordered to pay 50 *yen* damages for his breach of contract, which has put plaintiff to a great deal of trouble and compelled him to employ a third person to finish the job.

Defendant admitned that he had entered into a contract to build the steps, etc., of the house No. 33, for 90 *yen;* the French document, which plaintiff has produced in Court, has been signed by defendant, although he was unable to read it. When, on the 9th June, 1877, plaintiff paid defendant 50 *yen* for buying materials, he at the same time handed him the French document, saying it was merely a receipt for the 50 *yen*, and told defendant to sign it. Accordingly defendant signed and sealed it. While he was working at the steps, plaintiff told him to make five steps, where only four had been contracted for, and four, where only three had been contracted for. Defendant said that he could not do so for the price agreed upon, and plaintiff then promised an additional payment. But when five steps had been finished (where only four were contracted for), then plaintiff said that he would not pay more then what he had contracted to pay; and as defendant refused to finish them, because it would involve him in loss, plaintiff sent for another man and had the work done unknown to defendant. Defendant had bought materials for the 50 *yen* which he received from plaintiff, because he intended to fulfil his work according to contract; he had carried the materials to plaintiff's place, and his own labour was worth at least 18 *yen*, which plaintiff ought to pay him, instead of his being asked to pay plaintiff any thing.

The Court delivered the following:—

JUDGMENT.

The plaintiff in this case contends that the defendant is bound by the French document, produced by him, and that the other document is merely a memorandum. Defendant, on the other hand, maintains that he is ignorant of French, and looks upon the other document as the binding one.

These two statements are contradictory.

When a person undertakes such a building job, he will draw a plan and fix the number of steps, their breadth, width, etc. Now, the French document merely mentions that the house is to be on the American pattern, while the number of the steps, the breadth, and other measures are clearly set forth in the document written in Japanese characters. There are two documents, one in French, the other in Japanese, and these two documents constitute the contract. But if the statements of both the plaintiff and the defendant were admitted, then plaintiff had never bargained for the breadth and other measure of the steps, and defendant had known nothing of the model by which he was to guide himself in building. If the parties were in such a position to each other, how could the work have been carried on? It is therefore to be supposed both that plaintiff considered the estimate with

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

regard to the steps binding on himself, and that defendant through an interpreter had been made acquainted with the contents of the French document.

According to the estimate, in which the number of steps, etc. were mentioned, the defendant had calculated the cost, and contracted for the price of the job; when, therefore, plaintiff, under pretext of making the steps look like their American model, asked for four steps instead of three, and five steps instead of four, he broke the contract, and, to avoid pecuniary loss, the defendant was obliged to stop work.

For these reasons the plaintiff's claim is hereby dismissed.

TOKIO SAIBANSHO.

REMARKABLE PLANTS.

THE BLUE GUM TREE (*Eucalyptus globulus*, Labil).

(Nature.)

So much attention has been directed during the last few years to the various remarkable virtues attributed to this tree, that an exaggerated idea of its value may exist in many minds. Sufficient has, however, been established on irrefragable authority to justify a brief account, in this series of papers, of the known properties and qualities of the *Eucalyptus*. We rely for a considerable proportion of our facts on a lecture delivered before the Royal Botanic Society of London in 1874, by Prof. Bentley, and on the account of the tree in Bentley and Trimen's "Medicinal Plants" part 15.

The genus *Eucalyptus* is a large one, numbering about 150 species, and belongs to the natural order Myrtaceæ, distinguished by the number of trees and shrubs included in it which yield aromatic properties. The species are all, with a few doubtful exceptions, natives of Australia or Tasmania, and are known in the Colonies as "gum-trees" and "stringy-bark trees" They are all evergreen trees, several of them of enormous height. The one we are describing, a native of Tasmania and temperate Australia, is perhaps the most gigantic of them all, not unfrequently attaining a height of upwards of 300 feet.

The leaves vary remarkably according to the age of the plant; when it is young they are large, sessile, and opposite, of a bluish glaucous-white colour, and placed at right angles to the branches on which they grow, while on older plants they are much narrower, alternate, bluish green, and by a twisting of the petiole, appear as if placed obliquely, or in the same plane as the branches, with their flat surfaces lateral. The flowers are large and not very unlike those of the myrtle, with a very large number of stamens, but differing in the absence of a corolla, the limb of the calyx becoming detached when the flower opens in the form of a lid or "operculum."

The rapidity of the growth of this tree is one of its most remarkable and valuable features. Although not introduced into this country till the year 1856, and not perfectly hardy here, except perhaps in the extreme south-west, trees of a considerable size are not unfrequently seen. A specimen only two years old has flowered this year in the Economic House at the Regents' Park Botanic Gardens. In its native country it is stated that in a grove planted only sixteen years, the average height of the trees is seventy-two feet, and the girth of the stems six feet; while a tree ten years old presents the development of a well-grown oak of a century. In fifty years they are said to attain a height of from 160 to 200 feet, and the trunk a circumference of from 50 to 60 feet at the base. Even where the *Eucalyptus* is not indigenous, well-authenticated instances of a rapidity of growth almost equalling this are on record in favourable climates. Mr Thomas Hanbury states that near Mentone a seedling planted in March, 1869, was then three feet high; in 1874 it had reached forty-eight feet, and the circumference of the trunk was three feet at three feet above the ground. In Algeria the growth is no less astonishingly rapid. The gigantic size of the trunk is combined with a peculiarity of growth which greatly adds to the value of the timber. It rarely sends out a branch till the stem is 100 feet high, and Professor Bentley states that planks have frequently been cut 160 feet long, twenty inches broad, and six inches thick. The timber is stated to be at the same time remarkable for its hardness and durability.

This rapid growth renders the *Eucalyptus* an invaluable tree for planting in countries where deforesting has been carried to so great an extent as to prejudicially diminish the rainfall; and it has now been more or less successfully cultivated for this purpose in France, Spain, Portugal, Greece, Italy, Corsica, Algeria, Egypt, St. Helena, Palestine, the uplands of India, Natal, other parts of South Africa, Cuba, and various parts of North and South America. It has already been stated that it is not hardy in this country, a temperature below the freezing point—or even in some cases a little above it—appearing to kill it. Another useful quality of the tree is that, in consequence of its deciduous bark, it is not attacked by parasites Baron von Mueller, the director of the Botanic Gardens at Melbourne, states that the ashes of the wood of this and of others species of *Eucalyptus* contain a very large proportion of potash, in some cases as much as twenty-one per cent.

The medicinal properties of the *Eucalyptus globulus* are due to the presence, so common in trees and shrubs belonging to the Myrtaceæ, of a volatile oil, in various parts of the plant, but especially in the mature leaves. This oil may readily be obtained by distillation with water, is of a yellow colour when freshly distilled, and resinifies by exposure to the air. Its principal constituent was found by Cloëz to be a colourless liquid boiling at 347° F., which he regarded as analogous to camphor, and to which he gave the name Eucalyptol; more recent investigations have shown this to be a mixture of two substances, a terpene and a cymol, the essential oil containing other substances in addition to these. Older statements that the leaves of *Eucalyptus* contain, besides the essential oil, quinia or some other of the well-known cinchona alkaloids, have been shown, by the researches of Broughton, to be altogether without foundation.

The value of the leaves as a febrifuge, especially in cases of intermittent fever, has been attested by many medical practitioners, English, Italian, and French; and in Australia the leaves have long had a popular reputation in the treatment of fevers. They are best administered in the form of an alcoholic tincture, which is also useful as a stimulant and antispasmodic As an external dressing for wounds it is stated by M. Gimbert that the balsamic nature of the leaves not only has a curative effect, but removes all the unpleasant odour. The oil is also used as a disinfectant and antiseptic.

But the point to which the most interest attaches in connection with the *Eucaliptus* is its alleged anti-malarial properties, in consequence of which it has been called the "fever-destroying tree." On this subject Prof. Bentley says that "the evidence that has been adduced from Australia, the native country of the tree, and from parts of the world where it has been introduced, and which are favourable to its growth, in testimony of its anti-malarial properties, is so strong that, allowing for exaggeration in some cases, it can scarcely be doubted that this tree does produce a most beneficial effect by destroying the fever-producing miasm of marshy districts; and that it should consequently be introduced into all countries and districts where the climatic influences are favourable for its development, and where such miasmatic emanations are to be found." Special interest attaches to the introduction of the blue gum tree into Italy for this purpose, and it is confidently hoped that by its mean the problem may at length be solved of destroying the noxious malaria which has in recent times rendered the level country round Rome so unhealthy in the summer season. The chief difficulty is with the occasional frosts to which Northern Italy is subject. Of a large number of trees planted at one time by the Roman Railway Company along the line from Rome to Naples, only those in the neighbourhood of Naples survived the first winter. It is possible, however, that if they became established through a succession of mild winters, and attained a good size, they might then be able to resist slight frosts.

The mode in which the trees thus act in influencing the climate is open to somewhat more controversy. The popular idea is that the efficient cause is the odorous and antiseptic emanations from the leaves It is quite likly that some influence is exerted in this way, but it seems most probable that the chief effect produced is by the action of the roots on the soil. This function of trees is often greatly overlooked. The effect of the planting of forests in decreasing the rainfall is frequently erroneously stated to be due to the attractive force of the trees on the moisture in the air, similar to that exerted by a range of mountains; but it is difficult to conceive that the small mass of the entire foliage of a forest can exert any appreciable influence in this direction. The mode in which trees mainly act is by their roots arresting the rainfall, which would otherwise escape by the natural drainage of the country; the combined forces of capillarity, osmose, and transpiration then cause the ascent through the tissues of the tree of the water thus arrested, and the larger portion is eventually given off into the air through the stomata of the leaves. In this way a forest tree will in a very short time give off into the air its own weight in water, which must eventually condense, and be again deposited as rain or dew. It is quite possible, however, that the effect of the planting of trees may be apparently the reverse of this in swampy countries where there is no natural drainage. The water then accumulates in the soil; and, if the country is bare of timber-trees and the sun powerful, a rapid decomposition takes place of the herbaceous vegetation with the consequent emanation of malarial vapours. The effect of the planting of trees under such conditions will be to supply artificial drainage; the accumulation of water in the soil and the consequent noxious effluvia will be diminished and finally prevented, and the atmosphere will be rendered, if not drier, at all events more wholesome. This is the mode in which it is hoped that the malarial fevers of the Campagna may ultimately succumb to the influence of the *Eucalyptus*. In no quarter of the world have the beneficial effects of the planting of this tree been more distinctly seen than in Algeria, where it has been carried on to a considerable extent for some years, mainly through the exertion of private individuals, French and English, aided by the Government. All the good things that have been said about it are there found to have been realised. A. W. B.

IMPERIAL GOVERNMENT RAILWAYS.

REUTER'S TELEGRAMS.

LONDON, 29th November, 1877.

SERVIA.

Despatches report that the Servian Militia abroad has been ordered to join the army by the 30th of November, when it is expected that a Proclamation of Servia's Independence will be declared.

THE WAR IN TURKEY IN EUROPE.

The troops of Suleiman Pasha are advancing on Metchka.

LONDON, November 27th, 1877.

Count Andrassy states that he does not consider the proper moment to have arrived for offering mediation between the Russian and Turkish belligerents.

The Russian Press proposes as the conditions of peace to be accepted :—

The cession of the Turkish fleet to Russia.

A joint Russo-Turkish command of the passage of the Dardanelles, to the exclusion of all the other Foreign Powers.

An Imperial Irade has been published in Turkey, calling out a levy of one hundred and fifty thousand civil guards.

INTELLIGENCE FROM THE SEAT OF WAR.

Despatches report that a Roumanian Army Corps is besieging Widdin, that the Russian forces have captured Etropol (?), and that the Turkish troops have abandoned Orchanie.

FRANCE.

A Conservative Ministry having been formed, the Chamber of Deputies has adopted a resolution refusing to enter into relations with the Ministry.

President MacMahon has resolved on a policy of resistance.

ENGLAND.

The *Daily News* states that it considers England bound to ratify the Chefoo Convention without further delay.

LONDON, November 24th, 1877.

FRANCE.

President MacMachon is experiencing great difficulty in forming a New Cabinet.

INTELLIGENCE FROM THE SEAT OF WAR.

A Russian Division having been left in possession of Kars, the remainder of the Russian troops in Turkey in Asia are marching, under command of General Melikoff, on Erzeroum.

LONDON, November 21st, 1877.

The Earl of Shaftesbury has forwarded to the Earl of Derby a Memorial bearing forty-five thousand signatures, the which is in favour of the ratification of the Chefoo Convention and urges moderation to be used with the Chinese on the subject of Tariff, as also the withdrawal of protection from the Opium Trade ; and that China be treated equitably.

INTELLIGENCE FROM THE SEAT OF WAR.

According to an official Turkish despatch the Turkish troops made on the 19th instant a reconnaissance between the Lom and Jantra, encountering and defeating the Russian forces with heavy loss ; they also burnt Pyrgos.

London, Nov. 14th 1877.

Suleiman Pasha has been appointed Commander-in Chief of the Turkish army in Roumelia ; Azli Hasha has been appointed Commander of the Turkish troops at Rasgrad.

A Russian official despatch substantially confirms the news of the Turkish success at Azizie on the 9th instant.

ARIVAL OF THE ENGLISH MAIL.

TELEGRAMS.

London, 7th November.—Quertier's Ministry has collapsed, and the former Ministry will remain in office.

The "Morning Post" states that the Turks have abandoned, and the Russians have occupied Erzeroum. The Turkish troops are said to be making for Erzinghan and Trebizonde.

London, 7th November.—Marshal Macmahon disclaims any intention of resigning the Presidentship of the French Republic.

The French Senate and the Chamber of Deputies reopened quietly and Monsieur Jules Grevy was elected President of the Chamber.

Ghazi Ahmed Mukhtar telegraphs that, on the 5th instant, the Russians having attacked his position at Deveboyun, he deemed it necessary to retire to Erzeroum.

On the 5th, Genoral Scobeleff cannonaded the Turkish southern positions at Plevna.

Kurrachee, 17th October.—The 2nd Belooch Regiment has received orders to proceed at once to the Bolan Rass. They march next Saturday. It is believed this force will cooperate with one from Jacobabad and the Punjab.

London, 29th Oct.—The Hon E. P. Thesiger has been appointed Lord Justice of the Court of Appeal, in place of the Right Hon. Sir R. T. Amphlett, who has resigned.

London, 30th October.—The French Ministry have tendered their resignations, in order to leave Marshal MacMahon free.

ENIGMA.

My second holds my first,
With which I quench my thirst,
And when thou open art,
Thou conquerest my heart,
Because thou teachest art.

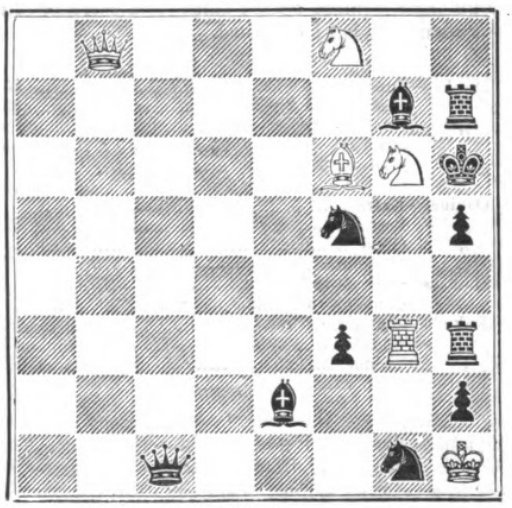
DOUBLE ACROSTIC.

My first with commerce is concerned,
Engrossing thoughts both skilled and learn'd;
My second heeds but certain laws,
For it one can't assign a cause.
Combined, I may incite to sin,
Tho' some my favour strive to win.

1. The news you've heard, Miss A. was seen
2. To kiss a lord behind the screen,
3. Bold jade, it was not even dark,
4. Past the rubicon of a lark,
5. Her parents' wrath was great I ween,
6. She vowed it sweet, fit for a queen,
7. To her all honour we accord / Her elder brother was the lord.

ANSWER TO ENIGMA OF NOVEMBER 24TH.

A Flag.—1, on ships, in armies ; 2, on a church steeple ; 3, carried in processions ; 4, toy flag ; 5, large banner ; 6, flag of victory or rejoicing ; 7, 8, flagstones ; 9, pavements ; 10, 11, the water-flag and the garden-flag ; 12, stones of the street ; 13, hammered and beaten by the paviour ; 14, stones ; 15, plants ; 16, ensign presented to soldiers ; 17, to droop or grow dejected.



Correct answer received from "Fujiyama."

Answers to Chess Problem, Enigma and Double Acrostic are solicited.

PROBLEM,

by H. TURTON.

BLACK.

WHITE.

White to play and mate in 3 moves.

We withold the solution of S. Lloyd's problem of 24th November until next week.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—At the beginning of the week a fair business was done in 16/24 and 28/32 *Yarns*, medium to good spinning; but the demand seems now to be satisfied and the market closes quiet. Of 38/42 some sales are reported. For *Shirtings* a small enquiry continues at low rates. *T. Cloth* and *Velvets* move in small quantities, whereas other articles are neglected.

Grey Shirtings:—					White Shirtings:—		
7 lbs.	38½ yds.	39 in.	per pce.	$1.45 to $1.75	60 to 64 reed 40 yds.	35 in.	per pce. ... ... 2.20 to 2.40
8 lbs.	38½ yds.	44 in.	,,	1.80 to 2.20	Turkey Reds 24 yds.	30 in.	2—3 lb. per lb. ... 0.65 to 0.80
8 lbs. 4 to 8½ lbs.	38½ ,,	39 in.	,,	1.60 to 2.35	Black Velvets		7.25 to 8.25
9 lbs.	38½ ,,	44 in.	,,	2.00 to 2.47½	English Drills 14/15 lbs.	40 yds,	36 in. ... ... 2.40 to 2.65
T. Cloth 7lbs.	24 ,,	32 in.	,,	1.40 to 1.57½	Taffachelass	12 yds,	43 in. ... ... 1.80 to 2.25
,, 6lbs.	24 ,,	32 in.	,,	1.10 to 1.25			

Yarns.—

No. 16 to 24	per picul...	$28 50 to 32.00	No. 38 to 42	per picul...	$36.00 to 40.00
No. 28 to 32	per picul...	$32.75 to 35.00	Reverse Twist 16-24 ... ... ,, ...		—

Woollens.—We have again a very dull week to report. *Blankets* and *Unions* are lower, and *Black Orleans, Italians aad Figured Orleans* are neglected. There has been, however, a little more activity in the demand for *Mousselines de Laine,* but as prices offered are still very unsatisfactory, holders decline to accept them.

Plain Orleans	40—42 yds.	32 in.	... 5.60 to 7.00	Figured Mousselines de Laine	...30 yds.	30 in...	0.25 to 0.28½
Figured Orleans	29—30 yds.	31 in.	... 4.25 to 5.50	Multicolored ,,	...30 yds.	30 in...	0.28 to 0.37½
Shimagoro	30 yds.	30 in.	... 3.75 to 5.25	Cloth, all wool plain or fancy	.. 48 in. to 52 in...		0.80 to 1.20

Plain Mousselines de Laine	—30 yds.	30 in.	... 0.17 to 0.18				

Sugar.—In the absence of business, prices remain nominally as last quoted.

Sugar:—Takao in bag	...(nom.)...	per picul...	$4.45	China No. 4 Kook-fah	per picul...	$6.70 to $7.10
,, in basket ...	,, ...	,, ...	$4 22½	,, No. 5 Kong-fun	,,	...$6.20 to $6.60
Taiwanfoo in bag...	,, ...		$4.35	,, No. 6 E-pak	,,	...$5.20 to $5.80
do. in basket...	,, ...		$4.00	Swatow Brown	,,	... None.
China No. 1 Ping-fah	,, ...		None	Daitong	,,	...$3.70 to $3.90
,, No. 2 Ching-pak ...	,,		...$7.90 to $8.30	Japan Rice	,,	...$2.10 to $2.45
,, No. 3 Ke-pak	,,		...$7.40 to $7.70	Kerosene Oil, nominal	,, ...	$5.00

Kerosene Oil.—Prices have gradually advanced to $5, at which the market closes firm.

EXPORTS.

Silk.—A very fair daily business has been done during the week, but the news from France having lately been somewhat less encouraging, dealers have been induced to submit to a reduction on prices for Hanks, which now brings them down to former quotations. Probably owing to the undesirable quality of most late arrivals, the rejections of *Dyepots* have been very considerable, and as the general demand is for good Silk, the result of the week's transactions is small.

Kakeda, Hamatski, and Filatures have attracted a good deal of attention at former rates, whilst there is not much doing in Harimitchi and Sendai.

Settlements amount to 140 bales of Hanks, 70 bales of Oshius, and 55 bales of Filatures, making a total of 265 bales. Arrivals are about 1,000 bales, and stocks 2,800 bales. The total export since 1st of July is 12,029 bales, against 16,553 bales for a corresponding period last year. The French mail steamer has at present about 600 bales on board.

		In London at 4s. 0d. per lb.	*In Lyons at f. 5.05 per kilo.*
Hanks,—Superior	$580 to 600	20/9 to 21/5	57.00 to 59.00
,, Best No. 1 & 2	$560 to 570	20/1 to 20/5	55.00 to 56.00
,, Good No. 2	$540 to 550	19/5 to 19/9	53.00 to 54.00
,, Good all round No. 2½	$510 to 530	18/5 to 19/1	51.00 to 52.00
,, Medium No. 3	$480 to 500	17/5 to 18/1	48.00 to 50.00
,, Common to inferior No. 4 & 5	$450 to 470	16/5 to 17/1	45.00 to 47.00
Oshius,—Extra	—	—	—
,, Best	$550 to 570	19/9 to 20/1	54.00 to 55.00
,, Good ,, Medium	$550 to 560	18/1 to 19/1	50.00 to 53 00
Hamatski,—Good to Best	$450 to 480	16/5 to 17/5	45.00 to 48.00
,, Common to Medium	$430 to 440	15/9 to 16/1	43.00 to 44.00
Kakeda,—Extra and Best	$600 to 650	21/5 to 23/1	59.00 to 64.00
,, Good	$560 to 580	20/1 to 20/9	55.00 to 57.00
,, Medium	$500 to 550	18/1 to 19/9	50.00 to 54.00
Filatures	$630 to 750	22/5 to 26/5	62.00 to 73.00

Tea.—Since the date of our last issue the Tea market has been quiet, settlements amounting to 2,100 piculs, and arrivals having been on a very limited scale. Stocks in Yokohama probably do not exceed 3,500 piculs. A slight demand for *Finest* to *Choice* parcels has been current, but holders having raised their selling figures to an absurd height, business in these classes has been greatly impeded.

Common	$10.00 to $13.00	Fine	$21 00 to $24.00
Good Common	$12.00 to $14.00	Finest	$27.00 to $32.00
Medium	$14.00 to $16.00	Choice	$34.00 nominal
Good Medium	$17.00 to $19.00	Choicest	—

REPORTS.

The *Maid Marion* reports: Left Nagasaki on the 12th instant. Had moderate easterly winds and fine weather to Oosima; thence fresh gales and rough weather until the 24th instant, when, off Rock Islands, experienced a terrific gale with mountainous sea, lasting 16 hours; the wind, commencing at E.N.E, blew by North to West. During the gale the vessel suffered a loss of some sails and part of the bulwarks.

The H. M.'s S. *Modeste* reports: Left Kobe November 24th. Experienced a moderate N.W. gale followed by fine weather to the 26th instant, when, at 2 p.m. had a severe W.N.W. gale lasting 18 hours, which was succeeded by fine weather and northerly winds to port; arrived at 2 p.m., 28th November.

The American ship *Alice M. Minott* reports:—Left Newcastle, N.S.W., on 1st October; came up to the westward of New Caledonia. Had moderate and light S. E. winds to the Equator, which was crossed on the 26th October, in longitude 164.30 E. Thence had light winds and trades to 30 degrees north latitude, whence experienced severe gales from the north-west, almost reaching hurricane force on the 23rd and 24th instants, in lat. 32.8 N., longitude 134.57. E. During this gale a few sails were blown away. On the 26th instant, while beating up the Gulf, met with a heavy squall and was forced to anchor under shelter of the Eastern shore. Arrived at anchor off Yokoska at 9 p.m. 28th inst., and beat up to harbour during the night of the 29th, arriving at 4 a.m. on the 30th November. The American barkantine *Laura A. Burnham*, Capt, Phillips, left Newcastle on the 29th September for this port.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley, for the abovenamed Pills, for wind in the stomach, from which I suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable Pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

FOR SALE,

At the Office of this Paper,

IN PAMPHLET FORM,

The British Consular Trade Reports

FOR THE OPEN PORTS,

AND

SUMMARY OF THE FOREIGN TRADE OF JAPAN,

FOR THE YEAR 1876.

Price, One Dollar.

Yokohama, September 26, 1877. tf.

GO-GAKU H'TORI ANNAI,

OR

GUIDE TO SELF INSTRUCTION,

In English and Japanese,

In 3 Vols.,

BY

CAPTAIN F. BRINKLEY,

Royal Artillery.

The Japanese Government having GRANTED THE COPYRIGHT of this work, its price IS NOW REDUCED TO

THREE DOLLARS.

May be obtained at Messrs. LANE, CRAWFORD & Co and Messrs. F. WETMORE & Co.

Yokohama, October 27, 1875.

BEST FOOD FOR INFANTS,
supplying the HIGHEST AMOUNT OF

NOURISHMENT in the MOST DIGESTIBLE AND CONVENIENT FORM.

SAVORY & MOORE, 143, New Bond-st., London, and all

Chemists and Storekeepers throughout the World.

July 14, 1877.

W. CRAWFORD & CO.,

75, CARTER LANE, SAINT PAUL'S,

LONDON, E.C.,

Beg to state that they are open for any Commercial Transactions, as to Consignments, for Granting Drafts, and Presenting Commercial Bills for Acceptance and Payment. For Buying English Goods at a very small Commission and Forwarding Goods to any place in England or the Continent.

WE beg to draw your attention to avery important English Invention we have on hand, viz.:

WOOLLEN BLANKETS

OR

COVERINGS,

OF ALL SIZES COMBINED WITH AN

AIR PILLOW.

It will be found most necessary and useful for Military Men, Travellers, Invalids, for use in the Hospitals, &c., &c., possessing amongst others the following advantages:—

It is the finest substitute for a Bed.

The Pillow can be raised or lowered at any time with the greatest ease.

It will pack up in a very small compass, and can be carried about without any inconvenience.

Price from 15s. to 35s. each.

When ordering the above article, please remit the amount of your order to

W. CRAWFORD & CO.

August 22, 1877. 6ms.

W. & C. SCOTT & SON.

FIRST PRIZE MEDAL and DIPLOMA OF HONOUR awarded, CENTENNIAL EXHIBITION, Philadelphia, 1876. For excellence of Materials and Workmanship in their PREMIER QUALITY and medium grades. Their New PATENT TRIPLEX action and COMPENSATING LUMP.

The attention of Sportsmen is requested to the above new system of action. Its superior strength and solidity imparts greatly improved shooting powers. Hard hitting being the desideratum required is obtained by this powerful Gun.

Prices of the TRIPLEX: £22.10.0, £30.0.0, and £37.10.0. This latter is our highest quality and is marked "THE PREMIER QUALITY."

Excellent DOUBLE-GRIP BREECH-LOADERS at £8.10.0, £12.0.0, £16.0.0 and £20.0.0. Shooting guaranteed.

OUR PATENT TOP LEVER with PURDEY solid double bolt. Shooting guaranted. Sound plain finish £15/0/0. Well finished, good materials £21.0.0. Cases and implements £4, £6 and £8 extra.

In the New York International Gun Trial competition, 1873, the Committee awarded our guns the Diploma, being declared first for points of merit of action, materials, proportion and shooting qualities.

Extract from Forest and Stream, New York, December 26th, 1876. Contributed by one of the judges of awards of guns at the Centennial. "The crowning glory of the display was the case of W. & C. Scott & Son. This firm has sent more good guns to this country during the past few years than any other, and they especially commend themselves to American sportsmen from the fact that they furnish good guns, honestly made, and of high shooting powers at very moderate prices. Their TRIPLEX ACTION combines, in the highest degree, strength with simplicity, and it must rapidly secure the favor of all who test its merits."

OUR PATENT COMPENSATING LUMP strongly recommended; should be ordered on every gun (cost, 30 shillings extra). For the Sportsman abroad, this invention is invaluable, being secured against the joint becoming loose after several years wear.

CHOKE BORED GUNS.—Slight, Medium or Full.

BREECH LOADERS in all systems from lowest qualities.

SINGLE and DOUBLE MUZZLE LOADERS.

Makers of the NEW SWINBURN-HENRY Sporting Express and SWINBURN-HENRY RIFLES and Carbines taking Government Ammunition. This Rifle is a great improvement on the Martini.

SNIDERS Military and Sporting. MARTINI RIFLES.

DOUBLE EXPRESS RIFLES .450, .500, .577 Bore.

SUPERIOR REVOLVERS.

Chief Address, Manufactory, Premier Gun Works, **BIRMINGHAM,** ENGLAND.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

There has been no political news of importance to chronicle in the past week. The ball given by the community to Captain Young and the officers of the *Tennessee* previous to her departure from this port was in every respect a complete success, and the Committee deserve the most unbounded praise for the thorough and tasteful manner in which they carried out the arrangements. About two hundred and fifty people were present, the Diplomatic and Consular bodies being largely represented. By the kind permission of the Governor of Kanagawa *Ken*, who was likewise present, the Town Hall was placed at the disposal of the Committee. The good wishes of the community and the regret felt by all at the departure of the *Tennessee* were gracefully expressed in a speech by the Chairman, Mr. Russell Robertson, and replied to in feeling terms by Captain Young. The entertainment was throughout one of the most successful that has ever taken place in Yokohama. The *Tennessee* left on Tuesday, for Kobe, on her homeward voyage, accompanied by the hearty wishes of all for the welfare of those who have so long been resident among us, and whose gracious hospitality will be sadly missed.

The Dramatic Club of Yokohama did well when it selected for presentation on Thursday night, Foote's bright and evergreen comedy *The Liar*. It is not his best piece; as works of theatrical art the *Mayor of Garratt* and *The Recruiting Sergeant* are superior, but these two once famous plays were written to pourtray the ephemeral humours of the day, and are, to modern audiences, obsolete and uninteresting, while *The Liar* still lives and will probably keep possession of the stage.

The comedy of *The Liar* is taken from various sources. Foote laid Plautus, Lope de Vega, Mrs. Centlivre, and Crebillon under contribution, and having a vigorous style of his own, and a rare knowledge of dramatic effect, produced an excellent comedy, full of life and incident, and with an implied, but not obtrusive moral. The book of the play can be read with pleasure, as its well expressed, vivid, and impudent fictions always give amusement, and, as we saw last night, audiences never fail to appreciate the spontaneous wit, clever mystifications, and genial flow of the piece. Unhappily the style of the Georgian dramatists seems to be a lost art. What a difference between Foote's easy and abounding humour and the laboured and tiresome trivialities of Mr. Tom Taylor, under whose editorship *Punch* has become as gruesome as a methodistic warning to sinners!

The chief part in *The Liar*, Young Wilding, is one of Mr. Charles Mathews' most finished personations, and we are fortunate in having in this remote and alien land a player who also, with an admirable art of his own, can represent the ready resources and amusing audacities of the hero. Mr. Bayne played the part with remarkable talent. This gentleman never forgets dramatic propriety, and we commend to fellow amateurs his excellent method. His manner is easy, he has a right conception of the creation, his articulation is distinct and perfect, and he never outrages the intelligence of his audience by unduly emphasizing speeches which would be distorted and vulgarized by over-accentuation. All that Mr. Bayne did was well done, and artistic, and we disagree with his reading in but one slight detail, viz.: we think he should have simulated contrition or distress when breaking the astounding and circumstantial fiction of the marriage at Abingdon in the county of Berkshire, but perhaps the fault or omission lies upon the stage directions. In Crebillon's *Le Menteur* the analogous scene is ushered in by hysterical weeping, and passionate protestations, and the effect of the situation is heightened thereby. We are so confident of Mr. Bayne's dramatic resources and power of characterization that we venture to suggest the revival, in Yokohama, of the English version of Beaumarchais' *Marriage of Figaro*. We are sure Mr. Bayne could play the immortal barber, and rival Coquelin.

The father, Old Wilding, was very well played by Mr. Hay, whose performance, good in the earlier and level scenes, was equal to the occasion in the last act in which "angry passions rise" and bring into strong relief the absurd succession of dilemmas which end in catastrophe. The part of the amusing impostor, the valet Papillon, with choice scraps of bad French, abundant lying and effrontery, and the small remnant of a conscience, was well done by Mr. Pearson, whose speech, gesture, and bye play were excellent. This character is one of conscious exaggeration and imposture, but Mr. Pearson showed his skill and right feeling in not giving a farcical presentment. Mr. Bernard appeared as Sir James Elliot. The part is small but ought to be played with spirit and refinement. Mr. Bernard's performance was correct, agreeable, and meritorious.

We are not ungrateful to the epicene characters. The part of Miss Grantham was played by a young gentleman, Mr. Brown, who performed the rôle with all attainable delicacy, and indeed with grace and feeling. But not the less it was a pity to see an accomplished amateur as Mr. Brown undoubtedly is, in a woman's part. He has a real talent for comedy,

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

and would be at his best if not tramelled by the unaccustomed restraints of woman's dress, and the need for disguising his voice, the natural quality of which is, we think, a baritone-bass of good resonance in the lower notes. Mr. Brown will recognise the truth of this friendly criticism. In male costume he would make an interesting young gallant who would tenderly tell us about his numerous loves, his chequered hopes, his boundless despairs, his occasional raptures. We trust so good an actor will have a more suitable and grateful part given to him when the next drama is presented. Mr. Henley took the part of Miss Godfrey, and acted well. We also would like to see this amateur employ his evident talent in a more congenial representation, as he will do all that may be required of him with good taste, and sound dramatic instinct.

The comedy was well mounted, the dresses were good, and the acting throughout was of uncommon merit. All the performers were well trained, and possessed artistic reserve, so that the ordinary vices of amateur theatricals, obtrusiveness and neglect of dramatic propriety, were avoided.

We are not ungrateful, but as we looked round the theatre it seemed to us that in this little outlandish place which has the enviable privilege of the presence of so much beauty, taste, refinement, and we are sure, innate dramatic talent, some ladies might be found to tread the boards. We respectfully appeal to the ladies of Yokohama to come to the assistance of the Dramatic Club, as with their help we could have one of the best amateur corps in the East. For instance, how can a man do full justice to the part of the skittish Miss Grantham with her pretty coquetries, feminine distresses, tricks, stratagems, and reasonable maliciousness? And in this place there are a score or more of ladies with fair presence, self possession, and mimetic talent, who with but little training would become delightful *comédiennes!* In Shanghai several plays have been performed in which ladies of the community have filled the women's characters, and in the little society of Peking where ladies take part in the winter theatricals, the acting would do honour to any theatre in Europe. In this settlement there is abundant dramatic talent among the fair residents, but it is now dormant, and we earnestly desire to wake it into life and action. We can promise appreciative and grateful audiences.

The farce of the *The Lion Slayer* followed. As a piece of literary work it is contemptible, but yet is an uproarious, outrageous absurdity, which caused frequent laughter. The incidents occur in the regions of broad farce, and Messrs. Eyton, Brewer and the other gentlemen played the little extravagance in the robustest Adelphi style of low comedy, and according to the Wrightian and Toolean traditions. The farce was, in parts, certainly droll, and the actors for once renounced their accustomed ways of gentility and assumed the exquisite vulgarity which tickled the audience. Mr. Vivanti was a pretty soubrette, and Mr. Brower made a successful first appearance.

Captain von Wickede, of the Imperial German frigate *Elisabeth*, did the Dramatic Club the favour of sending the excellent amateur ship's band, which is composed of good musicians. Some selected melodies were played during the evening.

The little theatre was well filled.

A letter has been addressed by Mr. Gordon, the Secretary of the Bombay Chamber of Commerce, to the Secretary of the Trinity House, London, calling attention to the great necessity which exists for a light being placed on, or in the neighbourhood of Cape Gardafui, on which coast so many vessels have been wrecked, the latest catastrophes being those of the M.M. steamer *Meikong* and the B. I. S. N. Co.'s steamer *Cashmere*, which were lost within a few days of each other. Mr. Gordon states that in 1873 Sir Bartle Frere, Her Majesty's Envoy to the Sultan of Zanzibar, in a despatch to the Foreign Office, represented the pressing need of such a light, and recommended that the work should be undertaken by Her Majesty's Government. No attention has, however, up to the present time apparently, been taken of these representations, and thus shipping disasters attended with great loss of life and property have been of almost yearly occurrence on this inhospitable coast. Mr. Gordon goes on to say:—"From the inquries which have been instituted into the causes of these disasters, it has we believe been invariably proved that they were due to hazy weather and strong currents and to the impossibility of discerning the land until a vessel is dangerously close to it. Captain Fairfax describes the land extending for some miles to the southward of Cape Guardafui as "covered with a light-coloured sand, and terminating in a high bluff point." And he adds:—"As a current is always running along the East coast of Africa with varied velocity, the weather being generally hazy, ships coming from the southward at night are seldom certain of their position, and, after passing the bluff point before mentioned, are liable to take it for Cape Guardafui and bear up, in which case the vessel would most likely go on shore under the sand hills" The accuracy of this description, and the dangers undergone by vessels passing within a short distance of the Cape,—and this is the course usually taken by all vessels going from China, the Bay of Bengal, and the East coast of Africa to Aden—derive a melancholy confirmation from the recent official accounts of the loss of the s.s. *Meikong*, belonging to the Messageries Maritimes Company, on the 17th of June, and of the s.s. *Cashmere*, belonging to the British India Steam Navigation Company, on the 5th of July last. Captain Foache, in his official report of the loss of the *Meikong* states that, after the vessel was aground, he "tried to find out the position he was in, and saw then that the shore was covered with a thick white fog, and that he was scarcely half a mile inside Guardafui, and that what he took for Guardfui were the inland mountains." Again, in the report of the Court of Enquiry regarding the loss of the s. s. *Cashmere* by the Brigadier General, Political Resident, and Sessions Judge, at Aden, dated 19th July, it is stated that the haze continued throughout the day to such an extent that the low land could not be distinctly seen, although the high land could on some occasions be easily discerned. This state of things continued until the steamer took ground, about 8 o'clock p.m. on that day."

A list is appended to the letter of the principal wrecks that have taken place in the neighbourhood of this dangerous spot, though it does not include all the accidents that have occurred, and which might have been avoided had a proper light been placed on or near the Cape

Name of Vessel.	*Date of Wreck.*	*Position of Wreck.*
S. S. Parnassus.....	4th July 1872 ..	5 miles South of Cape Guardafui.
S. S. Singapore	July or Aug 1873 ...	In just about the same place.
S. S. Azalia.....	— 1873.	
S. S. Quangchow.....	July or Aug 1873 ...	63 miles West of Cape Guardafui.
S. S. Tenasserim	— 1874.	
S. S. Thomas Bayne....	— 1875.	
Ship Tribune	June or July 1877....	At Ras Hafoon to the S. of Cape Guardafui.
S. S. Meikong.....	Do. 1877....	A few miles to the S. of Cape Guardafui.
S. S. Cashmere.....	Do. 1877....	Do. do.

The letter concludes with an earnest hope that the Trinity House Corporation will urge that immediate steps be taken for the erection of a light on or near this headland, as the number of vessels passing the Cape is annually increasing, and the probabilities of accident therefore augmented. It is to be hoped that the representations of the Bombay Chamber, as embodied in Mr. Gordon's letter, will cause prompt and proper measures to be taken to remedy the want.

While the terrible nature of the famine in Southern India has of late engaged the attention of all minds, but comparatively few people outside the foreign communities in China and Japan are aware, even to a slight extent, of the frightful condition of affairs that have for a long time past prevailed in certain provinces of China, and which is daily growing worse. In our columns of to-day will be found an article, communicated to us by one of the Famine Committee, upon the question of sending relief to the sufferers, but we have been favoured with further particulars by a gentleman long resident in China, which reveal a state of things absolutely

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

appalling. Out of the 350,000,000 inhabitants of China, 180,000,000 are suffering in great or less degree from actual famine. The calamity is most severe in Shênsi, and the adjoining three provinces, embracing a population of some 75,000,000 souls, (Shênsi alone contains 37,000,000). In Shensi the price of rice is twenty-seven and a half dollars per picul, and there is but a few weeks' stock. In spite of the efforts of the Chinese Government, at last aroused into something like action, no commensurate help can reach the starving people for two reasons. In the first place, there are no adequate means of transport, and in the second, whatever attempts are made in any degree to relieve the pressing necessities, are frustrated by the boats and drays being siezed and plundered by starving wretches. The miserable creatures are endeavouring to support existence on roots, tree bark, even thatch, and are dying in myriads, while even if help could reach them, the survivors, or at least the children, will never recover entirely from the terrible privations to which they have been subjected. In no part of China are the crops good. In some provinces they yield only forty per cent. of an average crop, while in others nothing whatever has been grown. There is but too good reason to fear that what has been predicted by the Jesuit Fathers for many years is in process of fulfilment, namely, that absence of rainfall and drying up to the land which follows the complete denudation of trees. It is well known that the Chinese have utterly deforested great portions of their country, and thus, unless some artificial means can be resorted to on an enormous scale to prevent such a calamity, it is only a question of time for the North and North-west provinces of the Empire to become as dry as the Isthmus of Suez, which was once a fertile district. Wells are failing even in the limestone district, and the ground is gradually losing its fertility. The desiccation which has overwhelmed Central Asia is now extending over North China, and as the change is physical the evil seems unavoidable. This is doubtless the most awful famine that the world has ever seen, and one with which it would be impossible to cope under the most favourable conditions. An effete Government like China can do next to nothing in affording relief, and although we read that Imperial grants have been made to the extent of a quarter of a million sterling and 12,000 tons of grain, what is that among so many? Unless some great change takes place in the present outlook, the partial depopulation of China by the worst of deaths, starvation, seems unavoidable.

While on this subject, we are permitted to state that in the absence of any one appointed for that purpose by the Famine Relief Committee in China, the Manager of the Hongkong and Shanghai Bank in Yokohama, Mr. Turner, has kindly consented to receive any subscriptions that may be sent to him to be applied to the relief of the distressed provinces, the acknowledgement of which will be made through the Press. The calamity is too vast to be met by any individual efforts, but private charity may do a little toward alleviating the sufferings of some few of the starving multitude.

Out of evil oftimes comes good, and lessons taught by the Indian famine will do much to enlighten the Indian Government as to the condition and disposition of the people they have taken in charge, of which it seems to have been hitherto somewhat culpably ignorant. It is well known how hard it is to overcome native prejudice in sanitary matters, and it is within the experience of all of us that Japanese or Chinese prefer to have recourse to the so-called remedies and charms of their native doctors, than to follow the advice of the most skilled European practitioner. According to the *Bombay Gazette*, the pestilence which preceded the famine gained such terrible headway by either ignorance or neglect of these national characteristics. A correspondent states that it was quite easy to travel for two hundred miles or more without "being able to find a piece of sticking plaster or a dose of castor oil." The people prefer their own medical advisers, and it was held that it "was better not to interfere with their prejudices, and this when small-pox is raging and the sole dependence of the village is being placed on some Hindoo goddess who was at one time specially 'told off' to attend on small-pox patients, but who has obviously long ago resigned the appointment." It is therefore probable that the terrible results of the late famine will lead to some better system of organization being established throughout the country.

The *Nichi Nichi Shimbun* devotes a long article, of which we give a precis elsewhere, to an exposition of the causes which induced the Japanese Government to give its consent to certain clauses in the existing commercial treaties with foreign powers. Altogether the article is written, from a Japanese point of view, in a fair and moderate spirit, and though we are inclined to doubt the statement that Lord Elgin and Baron Grau followed the leading of Mr. Townsend Harris, it cannot but be admitted that the latter was the most able of the American Representatives who have been sent to Japan, and that he conducted an extremely difficult and delicate mission in a very able manner. Both the American treaty and that drawn up by Lord Elgin were, however, founded upon, or were simple modifications of the China treaty. Doubtless, as we have before taken occasion to remark, the Japanese can justly complain of certain clauses in the old treaties, which were drawn up at a time when the condition of the country was entirely different from what it is at present, and on the literal fulfilment of which it would be unjust to insist, since such terms would never be proposed to the Japanese Government at the present day. Foreign Powers ought not, however, to be blamed for any delay that may have occurred in bringing forward the question of revision. Want of space forbids us to review the article at any length in our present number, but we call the attention of our readers to it, as it will well repay perusal.

But the *Nichi Nichi Shimbun*, although much given, as becomes it, to the discussion of these weighty matters, does not disdain to relieve its columns by lighter matter. Among other stories, it gravely relates how a *soba* (buck-wheat macaroni) seller in Osaka, who for a long time past had been doing a snug and profitable business, met with the common fate of man, and fell into misfortune. As we all are apt to do when hard up, he took to thinking how he could make up his losses, seeking earnestly for some short cut to wealth. In discussing his affairs with a friend, he was told by the latter that the Inari Sama (Fox God) on the Hiyotan-yama, had the repulation of behaving in an extremely generous manner to his worshippers, and that if he would pay earnest vows at the shrine, he would probably reap the reward of abundant riches. The ex-macaroni seller, delighted at the news, set out at once, and day after day might he be seen prostrate before the Fox God's Shrine. At midnight on the 19th of last month—you see how particular we are as to the exact date and hour—the prayerful man had a dream, in which appeared to him a saintly and venerable looking being who thus addressed him:—"I am a messenger to thee from the Fox God whose shrine is on the hill of Hiyotan. Thy prayers and thy vows have been heard and thou hast found favour in his sight. He hath bidden me tell thee therefore, that if thou come to his temple again at midnight on the morrow, there shall be shown to thee how thou mayest make even one thousand *yen*." And saying this the heavenly messenger disappeared, as the narrator has it, like smoke. Now, when the poor man woke up, remembering his dream, he was so overcome with gladness that he could sleep no more. The whole of the next day, hardly able to wait for the arrival of the time appointed for him to present himself at the Fox God's shrine, he spent in mirth and feasting, and when midnight came he took his joyous way to Hiyotan. Arrived there, he was busily engaged knocking his empty head before the shrine, with his hands tightly clasped in prayer, when he was rudely siezed by two robbers, who lay in wait in the temple for chance wayfarers, and who demanded his money or his life. There was no alternative but to comply, and in a twinkling the highwaymen had eased him of money and clothes and left him penniless and shivering in the cold night air. Enraged beyond endurance at the shameful trick the deceiving God had played upon him,

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

the devotee broke open the doors of the shrine, and seizing the image of Inari Sama, flung it with a curse into a neighbouring cesspool. After which, in the words of him who tells the tale, the poor macaroni merchant wended his way home a colder and poorer, but a wiser man.

A few days ago, a complaint appeared in the native papers of the discontinuance of the use of lanterns, and the consequent falling off in the trade of lantern-making. The complaint is not ill-founded, and the authorities would be conferring a boon on natives and foreigners alike, if they would insist that the regulations concerning the carrying of lights at night should be respected, at least by drivers of carriages and *jinrikisha* men. These latter—we are speaking of those in Yokohama and the neighbourhood—seem to think that the rates of fare they are allowed to charge do not warrant them in going to the expense of a candle, and thus they constantly evade, when they think they can do so with safety, the law which should oblige them to carry a lantern. The police, it is true, sometimes come down on the offenders, but still the practice is gradually increasing, and is fraught with dangerous consequences both to pedestrians and occupants of the vehicles. On three occasions lately the writer of this paragraph has had a narrow escape from serious injury, owing to this culpable neglect of a most necessary precaution, and we feel sure that it is only necessary to call the attention of the local authorities to the matter, to cause them to take steps to ensure obedience to their regulations.

From the Manila papers we glean some particulars of the policy recently initiated by the Governor General for the purpose, not only of securing an increased production of Tobacco, but of improving the quality of the leaf. The first and almost essential step towards the accomplishment of progress in either direction will be that of prompt payment to the natives for their crops; and recognizing this indispensable condition, the Government is now paying in full for the current crops, and making strenuous exertions, as well, to extinguish the large arrears due to the farmers, who have through the reprehensible and short-sighted expedients resorted to by the Government of late years, been kept impoverished and discontented. New lands are being surveyed, and several new townships will be established in suitable localities.

A regulation has just been put in force whereby Cigars may now be purchased for export at any time between the periodical public sales, upon payment to the Government of a premium of ten per cent., in addition to the regular prices established for the different sizes and descriptions. Considering that the average premium received by the *Hacienda* during the last eight years does not exceed four per cent., the new decree does not appear particularly liberal, although merchants will doubtless be glad to occasionally avail themselves of the increased facilities to obtain cigars for export. Some shrewd persons are of the opinion that the regulation is but the precursor of a permanent advance in Government prices.

Mr. F. Griswold Heron, having received his exequatur, assumed change of the United States Consulate on the 8th ultimo.

We call attention to two telegrams, received just as we go to press.

From the "Japan Mail Daily Advertiser."

Monday, 3rd.

The American barkantine *Laura A. Burnham* arrived from Newcastle N.S.W. yesterday afternoon, with loss of fore mast and main top-mast. This accident occurred during a squall in lat. 41 N., near the Ladrone Islands, and detained the vessel about a week in her passage. By setting up the head stays from the main mast head the vessel was worked well, and under this rig made good headway to port.

The *Chôya Shimbun* contains a few remarks anent lanterns. It complains that since the use of foreign made lamps became general throughout the country, and the introduction of gas, the use of lanterns has to a great extent been diminished. The Government having also repealed the law which compelled people to carry lanterns at night, they are now used only by *jinrikisha* men, and thus in common with old armour, swords, and Chinese classics, lanterns have been stored away with rubbish in the corners of outhouses, never to be used again. This year, however, there has been a wonderful revival of their use, and at the National Exhibition and at the Emperor's fête at Hamagoten, they have been permitted to illuminate the faces of the *heimin*, with whom the editor is pleased to class himself. Again, at the festival of the *Shokonsha*, lanterns achieved a great triumph and shone out with intense glory. Whenever the *kuazoku* or *shizoku* give an entertainment lanterns are considered indispensable, while it is even related that one of the newspapers hung some thousands in front of its office on the occasion of some illumination. Then in conclusion, says the editor, "I like plenty of light and hate darkness, but as I am poor I cannot always get what I want. How fortunate then that there should be this year so free a use of lanterns. I hope every body will fall into the custom. It has been said by an ancient sage, 'One should turn oneself into light in order to give light to the poor.' If our virtuous Emperor and his intelligent Ministers would thus turn themselves into lights and enlighten the poor, we would for ever worship them."

The same paper states that at 8 o'clock of Friday morning snow fell in Tôkiô. The weather lately has not been what is usual at this time of year, there having been an absence of those warm summer days which makes the early winter months so enjoyable in Japan.

The same paper states that on the 1st anniversary of the establishment the *Inaka Shimbun*, published at Owake in Bungo, the editor and staff of that paper held a festival at a temple called Miorenji. Here prayers were offered in memory of the late editor of the journal, Masuda Sôtarô, who was one of the bravest of the leaders on the Satsuma side in the late rebellion, and was killed by the Imperialists. The fête was attended by great crowds who flocked from far and near.

Tuesday, 4th.

The M. M. Co.'s steamer *Tanais*, with French Mails on board to the 21st October, left Hongkong on Sunday morning, the 2nd instant, at 8 o'clock.

From the *Akébono Shimbun.*

The War Department has issued instructions, that at all the various garrison towns sentries are to be posted at the residence of the commanding officer.

From the *Hôchi Shimbun.*

Cholera having been eradicated in Yokohama, the examination of passengers at the hatoba has been discontinued since the 1st instant.

From the *Nichi Nichi Shimbun.*

The principal examinations in the primary schools in Tôkiô have commenced. The Government has decided to give silver and copper medals as a reward for ability, to those who successfully pass through their examinations.

From the *Osaka Nippô.*

Among the present population of Osaka are 55,008 persons who are natives of other parts of the country.

From the *Chôya Shimbun.*

Eleven men and fifteen women, who were arrested either by the police or troops at Kagoshima, are to be brought to Tôkiô for trial.

From the *Yomiuri Shimbun.*

The Siamese Government has prohibited the export of rice until September next year.

Wednesday, 5th.

By the latest advices from Hongkong, we learn that up to the evening of the 23rd ultimo the number of deaths from the explosion of the *Yesso* had reached sixty-eight, including Mr. Haggat, the 2nd engineer, who was the only European on board injured. At the time of the *China* leaving an inquest was

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

being held on those who had died through this lamentable accident, but nothing had been elicited to account for the explosion.

The *Wakanoura Maru* arriving from Kobe yesterday afternoon with 300 native passengers and a general cargo, among which was a deck load of 350 cases kerosene oil.

The *Chôya Shimbun* says that the Prime Minister has notified that one *yen* per diem will be allowed for the medical expenses of those officials who were appointed to prevent the spread of cholera, and who were attacked by the disease while discharging their official duties. The families of such officials who died from the disease will receive compensation based on the amount of salary the deceased was in receipt of at the time of his death, ranging from 40 to 250 *yen*, while an additional sum, ranging from 10 to 50 *yen*, will be allowed for funeral expenses.

From the *Akébono Shimbun.*

A special court for the trial of the Kiushiu rebels is now being established within the *Genrô-In*, which will be completed in a few days.

From the *Chôya Shimbun.*

The godowns of the Financial Department have hitherto been under the protection of the police, but hereafter they will the guarded by the troops of the Tôkiô garrison.

On the afternoon of 3rd instant at 4 p.m., H. I. H. Arisugawa-no-Miya entertained the *Daijin*, *Sangi*, and other prominent officials at dinner at his residence.

Thursday, 6th.

The Chinese man-of-war *Hoi-hon* arrived at Nagasaki on the 30th ultimo, having on board the Ambassador to Japan and his suite.

From the *Nichi Nichi Shimbun.*

The Bureau of Decorations is now taking into consideration the question of the services rendered by certain Government officials during the Kiushiu rebellion, with a view to bestowing rewards upon them.

Many of the students of the Private School at Kagoshima were, before the rebellion broke out, sent to France for instruction, and the Minister of Foreign Affairs has lately made enquiries of the *Kencho* as to their condition at present, fearing that they way be in a state of destitution.

The Chinese man-of-war *Kai-an*, conveying the Chinese Ambassador and suite, left Nagasaki on the 3rd instant for Kobe.

From the *Chôya Shimbun.*

The condition of the town of Kagoshima is not so bad as might have been expected after the late war. Of the *samurai* quarter one third has been rebuilt, and of the merchants quarter one half has now been restored, in some cases the houses being better constructed than they were before the rebellion.

The body of Oyama Tsunayoshi, having been handed over by the authorities to the late Governor's relatives, has been buried at Kagoshima.

The relatives of Saigo, Kirino, and others will, it is expected, shortly institute special furneral ceremonies in honour of the fallen.

The Government powder mills at Kagoshima and the neighbouring *Ken* will for the present be closed. All ammunition will henceforward be supplied to the various garrisons from the arsenal at Kamono in Osaka *Fu*. Five millions of snider cartridges have just now been ordered, but as the establishment at Kamono is not capable of doing the work in the requisite time, part of the order will be carried out at Tamaki.

From the *Hôchi Shimbun.*

As a rumour prevails to the effect that Machida Keijirô, son of the ex-*Daimio* of Sadowara and one of the rebel commanders, whom the police have been so long unsuccessfully trying to find, shot himself at Yamagawa in Kagoshima *Ken* on the 21st of September last, the police have gone down to make investigation as to the truth of the report.

The local authorities of Wakayama and Sakai *Ken*, the principal district for oranges in Japan, have reported to the Central Government a failure in the crop of that fruit this year, owing to a severe hail storm which occurred in August last.

Friday, 7th.

The *Hochi Shimbun* tells an extraordinary snake story, as follows:—About ten *ri* in the interior from Obi, in the province of Hiuga (Kiushiu), is a place where snakes abound, which do not retreat to holes in the ground during the winter months as do such reptiles in other parts of the country. A person stopped in the neighbourhood for a night at a farmer's house, and was surprised to hear the host bid some one unseen to appear and pay his respects to the guest. After a bit a snake, about six feet in length, crawled out from under the house, and after bowing politely to the stranger, returned to its retreat. The *Hochi* concludes by the statement that in the part of the country referred to, snakes are domesticated with the people like dogs and cats.

From the *Chôya Shimbun.*

A letter from Kumamoto says that the houses in the principal streets have been rebuilt. The *yashikis* of the *samurai* have been converted into shops. The *samurai* are still as conservative as ever, and love the old style of things.

From the *Nichi Nichi Shimbun.*

A man named Inouye was sometime ago arrested for armed burglary and imprisoned in the jail of the Bureau of Police. At 10 a.m. on the 5th instant, having apparently somehow obtained possession of a dagger, he attempted to make his escape by climbing the outer wall, and some of the keepers saw him, but as he was armed they feared to approach him. However, the alarm being given, some policemen appeared on the scene, and struck the dagger from the hands of the convict and secured him. It then appeared that the weapon he had been armed with was only made of wood and silver paper, but seems to have been sufficient to deceive and frighten the keepers.

The Army Department sent a large number of swords to the Osaka garrison on the 5th instant.

Nakahara Hisao, who was accused of having tried to assassinate Saigo and other Satsuma leaders, together with twenty-four others so accused, had hitherto been confined in charge of their relatives, but now that they are to be examined they have been handed over to the Kiushiu Special *Saibansho.*

From the *Mainichi Shimbun.*

Some 12,000 *koku* of rice have been brought to this port from Akita *Ken*, which will be exported to China.

Saturday, 8th.

From the *Nichi Nichi Shimbun.*

The *Tsukuba Kan*, under the command of Captain Matsumura, will proceed to Australia on about the 15th of this month.

From the *Hôchi Shimbun.*

H. I. H. Higashi Fushimi-no-Miya entertained H. I. H. Arisugawa-no-Miya, their Excellencies Sanjô, Iwakura, the *Sangi*, and generals and principal officers of the navy who took part in the war, at dinner at Hamagoten on the 5th instant.

From the *Nichi Nichi Shimbun.*

From Kiôto we hear that the projected railroad line between Kiôto and Osaka has been staked out, which shows that work in that direction has at last been commenced. Improvements on an extensive scale are to be made in embanking the Yodo river.

From the *Chôya Shimbun.*

Small-pox is prevalent in Yamaguchi *ken* (Chôshiu). Four persons have already died of the disease and twenty-four are now under treatment. The authorities have requested that some vaccine matter should be furnished them.

A. GOERTZ, M.D.
Surgeon-in-charge.

By the M. B. M. S. S. *Kwajiun Maru*, which arrived here on Wednesday evening, a number of shipwrecked Corean sailors were brought up to this port from Kagoshima. It seems that the junk in which these men were engaged was recently cast away on Tanega-sima, a large island south of Van Diemen's Straits. It was the intention of the authorities at Kagoshima to send them here in the steamer, but when they got alongside and saw there were Europeans on board, they not only refused to travel in the ship, but became almost frantic in their endeavours to explain their dislike to be brought into contact with foreigners, and expressed by their gestures their willingness to die rather than go in the steamer. As it was found impossible to induce them to leave the junks, a compromise was effected by which it was settled that the *Kwaijiun Maru* should take them in tow, which was accordingly done. These men are described as tall, powerful fellows, exceeding in size an ordinary Japanese, and looked as sturdy as they were burly.—*Nagasaki Rising Sun.*

The British gun vessel *Frolic* left for Nagasaki yesterday morning; the gun vessel *Shelduke* arrived yesterday afternoon from Hankow, and the U. S. corvette *Ashuelot* came up to-day from Tientsin.—*Shanghai Courier.*

Capt. Jackson of the steamer *Diomed* has obligingly furnished us with the following information from his private log. "On the 13th October, at 9 a.m. sighted the hull of a ship right ahead. Stopped; lowered a boat; went and had a look at her. Found her to be the hull of an iron ship, apparently about 900 to 1000 tons, completely burnt out, nothing but about thirty tons of smouldering ashes in her bottom; plates still hot, not a vestige of woodwork left. Iron bowsprit only spar standing. Topside strong plates. Beams all warped by the heat. Steering-gear gone; but making little or no water. Thought of towing her, but on second thought gave up the idea; as, having little or nothing in, and drawing only a few feet of water, with a speed of six knots and anything like a sea on she would most likely have capsized. The only things legible were the letters G.O.W. on the starboard quarter; but from that, the style of the ship, and what little paint was left on her, I took her to be one of the "City" line of sailing ships, probably bound for Bombay. Not being able to sink her, left her at 11 a.m., and proceeded on the voyage. Position at noon of our steamer *Diomed*, by observation 8° N. 70° E.—*Shanghai Courier.*

PROSPECTS OF TRADE IN JAPAN.

A PERUSAL of the interesting article in the last *Fortnightly* intituled "The Liquidations of 1873-1876" ought to give some comfort to those who, wearied with the continued depression of business in Japan, have come to regard any notable improvement of trade as little likely to be realized. But it is well to recollect that the depression we labour under is not merely local in its nature, but is a part of the general depression from which trade has suffered throughout the world, since the close of the extraordinarily prosperous period that saw the beginning of its end in the great Vienna panic of May 1873. MR. GIFFEN, the author of the article we have referred to, tells us—and he is no mean authority on such a subject—that depressions of this kind are periodical, that they recur at tolerably regular intervals, following in the wake of equally regular periods of great prosperity, and that the alternation has its roots in human nature, which lends itself to an ebb and flow, to an action and reaction in affairs. The fact is, the periods of prosperity are not so entirely prosperous nor the periods of depression so entirely the reverse, as at first sight might be imagined. Human nature sways now in this direction now in that, but the capacity for production remains unaltered, and the consumption of the mass of products can, of course, suffer but little change. The desire to buy and the desire to sell in their whole expression are pretty much the same at all periods, and commercial adversity is not due to any failure of the physical world or diminution of the energy and intelligence of mankind, but simply to mistakes committed on a large scale, repented of to an equal extent, and resulting in a prudence lasting just long enough to produce a confidence which sooner or later induces forgetfulness of the hard-learned lesson, and brings about the disasters which complete the ever recurring cycle. The conditions of modern commerce, and especially the facilities that since the institution of joint-stock banks have been at the disposal of speculators, tend to make these cycles of alternate prosperity and adversity of shorter and shorter duration. The very cause, indeed, of the enormous extension of commerce that the last twenty years have witnessed, the increased efficiency and cheapness of the means of telegraphic and steam communication between the different parts of the world, has been a principal agent in the production of commercial panics, for by widening the area it has multiplied the dangers and added to the attractions of speculation. So true it is, that hardly any progress seems possible in human affairs without the accompaniment of a new risk, and the increased ease of commercial operations on a large scale that latter years have brought about, is attended with the perils incident to over-speculation against which no sufficient safeguard has yet been discovered. No doubt, too, the rage for novelty characteristic of the present day has much to do with the apparent fickleness of the fortune of commerce. The expensive and elaborate organisation necessary to bring a particular branch of trade to the requisite capacity for cheap production, is often rendered useless, almost at a moment's notice, by a change in the public taste, and the capital sunk to gratify it is almost entirely destroyed.

In this country the ebb and flow of commerce has been markedly observable during the past six or seven years,

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

The final accomplishment of the revolution was succeeded by a period of enthusiastic belief in a rapid and unlimited development of the trade of Japan. Foreigners trusted to an immediate conversion of the Japanese into eager consumers of the products of western industry, and the Japanese themselves seemed bitten with a mad desire to abandon their own for foreign habits of life.

The fetters that had shackled the intercourse between Japan and the outer world were thrown off, and to Japanese as well as to foreigners it seemed that a new era was being opened, promising the most splendid results. An essential factor in the success of the new commerce was lost sight of on either side. Commerce, after all, is a mere matter of buying and selling, and its development is limited in the long run, not simply by the desire of buyers to buy but of their ability to pay. After a year or two's prosperity it began to be perceived that Japan was a willing but a bad customer. The native merchants could not continue the disposal of their foreign wares to their customers, for the purchasing power of the latter was soon exhausted. Immense stocks could not be sold except at a sacrifice that forbade their renewal, and the foreign trader, who basing operations upon a continuance of the demand had provided enormous reserves of goods to meet it, saw himself left with godowns filled to bursting with imports, for which no purchaser at even cost prices could be found. With the liquidation of these transactions the past three or four years have been chiefly occupied, and it need hardly be said that the liquidation has been a disastrous one. Some useful experience, however, has been gained, though at a ruinous price. The poverty of the country—not in an absolute sense but from the point of view of the great commerce—has been fully recognised, and speculation has been restricted within safer and more moderate limits. The hoards that were supposed to exist, ready to be expended in the purchase of all kinds of foreign commodities from eau de cologne to ironclads, have been found out to be myths; the mineral wealth of the country has been discovered to be by no means excessive, and the undoubtedly great resources of the Empire have been recognised as capable only of a slow and gradual development. We may reasonably hope that this truer perception of the real state of things will result in a healthier, though for a time restricted trade. The evils of over-speculation tend to cure themselves, though it must be admitted the cure is not a permanent one. As trade becomes settled on a sounder basis, it will, without doubt, again become capable of development, unless checked by an unwise application of the doctrines of Protection. These are the symptoms of a sort of disease through which, by a law of nature, it would seem every country must at some time in its history pass. We must not blame, though we may regret, the infatuation to which the Japanese appear to be desirous of submitting. It is only within the present generation that we have ourselves learned to escape from it, and we do not doubt that the Japanese will be taught by experience the folly of an agricultural country hindering its own development by an extension of protective principles beyond the needs of revenue. The favourite cry of the journals is Japan for the Japanese, but if this means exclusively for the Japanese it admits the justice of the retort, the rest of the world exclusively for the rest of the world, and involves a return to the old principle of isolation in a commercial if not in a political form. A laborious and intelligent people, the Japanese need have no cowardly dread of competition; they are fully able to hold their own in the course of a natural development of their resources and capacities, in those departments of industry in which the physical advantages of their country and their national genius best fit them for excelling. To shut themselves out from participation in the fruits of the industry of other nations were surely an unwise policy. The prosperity of one country does not impede but rather promotes the prosperity of other countries, as Mr. GIFFEN very well shows in his thoughtful and instructive essay. We look forward with confidence to a not remote period of moderate prosperity for both Japanese and foreigners in this country. The prosperity of either involves, indeed, that of both. The Japanese are not becoming poorer but richer, their resources are not failing but are in course of development. *Pari passu* with the increase of wealth the standard of comfort will be raised, and the demand for foreign commodities be augmented, while the power of paying for them will be enlarged. The belief often aids in bringing about the event, and the hopeful view of the future entertained by Mr. GIFFEN in respect of commerce in general, may, we are sure, be legitimately held with regard to the trade of this country in particular.

THE FAMINE IN NORTH CHINA.

(Communicated.)

THE question of sending relief to the sufferers by the famine in the North of China, seems just now to be occupying the attention of the Shanghai community. Several long letters on the subject have recently appeared in the newspapers, and a "Famine Relief Committee" has been organized which has announced its willingness to receive contributions, and forward them to missionaries resident in the famine stricken provinces, who are willing to undertake the work of distribution. The accounts which we have heard for sometime past of the famine have been of a rather vague order, but now they seem becoming more distinct and precise. Several allusions have occurred lately in the *Peking Gazette* to certain state performances of religious ceremonies in Peking, undertaken with a view to propitiate some god or gods unknown, and to procure rain. From the official intimations which are given of these ceremonies, it appears that the provinces of Honan, Shansi, Shênsi and Chihli have all suffered from the drought which prevailed during the spring and summer, and, worse still, that they are in danger of suffering again next year from its present continuance. Unless rain has fallen by this time, the last hope of sowing the fields before the winter must have passed away, and we may expect to hear of the present famine being a very prolonged one. No reliable information seems to have come to hand concerning the provinces of Shensi, and yet there appears to be no doubt that Shensi is suffering. Newspaper correspondents speak of having recently visited parts of Chihli, Honan and Shansi, and describe the impression which their visits had upon them,—which is, that the famine this year is likely to exceed in severity the famine of last year. The Chinese official mind seems to be chiefly exercised about Honan and Shansi, though it is perfectly clear that

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

it recognizes the existence of widespread want in the provinces of Shênsi and Chihli as well.

When we contrast the inactivity of the Government last year with what it is doing on the present occasion, the difference is certainly very remarkable, and it sets one wondering how it is to be accounted for. Some think the Chinese have quietly taken a hint from what is being done in India, and have tried to follow the good example which the Indian Government has set before them. Others think that the Chinese Government feels rather ashamed of the meanness of its grants last year, when compared with the comparatively large sums raised by voluntary subscriptions amongst foreigners. But perhaps a more likely solution of the problem is that the Government has good reason to fear something like the wholesale depopulation of Shansi and of a part of Honan. It appears now that the drought in Shansi has continued for something like three years. Many people died there last winter and many more are dying now. From all accounts the sufferings that may be anticipated in that province before another harvest can possibly be reaped, will be indescribably horrible. To meet this state of things the *Peking Gazette* announces with astonishing rapidity (considering it *is* the *Peking Gazette*), one decree after another making Imperial grants in money and in food, amounting in all to about a quarter of a million sterling, and 12,000 tons of grain. These grants, however, are divided between two out of the four distressed provinces, and one wishes to know what is to become of the others. Of course these grants, though they seem large in comparison with what we should have expected from China, are utterly insignificant when compared with the necessities of the case. The total population of Honan and Shansi alone, to say nothing of Chihli and Shênsi, is estimated at 37,000,000—a larger population than is to be found in the whole of Japan,—but if we include the other two provinces, the population of which is estimated at 38,000,000 for whom no provision appears to have been made, we have a total of 75,000,000! It is when we come to deal with huge figures like these that we are made to feel how, after all native resources, public and private, have exhausted themselves, there will still be abundant scope for disposing of all the funds that can be subscribed by charitable persons in any quarter of the globe. The missionaries in the North of China have sent an appeal to America and to Great Britain for aid. What response it will meet with remains to be seen, but in the meantime it appears that an effort is going to be made to raise money in quarters nearer to the centre of distress. The Reverend TIMOTHY RICHARD, whose name is well known on account of the active part he took in the work of distribution during the last famine in Shantung, has already gone to Tai Yuen Fu, the capital of Shansi, where he hopes at once to commence a similar work. He has taken with him sufficient money to enable him to make a beginning, but unless he speedily receives fresh supplies his work is likely soon to come to an end.

It is not altogether easy to feel quite as much interest in a famine the second time it occurs as one felt on the first occasion, but we suppose a person who has to pass through a famine and to encounter the prospect of death by starvations, feels as keenly about it the second time as he does the first, and though it is not so easy to contribute towards an object in which one feels a lack of interest as it is to contribute towards one in which our sympathies have been thoroughly enlisted, yet the need of our contributions may really be far greater in the former case than in the latter, and we incline to think that these remarks are applicable just now. Dr. BLODGET of Peking, a missionary of many years standing, and one who has a reputation for being somewhat cautious both in what he says and what he does, writes,—"The impending calamity is of gigantic proportions," and other testimony points in the same direction. A feeling is expressed amongst many of the residents in Shanghai that the Chinese Government ought to provide for its own poor, and that may be true, but it is not more true now than it was on the last occasion, when the same people cheerfully gave their money; and, as the *North-China Daily News* forcibly observes, "Granting to the full the inadequacy of the Government efforts,—and it must be admitted that they have lately shown much better evidence of a desire to meet the calamity—there remains the fact that a number of human beings are perishing, and will perish, for want of food during the coming winter; and we are certain that an appeal for charitable aid will not be made in vain." We understand that some subscriptions have already been paid in, and the Manager of the Agra Bank, F. W. LEMARCHAND, Esq. the Treasurer to the Famine Relief Committee in Shanghai, will be glad to receive further contributions.

SPIRIT OF THE JAPANESE PRESS.

THE TREATIES.

("Nichi Nichi Shimbun," 5th November, 1877.)

Writers have expressed various opinions with regard to the revision of the treaties, and wished that the Government would abolish the right of extra-territoriality, and obtain the right of levying its own tariffs. A draft of the treaties in their revised form has been forwarded by the Government to the representatives of each of the foreign powers. As, however, the details are not made public, we cannot say whether these questions are considered in the draft referred to. We shall therefore refrain at present from saying much on the above subjects, as discussion on such points at the present time might tend to a certain extent to hinder the Government and the foreign Ministers from coming to a speedy arrangement.

Since the signing of the treaties at present in force, certain changes have taken place, the particulars of which, when their revision is pending, we think it necessary to place before our readers.

We hear some people say that the extra-territorial clause in the existing treaties should be abolished, and the right of regulating our tariff be granted to us; that the officials of a former Government (who agreed to the treaties) have caused shame to fall upon the nation, and that foreigners have prevented us from the enjoyment of our rights. These are, however, matters of the past, and such remarks arise from ignorance of the condition of affairs in former days.

Let us glance back to the 6th year of Kaiyei (1853), twenty-four years ago. The United States Minister arrived at Uraga, and at the same time the Russian and Dutch Ambassadors arrived at Nagasaki, and treaties were accordingly made, the treaty with America in the first year of Ansei (1854), the Shimoda treaty with Russia and the treaty with the Dutch at Nagasaki in 1855. This was the commencement of intercourse with foreign countries. At this time no actual commercial treaty was in force, but in the fifth year of Ansei (1858), treaties were drawn up with America, Russia, Holland, England and France, founded on that which had been drafted by the American Minister, Townsend Harris. How great then must have been the labours of the American Minister. When the *Bakufu* decided on entering into commercial relations with foreign countries, it first made the treaty of Kanagawa. The *Bakufu* appointed the most able of its officials to deal with the foreigners on the various clauses of the treaties, but, as may be supposed, they knew nothing of foreign intercourse and had never dreamt of making treaties with foreign countries. Thus the only thing they could do was to examine and consult over the draft of

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the treaty submitted to them, but even this was like looking at a thing in the dark. Now, had the American Minister been partial and unfair, we cannot tell what kind of unreasonable treaty we might have been committed to; or had the Japanese officials appointed to carry out the negociations been fools, there is no knowing to what extent we might have been deceived. But as both Japanese and foreigners acted in good faith, matters were successfully adjusted. The British and French Ministers' followed the lead of the American Minister, which was indeed a fortunate circumstance for us, as Minister Harris desired at the time of drawing up the treaty, that the right of imposing duties should be yielded to Japan and the extra-territoriality clause be expunged.

* * * * * * * * * * *

Now Harris drew up the treaty with such appreciation of fairness, that with the yielding of the tariff question no great fault can be found. He knew that the regulations that were agreed upon could only remain in force for a short time, and at the end of the tariff clause it is stated that five years after the opening of the port of Kanagawa, the regulations concerning duties levied on Imports and Exports may be revised, should the Japanese authorities request the same.

* * * * * * * * * * * *

The treaties were therefore arranged, granting to foreigners extra-territorial rights. But as Harris says, the foreign representatives decided that the treaty should remain in force not longer than ten years, and that they would waive the question of extra-territoriality. To-day, however, we find that they are not willing to give up these unjust privileges which interfere with our rights as a nation.

The reason of this is not to be found inthe ill drawing up of the original treaty, but in those disturbances which have convulsed the country since the opening of the ports. To explain this we must refer to the changes which the tariff has undergone.

In the original draft of the Harris treaty, a duty of twenty per cent. was levied upon imports. After the opening of the ports, foreigners were cut down and so many evil acts committed by our countrymen toward strangers, that they cannot be all here written down. As at this time the *Bakufu* was growing weaker and a change in the administration was imminent, many were foolish enough to raise the cry of "Expulsion of the barbarians, and honour to the Emperor," thinking by such means to get into power, while there were actually some who really desired to close the country against all foreigners. More sagacious minds saw that the best means of overthrowing the *Bakufu* was to prevent the authorities from acting up to the terms of the treaties, which they were striving their hardest to fulfil.

The consequence of this action was that the *Bakufu* authorities were disgraced in the eyes of foreigners, and were compelled to request that the dates appointed for the opening of Hiôgo, Yedo, Osaka and Niigata might be postponed.

In the first year of Bunkiu (1861) ambassadors were sent to foreign countries requesting that the necessary delay in opening these ports might be granted, and by the treaty made in London in 1862 a postponement of five years was allowed. As a compensation for this delay, duties on wines, spirits and glass were reduced to five per cent. This was the first change that took place in the tariff, so that it was by the agreement of the Government that the import duties were reduced. But although the delay of five years was thus obtained, the clamour for the expulsion of foreigners became so violent that the Imperial Court and *Daimios* urged the authorities to close the ports. Whilst the discussion was going on, England took offence at the Namamugi affair, and the French were irritated by the firing upon foreign vessels at Shimonoseki. In the first year of Genji the *Bakufu* again sent an ambassador to France, the result of which mission was that a treaty was signed in Paris, and an indemnity of 140,000 dollars paid to the French Government, the duties on wine, sugar, iron, machinery, hempen clothes and watches being reduced to five per cent., and on glass and toilet articles and arms to six per cent. This was the second change. When such demands were made by foreign Governments on the Japanese authorities there was no alternative but to comply.

While these events were transpiring, the agitation in the country grew more and more violent. Foreigners understood the state things, and whenever a foreigner was killed by our people, indemnity was insisted on, which caused the greatest trouble to the *Bakufu* authorities. The officials in those days had so many urgent matters to deal with, that they could not rightly judge of the future consequences of their acts. Finally, in the 1st year of Keiô (1865) all duties on imports and exports were reduced to five per cent., and by a treaty made in the following year, the tariff now existing was agreed upon; and this was the third change.

These three unfortunate changes decreased to a considerable extent the revenues of Japan, while it gave great advantages to importers. Although the *Bakufu* authorities, under whom these arrangements were negociated, are blamed therefore, the real workers of the evil were those who raised the cry of "Honour to the Emperor and expulsion of the barbarians." From the opening of the port of Yokohama in the 6th year of Ansei, to the 2nd year of Keiô, when the present system was inaugurated, did these three changes occur. Men called great in those days were the cause of our misfortunes. Had they not then interfered with the action of the authorities, although the Government has changed, there is little doubt that our just privileges would have been accorded to us.

Now writers are apt to attribute these evils to the *Bakufu*, but this is unjust, although it cannot be claimed that the then system of Government was free from mismanagement. Had the officials followed the advice of Harris, and taken care after the opening of the ports that imports and exports should balance each other, we should not have had to submit to this reduction in our tariff. But what is past cannot be helped. During the ten years which have elapsed since the Restoration, foreigners have profited enough by the weakness of our former Government on account of the privileges they have enjoyed during that period, and there is no reason that they should enjoy those rights for ever.

Port and Light Dues.

("Kinji Hiôron," 3rd of December.)

Since the ports of Japan have been opened to foreigners there has been a large influx of foreign vessels, and upon various Capes and at different points of the coast, lighthouses have been erected to the number altogether of fifty. They prevent the vessels from striking the rocks, for on dark moonless nights, when the waves rise high, they show the course which the mariner should follow. Thus their benefits are very great. These lighthouses have been constructed in the foreign mode, and the works have been superintended by competent foreign engineers. The materials and machinery required for their construction had to be purchased in foreign countries, and after they were completed foreign light-keepers had to be engaged. When we therefore calculate the entire outlay, including the hire of native labour, each lighthouse on an average costs about ten thousand *yen* to maintain.* In such a case some means must be devised for defraying the expenses incurred.

The light of the sun is a free gift to all men, and whether Japanese go to foreign countries or foreigners come to Japan, the sun makes no charge for the light that it gives. But light obtained by artificial means is not universal like the sun. Its production costs money, and it is thus only fair that some charge should be made to meet the cost of the lighthouses. It has comes to our ears that foreign vessels sailing around our coasts wherever they please, pay nothing for the advantages afforded by these warning lights. Thus we are justified in supposing that foreigners imagine such lights to be as free to them as the natural light of the sun. Why does not the Government demand the payment of certain dues? It must be because there is no such stipulation in the treaties. Now postal systems, telegraphs and railroads are recent introductions into our country, and both Japanese and foreigners are compelled to pay for the privileges such institutions afford them. In time, as they are more extensively used, not only will they pay back all the cost, but will yield a certain amount of profit. Surely lighthouses may be allowed to rank with such works.

In cases where beacons have been erected by private enterprise, although they may not be of perfect construction, nor the light they give shine very far, a certain tax is imposed on all native vessels which make use of the same, in order to get back the cost of their erection, and to ensure their continuance. The Government should therefore devise some means by which the expense of constructing and maintaining the lighthouses it has erected should be defrayed. This can only be met by imposing the payment of certain dues on all vessels, whether native or foreign, which make use of these lights. However avaricious foreigners may be, we think they have sufficient sense to distinguish between the cost of the sun's light and that afforded by lighthouses, and if the Government should demand these dues, there would be no cause for them to murmur.

In glancing over the Customs' report, we find that the number of steamers and sailing vessels which enter and leave the ports

* This is an error. The lighthouses cost from 500 to 8,000 dollars per year according to their size.—Ed. *J. W. M.*

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

yearly, are not less than one thousand. Now supposing that a tax of thirty *yen* is imposed on each vessel, this would in one year increase the revenue by thirty thousand *yen*. Such a sum may not seem to the Government of great importance, but there is no reason why it should be overlooked. Now that the revision of the treaties is under consideration, the Government would do well to consider this question.

Tonnage dues are taxes levied on vessels according to their carrying capacity and the length of time they remain in port. When vessels enter a harbour they should be placed under control of an officer in charge of the port, and not be permitted to move about at their own discretion. If the vessel be of large size or if she remain at anchorage for a long period, she should be called upon to pay dues accordingly. This is in accordance with European and American customs. Nor is such a tax imposed alone in western countries. It is collected in China, and tonnage dues are included in the mercantile regulations. All vessels above 150 tons are taxed what is equivalent in Japanese to 66.4 *sen* per ton, vessels below 150 tons are charged 16 *sen*. When this sum has been paid, a pass, good for four months is granted by the Chinese authorities, and vessels possessing this permit can enter any port in China free of charge. After the expiration of the four months, the pass must be again renewed by the payment of dues.

When Japan made the treaties with foreign countries, her Government was ignorant of the existence of these systems, and therefore the question of tonnage dues is not touched upon in the treaties. An agreement was thus entered into to allow all vessels, of any size whatever, to enter a port, and remain any length of time, for the one payment of $15 on entering and $7 on leaving port. These port dues are the only tax on the vessel. If the sum of $15 is paid a vessel may remain in port for the term of a year. Indeed, some of the worst of them, after remaining here one and even two years, became so rotten that they were made into store vessels, and the authorities have no power to do away with them. Now that the time for the revision of the treaties has arrived, let us hope that the Government will reform these matters. The number of vessels entering and leaving our ports will, we imagine, represent about 500,000 tons. Supposing that twenty *sen* per ton were charged, and an extra charge made for all vessels remaining over three months and for store ships. This would give a revenue of nearly a million *yen*, while the amount of all ports dues at the present time is barely one-fifth of that sum.

As these questions have reference to the treaties and revenue of the Government, and are matters of no slight importance, and which cannot be overlooked, we have considered it necessary to bring them to public notice.

REVIEW.*

The work before us is so exhaustive, so excellent, and we may say, in the main so correct, that to review it, completely would be no light task and would occupy more of our space and of the time of our readers than we or they can afford. We will, therefore, content ourselves by saying of the book in general, that it is written in elegant French, is lively and entertaining, and conveys a vast amount of most valuable information upon this interesting country and people. The author shews himself in every page a deeply cultured man, who has thought carefully and lovingly of his subject, and for whose conclusions we must feel reverence even when (in certain rare instances) we cannot agree with him. We hail these two volumes as by far the most valuable contribution to Western literature on Japan that has been made of late years, and recommend all, even those old residents to whose pride in their having been amongst the pioneers of the open ports M. Bousquet makes some good humoured allusions, to indulge themselves with the perusal of his book, which has not a dull chapter in it, and which can tell even them of a great deal they never knew.

With these very cursory remarks we will pass to a rather more extended examination of one of M. Bousquet's most interesting chapters—that on "Art," which is divided naturally into sections, Architecture, Sculpture, Painting Music and the Decorative Arts, with a concluding summary. The author begins by saying, we think very happily, "The moment has arrived to summarize the character of Japanese art; it has attained its maturity and has given all that it is capable of producing. From symptoms only too certain we can recognize that the hour of its decadence has commenced. Like Egypt in contact with Greece, Japan in communication with Europe has not known, up to the present time at least, either how to preserve intact its classical traditions or to refresh them by a happy infusion of foreign elements. It shows signs of feebleness and of the degeneration of taste which characterize periods of decline. A noble past is disappearing, a brilliant epoch has closed; is it not the right time to gather its vestiges and define its features? A delicate task, for it is not only requisite for us to perfect for our readers the knowledge they already have of Japan, but to define a particular phase of the artistic life of humanity to present to them a face of it unperceived or but imperfectly known, and to determined the laws of beauty conceived by a race which has not drank at the sources which have inspired our own."

The unhappy liability of this country to earthquakes has dwarfed their architecture and confined it for all kinds of buildings, from the temple or the palace to the peasant's hut, to one of the most perishable and ignoble of materials, *wood*. Thus, Japanese architecture is under so immense a disadvantage when put in competition with European, that it can hardly be considered except as a style *sui generis*. The immense size and weight of the roof in the temples, and the way in which it overshadows the habitable part of the building, are well noticed. The inconveniences of a Japanese house, where one must either keep the servants altogether beyond call, or be overheard by them, or irritated by their chattering, are certainly grave drawbacks to its cleanliness and picturesqueness. Life in houses whose walls are only sliding panels of wood and paper, has necessarily little of the privacy which Europeans desire. The author thinks he sees in the forms of Japanese architecture the traces of the descent of these people from monad Mongol ancestors, and as regards the roofs of Shintô Miyas we entirely agree with him, for in them the four crossed sticks supporting the long ridge pole of the primitive tent are repeated to this day with exact fidelity. Architecture can never become a great art in a country where earthquakes necessitate the extensive use of wood, and fires sweep away, every few years, all traces of buildings but the simple foundation stones.

"The trees and the fields have nothing to teach me," said Socrates. "Nature hides God from our sight," said Jacobi, to the great indignation of his friend the pantheistical Goethe, and it is with Goethe's opinions that the Japanese most certainly agree. Throughout all their art the distinguishing characteristic "is the genuine and almost extravagant love of nature." This, however, they are unfortunately content to receive through teachers who have shewn how everything is to be drawn, and no modern Japanese artist thinks of sketching from nature. Some painters of real genius in the past, such a Hokkusai have shewn how to draw, say, a sparrow flying, perching, hopping, each in four or five different positions, and every student is taught to draw each of these in so many strokes of the pen no more and no less, just as our children are taught to write a capital letter. The result is that the power of drawing cleverly is extremely widespread, almost as much so as the power of writing well, but that having been taught on the same model all Japanese will draw a sparrow flying the same way, reproducing the four or five positions with mechanical accuracy. It is very pretty, very natural, or very quaint, but shews a total absence of originality, and a quite servile turn of mind; but how great must have been the genius who could break through the *copying of some one else* that no doubt existed before *his* own time, and give to his countrymen the next best thing to teaching them each one to sketch from nature for themselves, *i.e. excellent models to copy!*

Sculpture has never flourished in Japan and M. Bousquet says:—"And in fact what is man in the Chinese philosophy transmitted to the Japanese? A perfectly passive being, condemned to life and to suffering as to a painful trial before re-entering the state of impersonality, and being absorbed into the universal essence which alone exists from all eternity. Man has no active destiny, it is not his duty to modify the face of the world, that is the business of the Supreme Intelligence; he has only to observe the laws dictated and the rites required by the mouth of the Emperor. A slave, submissive to the divine and

human powers which crush him, chained for a time to this earth on which he will leave no trace of his sojourn, what need has he and what right—ephemeral creature that he is—to tell generations to come in immortal language, how he has carried his burden for a day? He may build temples for his Gods, palaces for his Heaven descended masters, execute colossal images of the Divinity, but as for his own form, it is not worthy of being represented and translated into stone." Comparing the effect produced on sculpture and painting by Buddhism and the Confucian philosophy, with that produced by early and mediæval Christianity, our author finds it much the same, viz., a contempt and hatred of the beautiful human frame, as the mere clay tenement of the soul, and full of weaknesses and diseases. We must, however, here remark that middle age Christianity produced Ecce Homos and Madonnas whose beauty and pathos we are now quite incapable of rivalling, and the Buddhism of the same period has given us the grand and impressive Daibutzu of Kamakura. Of this M. Bousquet says: "Buddha is not in fact an indigenous creation, it has not sprung spontaneously out of the thoughts of the nation as did the Olympian Jupiter, the Minerva Polias, or the face of Christ. It is a foreign importation thrown on the land at the same time as Buddhism, and has multiplied itself without variation and without original addition in proportion as the faith extended itself."

"It is then to India the native country of Buddhism, that we must do honor," and after giving reasons for believing so, our author goes on to say:

"Buddha, as represented, is neither Man nor God, it is the Living Spirit, the Visible Conscience, it is the Great Soul of Humanity, absorbed in the contemplation of the absolute, and striving by a prodigious concentration of thought to comprehend the laws of the universe."

Our author thinks that it is mainly to its vast size that the Daibutzu of Kamakura owes its deeply impressive character, but we cannot agree with him there. The figure is an enormity and an outrage on anatomy, which great size only makes more hideous, but this dreadful drawback is forgotten in the sublime religious reverie expressed in the countenance.

In Sculpture the Japanese never attempt to master the difficulties of the nude, and in this again their art resembles that of mediæval Christianity, which would never have given us the Apollo and Venus, which are the delight and envy of the world. Christianity as strongly objects as does Buddhism, to the Greek glorification of the beautiful human frame, and it is only since the Reformation,—since men have shaken off bigotry, that they have made the least approach to the perfection attained in carving the human figure that was so common amongst the Pagans.

In Painting, owing to the system already noticed of drawing after certain recognized models, the different masters can only be distinguished by the delicacy of their execution. The following is excellent:—

"It is above all by fineness of work and happy management of colour that Japanese painting commends itself itself to us. It knows by tradition the precise science of colours, it has learnt the law of contrasts and complementaries but it does not see the poetry, the emotion of colour such as Titian shews it us, it only mechanically applies received rules, without rising above a technical process. All the rest is but a manual operation; these elegant stems, these light petals scattered with an apparent abandon, are executed after a multitude of received models which every painter has in his head and at the end of his fingers, as a pianist has his favourite air. He has never thought of considering nature to imitate her direct, he copies for ever, a type determined once for all."

In this light how immensely great appear those few geniuses who must have emancipated themselves from this invincible propensity of the Japanese mind to love the precise and ignore the ideal. Those prophets of art were too high above their own or subsequent ages to have any disciples who could follow in their footsteps, and, as they did, take sweet counsel of Nature herself. They could only copy the great works of their teacher as a parrot copies the sounds of words he hears, and fighting about a finnikin fineness of work, lose the path which, had they been imbued with their master's spirit, would have led them to worship and learn for themselves at Nature's shrine, rather than from one, but a student himself, however skilful.

The section on Music and Dancing is of no great length, and we shall content ourselves with saying that the origin of the musical instruments is traced, and the primitive nature of the music, with its irritating effect an European ears, described. Music and dancing and the drama have been as closely connected with religion in Japan, as they are now known to have formely been amongst Western nations. The "*No*" in particular, grave, majestic and elegant, has all the characters of a Mystery, and impresses with religious, rather than jovial feelings.

In the Decorative Art the Japanese really excel, and we have much to learn from them. M. Bousquet says, "Go to the house of a Japanese who has remained faithful to olden customs, and you will not find in those plain but elegant apartments any of those optical discords, those outrages on the eyes which almost always disfigure the rooms of our middle class. Give some flowers to a gardener or a young girl, they will know by instinct how to arrange them in an unsymetrical bouquet, which will have the piquancy of the impromptu. In this respect the Japanese surpass the Chinese. While the latter follows his industrial arts, minute, punctual, barrenly methodical—in short a conscientious barbarian, his neighbour gives himself up to the rovings of fancy with the *abandon* of an artist."

The intense clearness of the atmosphere in the autumn and winter, and the gay colours of the landscape at those times, bathed in floods of golden sunshine, are well known to us, and are very happily rendered by the Japanese with their usual boldness of colouring. "What a pity it is to see these natural gifts destroyed by the imitation of European art—to see our timidity of colouring succeed to this happy abandon, the secret of these lovely harmonies lost and the genius of the old porcelains give place to the vulgarity of the new."

Of course, M. Bousquet notices the vast difference between lacquer, porcelain, pictures, etc., produced now for sale, and the old *bibelots* which alone have a great and increasing value,—increasing, we regret to say, because Japanese art is dead and will never again produce such gems. The decadence of workmanship as well as taste is terribly rapid, and its progress could be distinguished even between the objects sent to the Vienna and those exhibited at the Philadelphia Exhibition. Europe has introduced her hurry, her restlessness, and the native workman will not now willingly devote months and years to the production of a cabinet or a bronze. Japan was the last country in which it was not the highest duty of man to produce quick, and cheap, and no true artist can see her too taking her place in the ignoble struggle, without deep and bitter regret. Where are we to look in the future for true, patient, loving work done for the sake of the art and not for the coin it produces?

M. Bousquet sees a want of high æsthetic aim in Japanese objects of art, and thinks that Europeans are in danger of too much admiring them,—in fact of European art being corrupted by them. We see nothing of such a danger. Japanese ornamentation has much improved our taste, and led it into new and pleasing channels. To our mind the contact of Japanese with European art has resulted in the unmixed loss of the first and great gain of the second. It is true that their art is circumscribed, finished. It has done all it can do; there were no signs that it would ever produce again a great and original genius. That was its state before the treaties, and there it would have remained stationary, but for the intercourse with Europeans and the invincible propensity for imitation in the Japanese mind, which up to the present time, have ruined native art without teaching them our own. "A distant future will teach our descendants if a long contact and a continued effort can soften the inexorable laws of ethnology, or if on the contrary a race must carry for ever the impression of the primitive mould in which it was cast." These are M. Bousquet's concluding words, and here to our regret we must take leave of this most interesting subject ably treated by a clever and elegant author, with our sincere thanks for the pleasure and information he has afforded to us, and to all who are interested in Japanese art.

OUT OF BOUNDS:

Being an Account of a Recent Trip into Shinshiu.

(Continued.)

I found the hotel at Kôfu, kept by Okumura, and situated on the main street of the town, very clean, quiet, and comfortable, though quaint in construction, as it consisted of a series of godowns,—I never could find out the exact number—huddled together round a tiny court yard, containing the inevitable rock work and stone lantern, and miniature shrubs and pond with gold fish. I fear that these said fish, by the way, suffered much from my presence, as the contents of the *chōdzu-bachi* (copper pans used for washing hands and face) drained into their dwelling place, an arrangement which must have caused them immense discomfort in view of the extreme use of soap to which I am addicted. Indeed, on the third morning of my stay I was much concerned at observing two unhappy inhabitants of the pond in an extremely feeble condition, floating sadly on their sides, an occasional flapping convulsion showing that their unaccustomed diet had disagreed with them. Then again, my room being situated at the top of a very steep and polished stairway on the second story of one of the godowns, whose entrance was artfully concealed in an unexpected corner, was only approachable over several chasms bridged by a single slippery plank, difficult enough in the daytime, but which to endeavour to find in the dark was an enterprise

> "As full of peril and adventurous spirit,
> "As to o'er walk a current roaringloud
> "On the unstedfast footing of a spear,"

and rarely performed without the stubbing of a toe or the barking of a shin. The doorways with their massive doors and heavy black lacquered steps had a somewhat tomb-like aspect, and as I was the sole tenant of the godown, when I was shut in my dormitory for the night, with only the dim light of the oil wick to comfort me, nervously sleepless with the inquisitive advances of the rats, it was not difficult to imagine myself the prisoner of Chillon, or any other poor immured wretch whom man and time alike seemed to have forgotten.

There was still another peculiarity about this clean and quiet hostelrie, and that was the maid servant, who seemed to do the entire work of the house and who was specially told off to wait on myself. Never has it fallen to my lot to behold such appalling, superhuman ugliness as was possessed by this young female. Words fail in attempting to describe it, and nothing but a photograph could do any justice to it. A face of gigantic size, of which the small-pox had taken advantage to display the most grotesque efforts of its scarifying powers, set off by a mouth like that of Jonah's whale, garnished with a large sized set of blacked teeth. A body of breadth unbounded, finished by hands and feet possessing unequalled facilities for dropping and tripping up. A head of hair that had not seen the barber's comb for an unknown period, which after a windy passage across the courtyard and a struggle up the slippery stairs, burst from all its lashings of bits of coloured crape and wisps of paper, and drifted everywhere in wild confusion. Whenever I heard my Hebe coming with a step like the monster Polyphéme or the Commendatore in Don Giovanni, "*se sentiste come fa! ta! ta! ta! ta!*" I was prepared for some terrible catastrophe, and generally were my expectations fulfilled. Once she astonished me by sprawling full length and breadth into my room, bringing down a paper slide and depositing my own and my servant's breakfast in dire ruin at my feet. On another occasion, as she reached the top step of the staircase with two trays of dinner, she horrified me by uttering a loud shriek, and shaking the whole godown by falling, in a series of bumps and somersaults, amid a cascade of soups, fish and pickles to the bottom. But she only laughed when we rushed down to ask if she was hurt. This was all we could do, the picking up of such a massive body not being a thing to be thought of for a moment. And then she always laughed. Nature, who, cruel as she is in many ways, generally gives some compensation for the graces she too often denies, had endowed this poor drudge with the most perfect amiability and joyousness of temperament. No matter what happened to her; no matter what duty she had to perform, she laughed. It was a laugh, too, that could be heard, for her voice was in proportion to her bulk. But for all that it was hearty, and it did you good to hear it, for it showed you that in spite of all its shortcomings life was not to her a joyless thing. At all hours of the day, and often of the night, I could hear her voice and her laugh in the kitchen—and I preferred it at that distance—mostly echoed, too, by her masters and mistresses, of whom there were several, who let her do all the work, but were quite willing to share her merriment. It was of no consequence what question you asked her, or what request you preferred. There came the invariable shout of "*Sayo de gozarimasu*" accompanied by a grin, which enlarged into a chuckle and finally dissolved in a fit of uncontrollable laughter. At first I used to look serious, but finally I caught the infection, and hence my meals ought to have nourished me if laughing be good for digestion. Then her forgetfulness was astounding. Regardless of the perilous passage of the staircase and the distance which separated my apartment from the kitchen, she never brought all that was required except after a series of journeys. The rice came without bowls; the fish was brought without salt, while the necessity of chopsticks never seemed to occur to her. But it was all the same. On calling attention to the omission there was the inevitable "*Sayo-de-gozarimasu,*" followed by the sound of a paviour's rammer going down stairs accompanied by shrieks of laughter. On one occasion I thought I would awe her into silence, and with that view induced her to look at herself in the concave side of my shaving glass. Bitterly did I regret my rash experiment, for not only did she laugh herself nearly into a fit, but on every available occasion did she take the opportunity of repeating the performance with the same inevitable result.

The Japanese waiting maid! What historian shall be found of her virtues of kindness, politeness and untiring good nature? What poet shall arise to sing her praises? And yet many a more unworthy subject might be found for the pen than to bear witness to her thoughtfulness, her cheeriness, her ready helpfulness. Oh, foreign travellers in Japan, whoever you be, engineer, miner, surveyor, professor, rest seeker, globe trotter, which of you will not bear testimony to her worth. Cold, wet, hungry, footsore after a weary tramp, you arrive perhaps late at night at the welcome *yadoya*. "Ho, an honourable guest! Welcome, Sir, welcome! Please come in immediately. Ah, those boots, how troublesome they must be, but here is the foot bath. Too cold? More warm water. There, is not that just the thing? Indeed, indeed, the gentleman must be tired; and that blister too! *Oya! Oya!* How painful it must be. *Hé-é*, the gentleman must not trouble himself. Here is the towel and I will carefully wash and dry the honourable feet."

Then with what a respectfully protecting air does she conduct you to your room, and bustle about as though your visit were a rare favour conferred especially on herself, and of which she alone should reap all the benefit. "Here is the honoured cushion, will not the gentleman please sit down. And the tea; the gentleman will please take a cup, and some of these sweetmeats. Indeed, it is an indignity to place such worthless things before him, but—Ah! what lovely rings! will not the gentleman permit her to look at them. *Dó-ó-mó*! How beautiful they are, and gold too? Ah, if she had one such it would indeed be a great thing. But foreigners are so rich and in her country, alas! they cannot—but what will the gentleman like for his supper?"

And when the meal is over and the mattresses and quilts are brought in, how anxious she is that you should lie soft and warm, and how carefully she places the screen around you that no wandering air of night may find you out and disturb your well earned rest. How deftly she rolls up your pillow, and bidding you lie down spreads over you the newest and softest coverings the house can afford. "For indeed the gentleman must be much fatigued, and is he quite sure that there is nothing more he wants. Nothing? Then she will say good night, and may he sleep well. *Oya!* she has forgotten the oil in the lamp. And the water and cup are at the side of his pillow. At seven o'clock? Yes she will call him at that hour. In that case once more may he rest well."

Oh! neat handed, black eyed, rosy cheeked, cheerful, uncomplaining, hard worked waiting maids. How many thanks do I and my fellow travellers owe you for all your willing help and ready welcome to us foreign barbarians. Too ready are we all to accept your services and too careless in acknowledging what we owe to you. Some day may some able pen be found to worthily inscribe your many virtues. Ohatsusan! Otakisan! Ohanasan! never "uncertain, coy or hard to please" but always to be remembered as ministering angels, to all of you greeting!

I was much struck by the improvement in the town of Kôfu since I last visited it four years ago. Then it was extremely dirty, extremely dull and extremely uninteresting. Possibly too the weather had something to do with my dislike of the place, as it was snowing and bitterly cold. On this occasion I found myself on a bright sunny morning in a remarkably bustling active little city, with more life and movement and briskness than is usual in any of the smaller Japanese towns. By a fire that took place some time after my first visit, a large portion of the city had been swept away, and advantage had been taken of the calamity to widen the streets and rebuild in a much more imposing if not actually substantial manner. Certainly as far as architecture is concerned the attempts at imagined foreign styles are about as lamentable as anything can well be. The models must certainly have been taken from the boxes of German toys before mentioned, while the materials used in construction are thin laths covered over with plaster or whitewash, to give an air of solidity to the building. This pretence is all very well until the first heavy rain or violent wind, when if the whole edifice do not come tumbling to the ground, the plaster drops off, leaving unsightly patches which reveal the skeleton of the miserable sham. Still there is an air of cleanliness and neatness about this portion of the town which is remarkable, and might be imitated with advantage elsewhere. There are one or two good schools; a native hospital, situated in a pleasant and airy situation, and judging from outside appearance, all that could be desired and more than could be expected. The new *Kencho* is a very large building, now almost completed. It is three stories high, with façade with clock tower, and two wings. The chief aim of the architect appears to have been to pierce his walls with as many windows as possible, and I could not help hoping that if this style of building is to become popular in Japan, the Government would sieze the opportunity of largely adding to its revenue by imposing such a window tax as formerly existed in England. Nothing can well be worse than the taste—or rather the want of it—displayed in this building, while added to its unsightliness is that painful sense of its instability and ephemeral nature, which is characteristic of all similar buildings. That such a feeling was not groundless was proved by the complete demolition of the silk works, erected on foreign plans by a corporation of Kôfu. These the recent gale had compelely destroyed, all that remained being the outer offices and five or six tall brick chimneys, which stood erect among a mass of debris of planks and beams and plaster and twisted iron rods, showing that the whole structure must have been as flimsy as those now in course of construction, and which will certainly meet with the same fate when subjected to a similar strain.

The town as I have said bore a very busy air. The shops were well patronised and the people all looked bright and cheerful. There are some very good shops, several of them—notably a bookseller's,—in semi-foreign style. All kinds of foreign goods can be found, from champagne of unknown excellence—judging from the gold corks and elaborate labels, of which the favorite seemed to be a portrait of the Empress of the French in brilliant colours—to five cent tin boxes of American blacking. The prices, too, were reasonable, for I made one or two purchases of warm underclothes at a less price than I should have had to pay in Tôkiô or Yokohama. There appeared to be also a considerable consumption of beef, for there were at least half a dozen places where this and venison only were sold. It was, however, of poor quality, very tough and without a particle of fat. There can be no doubt that horse flesh is often substituted, and I have something more than a suspicion that I partook of it in a *knabe*, though my boy who induced me to eat thereof, under the representation that it was meat such as my soul loved, did not disclose the awful secret until two days afterwards, when we were miles on our road out of Kôfu, which reticence was fortunate both for him and for myself.

The old castle of Kôfu—one of the Tokugawa strongholds—is apparently entirely destroyed. The outer walls surrounding the moat remain, but I was allowed to push my inquiries no further, a most decided refusal being given to my request by a gentleman evidently belonging to the old *régime*. The view from the castle site is fine, embracing the whole of the fertile, well watered plain of Kôfu, with its ripening crops, and its numerous villages and hamlets, bounded on all sides by bold precipitous mountains, which apparently shut it out entirely from the rest of the world. There is evidence on all sides that the inhabitants of this happy valley are industrious and flourishing, while the *Ken* authorities are said to be, and there is ample proof that they are so, singularly able and energetic. One has only to look at the capital roads, the numerous schools and the general surprising improvements that have taken place in the district during the last four years, to see at once that the mountain barriers which surround Kôfu have not been able to shut out the spirit of progress and enterprise. I was also told that the regulations of the *Ken* were enforced with extreme strictness, and were like the laws of the Medes and Persians. The only example that I had of this was afforded me by my servant, who wore his hair in the old fashion, tied in a queue. On the morning of my leaving Kôfu I ventured to remonstrate with him on the extremely dishevelled and disreputable appearance of his hair, which was generally dressed with the utmost neatness but had now been allowed to go unkempt for several days. To my surprise he told me that he had been to every barber's shop he could find, but that no one would dress his hair, there being a strict law in the *Ken* that all the inhabitants should wear their hair in foreign style, and although travellers passing through the district who adhered to the old fashion could not be interfered with, all barbers were strictly enjoined not to dress the hair of such persons under penalty of reprimand and a fine of ten *sen*. I then saw, what I had not before remarked, that without exception all the people had their hair cut in foreign style, and my servant's statement was verified by my landlord. Surely this law might be relaxed a little, at least as far as the wants and comfort of travellers are concerned.

I had intended to leave Kôfu early on Monday morning, after my Sunday's rest, but although I had so previously ordered, I waited for an hour in vain for my breakfast. Impatient enquiries at last elicited the fact that the sole prop of the house, my ponderous waiting-maid, had been taken suddenly ill, and "would the gentleman kindly come and see her, and give her some of his honourable medicine." The gentleman, deeply moved at this sad intelligence, went immediately as requested, and sure enough in a dark corner of the kitchen, shut off by a screen, lay unfortunate Hebe no longer laughing, but in all the agonies of frightful colic. I feared that it was an attack of actual cholera, and indeed the poor girl's condition was alarming. Fortunately I had taken the precaution to provide myself with certain cholera specifics, and by administering these freely, and by the shock to the system caused by the breaking of one of the bottles of hot water which I had ordered to be applied, I had the satisfaction after a couple of hours of hearing the ghost of a laugh, when my patient was able to announce to me that she felt better. The delay thus caused compelled me to abandon the intention I had formed of going on to Daigara by an old and somewhat difficult mountain road, on which the scenery is said to remarkably wild and grand, and to follow the more direct but less picturesque route of the Shinshiu-kaido.

The Chinese Consul who arrived here yesterday in the Chinese frigate *Hoi-hon*, has taken up his quarters in No. 1, Bund, the house till recently occupied by Messrs. Wing Cut Cheong, while this enterprising firm have removed to No. 3, Megasaki, in which the Danish Consul, Mr. H. M. Fleischer, till lately had his office. This house we hear has been bought by the Chinese firm for $2,500, and has been repainted and made gay.—*Nagasaki Rising Sun.*

QUID PRO QUO, OR, WHAT FOR WHAT, OR, WHAT WILL YOU GIVE ME FOR WHAT I GIVE YOU?

To the Editor of the "Japan Weekly Mail."

Tôkiô, December 7th, 1877.

The *Japan Herald* has accused the Japanese Government and people of being very desirous of gaining great privileges and rights in connection with the questions of independent sovereignty and jurisdiction over foreign residents, in return for which he says we are not willing to give any proper equivalent; but as was shown in the reply to his article headed "*Non Possumus*," his logic is quite illogical and his own words are more applicable to his own inconsistent and incoherent reasonings, than they are to any claims that have been advanced by any advocates of our independent sovereign rights. The *Nichi Nichi Shimbun* very justly compares the editor of the *Herald* to the "*Clumsy Man*" who lays hold of a heavy beam and swings it above his head intending to smite his adversary, but only succeeds in cracking his own noddle!

If we can understand the fussy prating talk of the *Herald*, he is not willing to grant to our Government its full sovereign rights of jurisdiction over foreign residents, even though we concede to these foreigners all the rights and privileges enjoyed by natives, and allow them to travel and reside everywhere, over all our country, and engage in any business or occupation that is lawful for natives. Is he not therefore guilty of the very fault of refusing a *quid pro quo* which he wrongfully charges upon us, and do not his own inconsistent arguments fall upon his own head? We believe that our Government is quite willing to give a fair *quid pro quo*, or equivalent for any concession which it would desire to ask from foreign Governments in the now pending revision of the treaties, and if we should succeed in recovering all our just rights of independent sovereignty, and foreign residents should become subject to our jurisdiction by the abolition of their rights of extra-territoriality, still they would not be without the protection of their own Governments. There would still remain the foreign Ministers and Consuls, who would have the right to look into any abuses that might occur, and to demand of our Government the redress of any serious grievances of which their own people, resident in our country, might have just cause to complain against us, and so still they would have their remedy.

Moreover, our Government would find it indispensably necessary to take special care to protect the interests and rights of foreign residents, when under native jurisdiction, in order, if possible, to avoid all diplomatic complications on this account.

So we may clearly see how little danger there would be to foreign residents in giving up their present extra-territorial rights, as well as how unjust it is of them to claim all the rights and priviliges that are enjoyed by natives, without submitting themselves to the same jurisdiction that natives are subject to.

Nevertheless, if the foreign powers will still persist in preventing us from granting to their people, resident among us, all the rights and privileges which they desire, by rejecting our just claims of independent sovereignty and jurisdiction, yet we have an undoubted right, and we should assert our right, to regulate our internal revenues to suit our own ideas of our own advantage and convenience, by reducing the duties upon exports or increasing the duties upon imports, without asking the permission of foreign powers to allow us to do so. Our silk and tea, when imported into Europe, pay far heavier duties than we are present allowed to put upon their woollen and cotton goods, when these are imported into our country; and yet we are not allowed to interfere with the internal revenues of European countries, to demand that our products shall be admitted there at the same duty at which their products are admitted here! This is a manifest violation of the principle of *quid pro quo* or reciprocity, to which, if only for the sake of self-respect, we ought not longer to tamely submit.

No nation in the world claims the direct right to interfere with the internal and domestic affairs of another nation, and where any such interference appears to exist, it is only by mutual treaties upon the principle of reciprocity, where one grants to another what is requested upon the agreement that the other shall grant in return what the first party desires. This is called "International equality," and now that by lapse of time we are free from the very disadvantageous terms of former treaties, we should assert our right to regulate our own internal revenues, as shall seem to us best, only making such concessions to the desires or demands of foreigners as we may feel quite willing to grant in exchange for any reciprocal advantages which they may offer to concede to us. The time is past in which we should yield to unreasonable demands made upon us, supported only by the pretentious power and *prestige* of overbearing and greedy seekers.

In ancient times the intercourse of nations, as well as individual persons, was regulated more or less upon the principle that might makes right, and superior power was allowed to domineer over weakness. But the advanced civilization of the present age has declared in favour of the principles of right and justice, and the rights of the weaker are now respected.

Such being the sense of modern civilization, how ridiculous do the pompous and fussy dissertations which we are now almost daily favoured with in the *Japan Herald*, appear in the broad sunlight of to-day!

The writer in that paper fancies he sees something in the claims put forth by the native papers for the recovery of our national independent sovereignty, at which he is greatly amused, and like a monkey looking at his own image in a mirror, he thinks that he is looking at another person and so he goes on with his grimaces, scowling and chattering, and sometimes getting into a great rage, because the reflection of his own likeness will persist in mimicking all his own antics!

He chatters to it about the "Czar," and thinks to make the other monkey keep quiet by great threats about Russian power and lust for the acquisition of territory!.

He prates about "Carpet Baggers" who "fool the Japanese to the top of their bent." Will not some kind friend drive the monkey away from his mirror, lest he should injure himself by over excitment at the mocking mimicries of his own likeness in the glass, or go out of his wits on account of the supposed "inability of the "Japanese to discriminate between those who are com-"petent and those who are not to assist them in their "affairs."

What a pity it is that the great abilities of the monkey are not more appreciated by the rulers of our country!

This Russian scare-crow *(Ka ka shi)* does not frighten us much, and he will have to use more skilful "flattery," and "crawl more humbly in mire" before we shall be prepared to accept his pernicious advice.

For the present we must distinctly and emphatically say "No," to all such proposals and suggestions of advice as are held out to us by the *Japan Herald* and all of that fraternity." The article referred to appeared in that paper of the 24th November.

RENAISSANCE DU JAPON.

[Our correspondent is not quite accurate in his facts. No Japanese tea worth mentioning is imported into Europe. Silk, raw or manufactured, pays in England at least, no duty whatever. No textile fabrics, indeed, or the materials for them are dutiable under the tariff of the United Kingdom.—Ed. *J. W. M.*]

To the Editor of the "Japan Weekly Mail."

Tôkiô, 5th December, 1877.

Sir.—Your reference to a report which bears my name calls for one word from me. I am, of course, alone responsible for any expession occurring therein, and I am therefore somewhat glad to find that your ingenious phraseology contradicts nothing which has been so cautiously stated by me. I am deeply pained, however, to think that you should seem to ascribe (altogether unjustly) to me *personal* disrespect towards the honoured Representative of my Sovereign. Conscience and a sense of public duty have indeed compelled me to criticise, in terms *severe* rather than acrimonious, a public act which has never yet, I be-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

lieve, been *directly* defended, nor can I see that there is anything wrong in this till *conclusive arguments* show that the act itself was right then, and is needed now.

Your reference to the 'respectable body' to which I have the honour to belong reminds me that Macaulay (History of England I, 47) ascribes to a little, but rather noisy, Scotch congregation in Edinburgh, the salvation of the liberties of England; and in an old formula still used by the Church of Scotland, in reference "to the chief members" of the state, these suggestive words occur:—"It concerns the whole Kirk to have those *well seasoned* "who apparently are to be instruments of keeping this "Kirk and kingdom *in good temper;*"—a task, by the way, which was always found very easy when constitutional rights and forms were observed.

Your cleverly sly, and rather mischievous allusion to Juvenal, the "denouncer of the brutalities of tyranny," as he is called, amused me greatly, especially in view of the few lines which precede and follow your quotation.

And now,

"Wise men, something still conceiving
Like the true.
* * * * * *
I the end of all disputing
Show to you."

The upshot of this interesting little controversy will, in short, as I venture to predict, be the substitution for the existing regulation, of another, simply requiring *British subjects to obtain permission from the Japanese officials before publishing newspapers in the vernacular*, the profound *practicalness* of which suggestion it is hardly necessary for me to point out. It is only somewhat sad to reflect that it was ever thought necessary for Englishmen to meddle at all with a branch of legislation which properly belongs only to the government of this country—I mean, of course, laws affecting the Native Press. This I hope a well-meaning Scotch pertinacity, which is by no means exhausted yet, will enable the practical wisdom of Englishmen to perceive and act upon, and I would venture to express the hope that His Excellency, who, I am sure, desires to aid rather than impede mission work in Japan, will on reflection see it to be right to aid in removing a grievance which can be removed with injury to no one, but with satisfaction to all. Then, indeed, I promise you, that 'good temper' which the stern Auld Kirk looked upon as so desirable a condition and which Scotchmen are always sighing to have an occasion of *conscientiously* manifesting, with be the permanent quality of

Your obedient servant,

H. FAULDS.

Law Reports.

IN H. B. M.'s PROVINCIAL COURT, KANAGAWA.

Before H. S. WILKINSON, Esq., Acting Law Secretary.

Wednesday, December 5, 1877.

NOGUCHI YAHACHIRO *vs.* H. COOK.

(Adjourned from the 28th ultimo.)

This was a claim of $300, balance of the purchase-money, $700, for three spars sold by plaintiff to defendant, and of which $400 had been paid.

Defendant denied indebtedness on account of the utter worthlessness of the spars.

Plaintiff appeared by counsel; defendant appeared personally.

Plaintiff deposed: I am a resident of Yokusawa village. In November last year I sold to defendant three logs of cedar wood. He was to pay me 700 *yen* altogether, and he gave me 400 *yen* on account. I delivered the logs to defendant, but until now he has not paid me the balance of the purchase money. There was no written contract between us; the money ought to have been paid on delivery. One Tanaka, who had charge of the timber, wrote to me that Mr Cook, of No. 115, Yokohama, wanted my timber. In consequence of that letter I and Tanaka visited defendant at his residence in Yokohama. I first demanded 825 *yen* for the timber, but finally I agreed to take 700 *yen*, provided the money was paid right off, and that defendant would himself send boats to where the timber lay and take it away. To this defendant agreed, and asked me to write a receipt for 700 *yen*, which I did. Defendant them brought 400 *yen* and said that the remaining 300 *yen* he had in dollars, and he asked me whether I would accept of them. I told him that dollars were rather low, and that there would be a discount of $6 on the $300; if defendant would pay $306 I was willing to take then for 300 *yen*. Defendant then said that he would bring the 300 *yen* to the place where he was going to take delivery of the timber. To this I consented, and I asked a man named Mukaide Kankitchi, who was living at the place where the timber was, to receive the 300 *yen* for me, and deliver the timber; but shortly afterwards I received a letter from Kankitchi, in which he stated that he had handed over the timber to defendant, and that defendant had said that he would pay the money if Kankitchi would come to his, defendant's, house. I went there myself and asked why the money had not been paid. Defendant then said that one of the logs was unsound; he showed me the same, and I observed that there was a flaw in it, which had become apparent since the carpenters had been at work on it. I did not see the other two logs; they were said to be in the water and could not be examined. I told defendant that as the logs were so large, it had been impossible to guess any inside flaws that might be in existence; defendant had himself minutely examined the logs before he bought them and agreed to pay 700 for *yen* for them; the flaw had only become apparent after defendant had commenced to work up the timber, and I insisted upon being paid the price agreed upon. Defendant, however, refused to pay, and although I have since several times applied for the money, it has been of no use. At the time when I sold the timber, I told defendant that as the pieces of timber were so large, it was impossible for me to guarantee the timber free from flaws; defendant had full opportunity of seeing for himself.

Informed by His Honour that defendant has stated that both plaintiff and Tanaka had guaranteed the soundness of the timber, the plaintiff replied that neither he nor anybody else could guarantee the non-existance of flaws in such large pieces of timber; defendant was asked to look for himself and he did so.

Mukaide Kankichi was next called by plantiff's counsel as witness, and deposed: Plaintiff put me in charge of the timber with instructions to deliver the same to defendant on the payment of 300 *yen*. When defendant came to take delivery, his boats and coolies had not yet arrived; so he left again, and during his absence the boats arrived. He returned, and I asked him for the money, to which he replied that he had not brought it with him, but he asked me to come to his house in Yokohama next morning. He then left, and I handed over the logs to the coolies. Next morning, by the 7 o'clock train, I went to Yokohama and saw defendant, who then stated that the log, first handed over, had been landed, but, that when it was cut by the carpenter, a flaw became apparent, and that under these circumstances he should be unable to pay the price agreed upon; he must therefore see the principal to make a new arrangement. Defendant then paid me three *yen* partly for my own expenses, partly for coolie hire, and after I had come to my home, I wrote to plaintiff. Tanaka was with defendant when the latter took delivery of the timber. The three *yen* paid me by defendant the next morning were paid through Tanaka, who also was at defendant's house that morning. It was Tanaka who said that the timber was unsound. I met Tanaka at defendant's house, and as he had more experience than I, he spoke with defendant.

Defendant was sworn, and said: I am a shipwright, and live at No. 115, Yokohama. I bought the wood for $700, and paid $400 on account. Previous to my buying the logs, I had only seen them in the water, and had not turned them over. Plaintiff came to my house together with Tanaka, who is an old timber-merchant, with whom I have had dealings for years. Both of them guaranteed the logs as sound. Mr Pagdon and a Japanese, Takeda Kisaburo, were present at the time. Two of the logs are completely decayed inside, and I did not think it worth my while to examine the third. I doubt if I shall ever get the value of the 400 *yen*, which I have already paid, out of the logs. I have reason to think that the third log is in the same condition as the two I have examined. I have made no use of the timber. I had bought if for masts for the *Delta* and, being disappointed in the wood, I had to build masts, which cost me money and caused me a great deal of extra trouble. When we buy timber, and a piece turns out bad, we generally turn it back to the timber merchant. In July last I met plaintiff at Yokoska, and then he told me that he would return me my money and take back his timber. I have not seen him since, until this morning in Court. I wanted plaintiff also to pay my expenses, to which, however, he did not agree. Nobody was present at that interview; it took place on the road.

Plaintiff said that was a proposal of defendant's, but he never agreed to return the money or take back the spars.

Defendant called as witness

Takeda Kisaburo, who was warned to speak the truth, and said: I live at Ishikawa; I am a timber merchant; I was present when defendant bought timber from plaintiff. Defendant said that there might be some flaws in the wood, and he would therefore only pay 400 *yen* now, and pay the balance afterwards, but both plaintiff and Tanaka assured him that the wood was positively sound, and it was agreed that the balance of the money should be paid on delivery. No particular guarantee was given; it was only assured that the wood was positively sound. Nor was there any express agreement that the balance of 300 *yen* should not be paid unless the spars proved sound. It was merely agreed that 700 *yen* should be paid for good timber. No provision was made in case the timber should turn out bad.

In reply to His Honour, the defendant declared himself willing to return the wood on recovering the 400 *yen* already paid by him. Plaintiff, however, would not agree to such settlement, as timber has had gone down in the market, and as the wood in question ought to have been paid for long ago in cash.

His Honour then delivered the following

JUDGMENT.

Upon the evidence of Takeda Kisaburo I find that the agreement was that the balance of 300 *yen* was not to be paid until it was seen that the wood was sound. I find that it was not sound, and as the whole of the money was payable for sound timber, and for sound timber only, the plaintiff is not entitled to recover.

Digitized by Google
UNIVERSITY OF CALIFORNIA

I do not think there was an acceptance of the timber. The witness Mukaide Kankichi, when he called the morning after the timber was brought down, to receive payment, was informed that the timber was unsound, and was refused payment. The unsoundness, moreover, could not have been discovered earlier.

The defendant is therefore entitled to rescind the contract, and to return the wood and recover the amount paid, or to set off the depreciation, which upon the evidence of Mr Cook, I assess at 300 *yen*. The plaintiff, however, declines to pay the money and receive back the timber. To give him, however, another opportunity of doing so, the order shall be that upon the payment by the plaintiff of 400 *yen* into the registry of the Court, within ten days from this date, defendant shall thereupon forthwith deliver up the wood to the plaintiff; but if plaintiff shall fail to pay the said sum of 400 *yen*, within ten days from this date, judgment shall be for the defendant.

It is to be observed, that two persons, who could have given evidence as to the agreement, have not been called. One of these ought to have been called by the plaintiff, that is the timber-merchant, through whom the agreement was made, and one, Mr Pagdon ought to have been called by the defendant. But although the case was adjourned from the last day, especially to allow both sides to call all their witnesses, they have chosen to come and have their case decided upon the evidence now before the Court, and it has therefore been decided upon that evidence.

Thursday, December 6th, 1877.

FUKUZAWA KOJIRO *vs.* THOMAS ROSE.

(Adjourned from the 29th ultimo.)

This was a claim for $488.00, with $1,000.00, damages; altogether $1,488.00.

The plaintiff stated in his petition that in July, 1877, he received an order from the Mining Department for 144 steel hammers; he contracted for them with defendant, and deposited $50.00 as bargain money. The hammers were made, paid for, and delivered to the Department, but all with the exception of two proved to be made of iron, only coated with steel. They were consequently rejected, and the plaintiff suffered severe loss.

Defendant's answer was that he never contracted with this plaintiff. He had made a contract with one Kinekuneji Mitsujiro about 144 hammers; he had made them all with the exception of two, which he had imported. The hammers were made in the usual way. the poll of iron and the face of cast steel, or what is known in the trade as cast steel hammers.

The plaintiff appeared by counsel, Nakayama Tameyoshi; defendant appeared personally.

Defendant called as witness

Mr E. M. Neale, who said: I am an American citizen. I live at No. 72, Bluff. (Hammers shown.) This hammer (marked "cast steel") I call a good and serviceable hammer; it is apparently iron, with steel facings. This other hammer (marked "Matheson, cast steel") is a home made hammer, it is steel throughout. The next hammer is apparently iron, with steel facings, it is a good and serviceable hammer. The fourth hammer is of the same nature as the first one. Iron with steel facing is the usual way to make that kind of hammer. I should prefer them made so to having them made entirely of steel. It is only the English made hammer that is entirely of cast steel. The hammer, marked "cast steel," which plaintiff says was shown him as sample, is in my opinion, of iron, with steel facings. (After testing the hammer in Court by aid of one of the other hammers) I am quite confident that the hammer is not of steel, but of iron, with steel facings. (After testing the English hammer in Court in the same manner) I am not satisfied that even this hammer is of steel; it has every appearance of being of iron. When I buy a hammer marked "cast steel," I do nevertheless not expect it to be entirely of cast steel, unless it, in addition, carries the maker's name and the word "warranted." If the maker's name is there, but not the word "warranted," then it is generally presumed in the trade that the hammer is iron, with steel facings.

James Sawyer was next called by defendant, and said: I am a British subject, and live at No. 119. (Hammers in Court shown.) This hammer is a serviceable hammer, only it appears to be a little too soft on the facings; it is of iron, with steel facings. The facings require to be rehardened. The second hammer, marked "Matheson, cast steel," is quite different from the last; it is made of malleable iron. The third hammer, marked "case steel," is a good hammer for all purposes, it is of iron with steel facings. The same is the case with the fourth hammer, it has no mark. I should pronounce that to be the best hammer of the four. For mining purposes I should prefer the hammers made of iron, with steel facings. I am an engineer, and have for some time been engaged in a silver mine. I have myself made a great quantity of this kind of hammers.

Mr James Huggins was the next witness called by defendant. He was sworn, and said:—I am a British subject. I am an engineer, and live at No. 119, Yokohama. The four hammers, here in Court; are all made of iron, with steel facings. They are all good, serviceable hammers. Hammers are very seldom made of solid cast steel. They are very apt to split. For durability I should certainly prefer hammers made of wrought iron, with steel faces. They are also less expensive.

Defendant said that he had summoned Mr Sassano from the Mining Department, but he had not appeared.

Mr Hiki Michiharu, a Japanese, stated that Mr Sassano was in Yokohama until last night, when he was summoned to Tôkiô. Witness is employed at the Mining Department, under the Board of Works. The Mining Department had nothing whatever to do with the plaintiff in the contract about the hammers. He had to do with a man named Furuta Kunichi, who obtained the contract in consequence of his having sent in a tender to the department. The hammers were offered, and rejected because they differed from the sample. It was not witness who rejected the hammers. The hammers were refused because they were not entirely of steel.

To defendant: No fine or indemnity was exacted from the contractor, only the hammers were refused. The hammers were originally ordered to be English made, but as time passed without their being delivered, enquiry was made, and the reply was that the hammers had not yet arrived from Kobe. There was a written agreement about a certain time within which the hammers should be delivered. Witness knows nothing of plaintiff. (Paper shown.) This is Mr Sassano's hand-writting. The original agreement was that the hammers should be imported hammers. Their not being imported was one of the reasons for the hammers being refused. Witness is not able now to recognize the sample with certainty.

Plaintiff said that although the original agreement was that the hammers be should imported, it was afterwards arranged that if they could be made here according to sample, they would be accepted.

Fukasawa Narujo deposed: I am plaintiff's clerk and brother. I accompanied my brother to defendant's house as interpreter. (Paper shown, being an order to defendant to make the hammers.) This is Kunichi's seal; he sealed it at defendant's house, being told that it was a receipt. Plaintiff's name is written by Kunichi in the document, because it was on behalf of plaintiff that Kunichi attended at defendant's house. I went to defendant's house with my brother, when the $50 bargain money were paid, and a receipt for the money was given; the other paper was given later, when we went to press for the hammers; defendant said it was a receipt for two hammers.

To defendant: I myself paid you the 50 *rios*.

Furuta Kunichi deposed: I am a resident of Tôkiô. I was plaintiff's Tôkiô agent, and had on several occasions transactions with the Mining Department. I put in a tender for the hammers in my own name, and it was accepted. I sent word to the plaintiff, who made the contract with defendant. I was not present at the time. A sample was given to defendant. (Points to the one marked "cast steel," as the sample.) Defendant did not make the hammers according to sample, and they were rejected by the Mining Department. (Paper shown.) I was told by defendant to give a receipt for two hammers, which he delivered to me, and I sealed this paper.

To defendant: The hammers were rejected because they differed from the sample; they were considerably softer. They were not rejected because they were not English made. Plaintiff was not present when I took delivery of the hammers. It have not accompanied plaintiff to your house during the hammer transaction. I was not at your house when the 50 *rios* were paid.

Thomas Rose, sworn: I live at No. 113, and am defendant in this case. Plaintiff's younger brother and Furuta Kunichi came to me and asked me if I could make a gross of hammers of a weight from 7½ to 9 lbs. each. I told them, I would make them at 40 cents a pound as soon as possible. They brought a sample, but I do not think I should know it again. I think it was an English hammer. They came afterwards and took away with them two hammers that were finished. They came back and said that the hammers would do, and I proceeded with them. They were finished on the 11th August and delivery was taken and the money paid. A few days after, Furuta brought one hammer back that was a little battered; I found it a little soft and had it re-tempered, and I told him that if there should be more in the same state, I would re-temper them, but could not afford to polish them. Latter on, plaintiff came one evening asking me to give him $1,000. It was after business hours, and I had had nothing to do with him in respect to the hammers. I came to the conclusion that he had tried to make a squeeze. I heard nothing further about it until I heard from the Consul.

To Plaintiff: You never came to my house on that business until after the hammers had been delivered.

Plaintiff, to Court: The two hammers were delivered on the 3rd August, on that day the whole of the hammers ought to have been finished. One of the two hammers was taken to the Mining Department. After the hammers had been delivered, I serveral times went to defendant's house complaining that the Mining Department had rejected the hammers, but defendant said that by heating the hammers and putting them into cold water, they would become harder. After I had complained to the Kencho, a letter was received from the Consul, that defendant was willing to take back the hammers and pay me back the money. However, I refused, as I had already incurred various expenses, and I brought an action for my money and damages.

Defendant, to Court: Nothing was said to me about the hammers being made of cast steel. Only one soft hammer was returned to me, which I re-tempered. It was part of my agreement to polish the hammers, and I did so, but after retempering them I did not think it my duty. I do not think the soft hammer is quite up to sample. I am not willing now to take back the hammers. The only thing that was arranged with regard to the hammers, was size and weight; for the rest the making was left to my discretion. They were not to be up to sample. I should very much like a survey on the hammers.

The Court ordered defendant to lodge the money for a survey with the Court, and appointed Mr Gorge Whitfield as surveyor, to report in Court on Thursday, the 13th instant, at 10 a.m., whether the hammers in question are good, serviceable hammers, and whether they are equal to the hammer now in Court marked "Matheson, cast steel."

The further hearing adjourned until the above date.

GUSTAVE DECHAT *vs.* A. HOUSEAL.

(Adjourned from the 23rd ultimo.)

Plaintiff, who is a merchant in Vladistock, asked the assistance of the Court to compel defendant to comply with a judgment rendered in the police court at Vladivostock, on the 25th August last, by which defendant was ordered to pay to the plaintiff two amounts respectively of $71, and $75.

Mr Montague Kirkwood appeared for plaintiff.

Mr Dickins appeared for defendant, and applied to have the order of the 23rd November last, by which the hearing of this cause was adjourned until to-day, set aside and the cause dismissed, on the ground that the defendant resided out of the jurisdiction.

The Court ordered that, on the defendant paying the plaintiff's costs up to and inclusive of the hearing of this motion, within seven days from date, the petition be dismissed without prejudice; otherwise that the case be heard on Thursday, the 17th January, at 10 a.m., and that the defendant pay the costs of this motion, and have leave to file an answer within eight days.

OFFICIAL ENQUIRY ON BOARD THE BRITISH BARQUE "PAULINE."

An official enquiry was held yesterday, by Russell Robertson, Esq., Consul, on board the British barque *Pauline*, Thomas Thyrer, master, into the circumstances attending the loss of two men, Richard Walsh, A. B., and Edward Afflick, O. S.

The log book was produced, showing an entry, dated 8th August, 1877, which sets forth that the men were lost overboard on that day at 10 a.m., lat. 38.30 South, long. 47 East, heavy weather, vessel pooped by a heavy sea.

Thomas Thyrer, master, stated: During the night of the 7th the weather was very boisterous, but the ship was going very well, and the barometer commenced to rise at 8 a.m. on the 8th. I was not on deck at the time a heavy sea struck the vessel and carried away the two men at the wheel.

William Henry Seville, chief officer: On the morning of the 8th I came on deck after a heavy gale of wind, and relieved the watch at 8 a.m. It had been a hurricane during the night, and the ship was scudding under foretopsail and foresail, lower maintopsail having given out the night previously. At 8 o'clock the barometer was rising and the ship running along very comfortably according to the state of the weather. I saw one man relieve the wheel, and shortly afterwards ordered another man to the wheel to assist him. About 10 a.m. the gale was moderating; I was standing close to the wheel, telling them how to steer, when I saw a heavy sea rise up perpendicularly over the stern. I sang out to them to hold on, and jumped up to the house and caught hold of one of the iron stanchions on the house. When the sea had run off and I looked round, I saw the wheel and both men had gone. By the time the captain had come up; he took hold of the remainder of the wheel, and I took hold of the relieving tackle to windward. I enquired of the watch whether they saw anything of the men; they said "no," and on looking over the stern I could not see a vestige of them. I hove the ship to as quickly as possible.

Simon Anderson, carpenter of the *Pauline*. On the 8th August it was a stormy morning, with a fearfully heavy sea running At about 10 a m., the sea struck the vessel. The two men, Walsh and Afflick, who were at the wheel, were washed overboard. The last I saw of them was when a lot of gear came washing forward, and one of the men arose up in the air.

VERDICT.

I find that the two men, Richard Walsh and Edward Afflick were lost overboard on the morning of the 8th August, and under circumstances that made it impossible to render them assistance, the ship being in danger at the time.

RUSSELL ROBERTSON,
Consul.

CONVALESCENCE.

(Saturday Review.)

During a severe illness, when the patient is not harassed by pain or fever, he occasionally experiences sensations not far removed from pleasure. His very prostration may have a certain charm about it. Rest and repose being at such times the highest objects of his ambition, when he obtains them, he feels a contentment nearly allied to actual enjoyment. Some people are of opinion that even death itself, apart from the diseases which cause it, is probably an agreeable process. On the other hand, the first dawn of recovery has its pleasures. It is like waking on a summer's morning after a long night's sleep. But, however delightful the transition from death to life, it heralds a period of weariness and distress almost exceeding the sufferings of the illness itself. A parallel may be found in the case of minor ailments. For instance, when the blood has been accidentally prevented from circulating freely in one of our limbs, no inconvenience is experienced; but when the vital fluid reflows, great discomfort and pricking sensations succeed. Again, the act of fainting is said to be far from unpleasant, while the resuscitation is disagreeable or even distressing. So in severe illness there may be periods of pseudo-pleasure, while the restoration to health may be irksome in the extreme. Returning strength seems almost too rough and rude a friend for the poor weak body; and, if its first tenders of assistance are welcome, we are tempted to wish that it would not be quite so energetic in its later advances. Our bodies during convalescence become bones of contention between strength and weakness, each of which struggles hard for the mastery. It is disheartening, after a rapid advance, to find that we had overrated our powers, and to be thrown back for a week or two. As we begin to walk about a little, we become more keenly sensible of our great weakness than we were when still lying in bed; and when we throw ourselves down for rest upon an easy-chair or a couch, we draw unfavourable comparisons between their comfort and that of our bed. It would be like striking our flag to return to the latter place of repose; and we therefore remain wearily on the sofa or armchair until the happy moment arrives when we can respectably ensconce ourselves between the comfortable sheets. During convalescence reading must of necessity form our chief amusement; but our brains and eyes soon weary of it. And then, in our books and newspapers, we read of those who are, or have been, up and doing; and this makes our own enforced idleness the more painfully apparent. Everybody seems to be at work except ourselves. Perhaps it strikes us that our confinement to the house is a capital opportunity for working up some foreign language, or cultivating some art or science. We set to work valiantly, but grammar proves quite beyond our strength, the pencil will not bring the lines into drawing, and the scientific problem makes our heads ache. The idea occurs to us that at any rate we can write a light satire, and that such an occupation will cheer and amuse us. This attempt, however, is an utter failure; all our efforts to summon sparkling wit and effervescence result in miserable unsuccess, and in place of a brilliant squib we produce a few vapid pages, while a deep gloom settles upon us instead of a spirit of fun and banter. We pipe unto our wit, but it will not dance. The black demon of disgust with the world and with ourselves hovers round us. In this stage, to what depths may we not sink? Perhaps even to attempts at poetry or musical composition. There are no limits to human folly. The patient who is sane enough in mind to be aware that he has no special genius will probably long for society. Yet, when his friends come to visit him, he soon becomes intensely wearied. The callers' very anxiety to amuse without fatiguing him makes them stilted and awkward, while he has not sufficient vital energy to keep the ball of conversation rolling about conventional nothings. The convalescent host is an object richly deserving of pity. Trifles which, at ordinary times, would scarcely occur to his mind, now press upon him almost more heavily than the question of his eternal salvation. The society of his guests causes him weariness and vexation of spirit rather than pleasure and gratification. When, utterly tired out, he has asked permission to go to bed, as he leaves the smoking-room he perceives a peculiar expression on his friends' faces, and a significant interchange of glances, which plainly means "Poor fellow, he is not long for this world." The minor arrangements for sending to meet or despatching his visitors, the disposition of a shooting party, or the management of an entertainment of any sort or description, are enough bring his grey hairs with sorrow to the grave.

The appetite of the convalescent is fitful and capricious; yet his friends insist upon stuffing him at all sorts of odd hours, as if he were destined to fill a tureen *de foie gras*. Between breakfast and luncheon he must swallow some raw meat juice and a glass of wine; at three p m he must take some strong jelly; between dinner and bedtime he has to face beef-tea, and during the night watches he is dosed with Liebig's Extractum Carnis. An a attack of biliousness soon follows, which has to be relieved by cooling but unpleasant medicines. The doctor tells him that he never intended him to be overfed in such a manner, and reads him a long lecture on the incapability of the stomach to respond to too frequent calls upon its energies. In place of being overgorged, he is now overtonicked, until a buzzing in the head and sudden deafness demand rest for the system from medical pick-me-ups. There is yet one more torture in store for him. He is sent abroad. According to the time of year, a German watering-place or an Anglicized town in the South of France is selected as the scene of his banishment. The necessary arrangements before leaving home harass him beyond measure. Even were he in good health, they would prove a considerable burden. Wearied out by these preliminary worries, he starts upon a long and tiring journey, reaching his destination more dead than alive. To be treated like a child by his courier humiliates and annoys him; yet he is perfectly helpless in his hands. Likely enough, wet weather or the mistral hails his arrival. Sad, indeed, is then his lot. Confined to the house, as he lies all day in his one sitting-room, he wishes himself back in his comfortable English home, with its choice of rooms and domestic interests. Such meditations upon his personal comforts and discomforts, and the increase or decrease of his health, are apt to engender in his disposition that spirit of selfishness and egotism which too frequently becomes a parasite of the invalid.

But unfortunately the convalescent himself is not the only sufferer. His relatives and attendants who may be taking care of him have also a bad time of it. When he was very ill, there was a certain excitement in nursing him; and watching every symptom that presented itself caused an intense and perpetual interest. The very dependence of the patient upon his nurses afforded the latter some gratification. It won the heart of the female attendant to see the great stalwart man owing every comfort and necessary to her tender watchfulness and delicate hands. The fact of having a strong man under despotic discipline, and reduced to the feebleness of a baby a month old, has charms for certain feminine minds. It is sweet to the weaker sex to have the power, by raising a finger, to silence in an instant the voice of one who in health can move the hearts of thousands by his oratory; and it is delightful to the fair governante to have full authority to scold, or even punish by a curtailment of reading or conversation, the wayward patient whose utterances as a judge, examiner, or critic, are usually received with awe and fear. But, besides these pleasures of despotism during serious illness, there is an excitement in the constant and marked changes, and the rapid succession of hopes and fears. In convalescence, however, there is none of this stimulative interest; the process of restoration to health

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

is gradual and gently progressive, and the only excitement is an occasional relapse, which is caused, as a rule, by some imprudence on the part of the invalid. The gentle patient who in the extremity of his illness, was so passive and so grateful for the least service, is converted into a testy and irritable hypochondriac, who resents the least interference and yet is discontented unless constantly attended to. His constant employment is to do nothing, and compel as many people as possible to assist him in this nugatory occupation. His occasional relapses are very disheartening to his poor attendants, and yet he generally seems to attribute them in some degree to their neglect. They dare not explain and argue out the whole state of the case to him, lest he should become wearied and feverish, and the ill-deserved odium has to be patiently endured. He becomes wilfully wayward His nurse flatters herself that he is safe in his own room, when suddenly he appears on the terrace, although a keen easterly wind is blowing, and he adds insult to injury by appearing immensely pleased with himself, and indulging in a little chaff at his duenna's expense. During the relapse which follows this piece of imprudence, he suffers from a fit of overwhelming depression, when his attendant has to devise means of amusing and enlivening him, instead of indulging in richly merited "I told you so's." He will be fidgety and restless, and take the most capricious and unaccountable likes and dislikes to people, places, and things; evincing a sudden antipathy towards a watering-place, just as every arrangement has been satisfactorily made there for his comfort, and taking an invincible aversion to a wine or rare article of food, a stock of which has just been laid in at his especial request. If he is fanciful about his food, he is absolutely obstinate about his medicines, and when he has left the neighbourhood of his doctor, he refuses to take the tonic which he used to swallow so obediently. If he has been suffering from gout, he will insist upon drinking port and champage, and tasting all sorts of "curious" and unwholesome wines. If he has been ailing from poverty of blood, he will take a sudden whim about total abstinence, and drink nothing but water. After an attack of gastric fever, richly made dishes will form his favourite food; while after an illness which necessitates the most nourishing of diets, he will be seized with a mania for fasting or vegetarianism.

Altogether convalescence is a trying period both for nurses and patients, especially after severe illnesses. It is an uninteresting, unsympathetic, and uncomfortable probation, and severely tests the temper, patience, and endurance both of the victims of disease and the victims of invalids.

REUTER'S TELEGRAMS.

LONDON, December 6th, 1877.

THE WAR.

Despatches report that the Russian Forces have occupied the entrances to the Balkan defiles at Statitza.

The Turkish troops under Mehemed Pasha are advancing and the Russians retreating.

Suleiman Pasha has captured Elena, together with some war material. The loss of the Russians is estimated at three thousand men.

ITALY.

The Pope is not expected to recover.

LONDON, December 5th, 1877.

THE WAR.

Despatches from Mehemed Pasha, dated the 3rd December, report that the Russian forces attacked the Turkish left wing at Komarte (?) south of Stratitza (?), but were defeated with great loss.

FRANCE.

The Chamber of Deputies and Budget Committee have refused to accept the present Budget Committee's report.

AMERICA.

A message of the President to Congress recommends the levying of a tax of ten cents per pound on Tea.

LONDON, December 3rd, 1877.

THE WAR.

Despatches report Ahmed Mukhtar Pasha states that he will be able to defend Erzeroum.

The Roumanian troops have occupied Lompalanka near Widdin and the Turkish forces have retreated to Widdin.

According to a Russian official despatch the Turks have abandoned and the Russian troops occupied Chazubani near Batoum.

ITALY.

The condition of health of Pope Pius Ninth has changed for the worse.

LONDON, 2nd December, 1877.

INTELLIGENCE FROM THE SEAT OF WAR.

Recuf Pasha is organising an army of fifty thousand Turkish troops for the defence of Adrianople.

FRANCE.

Gambetta has demanded the President of the French Republic to renounce the Right and dissolve the Chamber of Deputies, which demand the President has rejected.

ENGLAND.

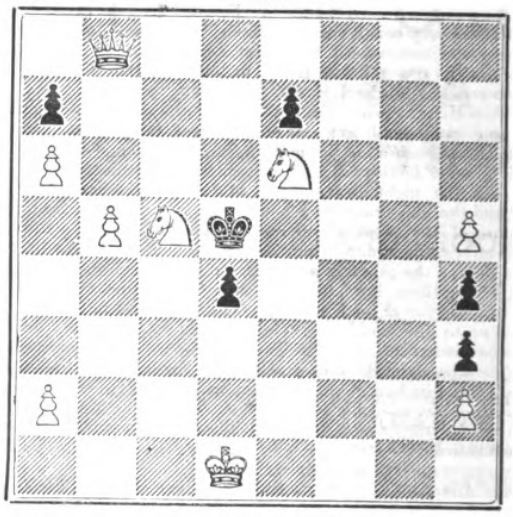
The English Mediterranean Squadron will winter at Besika.

LONDON, 1st December, 1877.

INTELLIGENCE FROM THE SEAT OF WAR.

The Russians are maintaining their positions around Erzeroum, but all operations are suspended owing to heavy snowy weather.

According to a Russian Official Despatch the Turkish troops advancing on Metchka have been defeated and compelled to fall back.



The *Daily Telegraph* states that the Turkish forces have evacuated Orchanie.

Kerosene Oil.—The *Ceylon* has arrived with only 17,000 cases, and the market remains without change.

EXPORTS.

Silk.—The market has continued active during the week, the better descriptions of all classes of Silk being chiefly in demand. Dealers have lately raised their pretensions, and have succeeded in obtaining an advance of $15 to $20 per picul on Hank sorts in general. At the close buyers are giving their attention more to the lower classes of Mybash, for which, in consequence, higher prices are now asked. Medium to good Oshius have been more enquired for, likewise 2nd class Filatures at full rates.

Settlements amount to 1,000 bales of Hanks, and 150 bales of Oshius and other sorts. The total export to date is 13,386 bales.

		In London at 4s. 0d. per lb.	*In Lyons at f. 5.05 per kilo.*

Tea.—Our market affords but little matter of interest to comment upon since our last issue. The demand ran principally on low grades, but recently *Finest* to *Choice* parcels have attracted the attention of buyers, but holders of these, however, have raised their figures and operations have in consequence been checked. Settlements amount to 1,230 piculs, making a total in Yokohama for the season of about 93,000 piculs.

Common	$10.00 to $13.00	Fine	$21.00 to $24.00
Good Common	$12.00 to $14.00	Finest	$27.00 to $32.00
Medium	$14.00 to $16.00	Choice	$34.00 nominal
Good Medium	$17.00 to $19.00	Choicest	—

EXCHANGE AND BULLION.

Exchange.—There has been a fairly large business done during the past week at slightly advanced rates on last quotations, which, however, look easier at the close.

Rates close as follows:—

INSURE YOUR HEALTH

BY TAKING

HOCKIN'S

IMPROVED SEIDLITZ POWDER.

IT differs from the Seidlitz Powders usually sold in having all the ingredients in one bottle, is quite tasteless, and may be taken by persons of all ages as a *Cooling Beverage, Mild Aperient* or *Brisk Purgative* according to dose. Its extensive use during nearly HALF A CENTURY proves its valuable qualities as a Purgative Saline, and the fact that the powder retains its qualities for any number of years renders it a most reliable and efficient Domestic Medicine. It will be found invaluable to Families, Travellers, or Emigrants, as a preventive or remedy in all cases of **Sickness, Headache, Bilious Attacks, Fevers,** and the other ordinary **ailments** of life.

W. & C. SCOTT & SON.

FIRST PRIZE MEDAL and DIPLOMA OF HONOUR awarded, CENTENNIAL EXHIBITION, Philadelphia, 1876. For excellence of Materials and Workmanship in their PREMIER QUALITY and medium grades. Their New PATENT TRIPLEX action and COMPENSATING LUMP.

CHOKE BORES ON GAME.

WE have received numerous letters testifying to the excellence of our Guns. The following are a few extracts.

The W. & C. SCOTT & SON No. 10 choke bore "is all its name implies." I have killed stone dead grouse flying at 92 yards, and at 50 and 60 yards it will kill every time. At duck shooting it is perfection.
Brainherd, Minnesota. T. P. C.

I have just returned from North Carolina (Currituck Sound). I cannot say too much in praise of my choke bore. I have killed ducks at 60 yards, dropping dead out of the bunches at that distance. I consider I have an extraordinary gun, and deem it my duty to speak in the highest praise of guns of your manufacture. Wishing you all the success you deserve.
Red Bank, N.J., 1877. G. A. W.

From Captain BOGARDUS, Champion Shot of the World.—The Breech-loader you furnished me with is the best *proportioned* and most *effective* gun I ever owned or used. Its shooting is perfect, and I have won every contest since receiving it including my late English matches. I fully recommend the Scott as the gun.

I have carried guns of your make from Nova Scotia to Florida, and from the Adirondacks to the Pacific, and find them all I could wish for.
Cazenova, N.Y. L. W. L.

The guns for myself and friends have safely arrived. I have now great pleasure in acquainting you that I am extremely glad in possessing them. I have tried them and they give me great satisfaction. My friends are also very pleased too.
Yedo, Japan, March, 1876. V. E. B.

I have just received the Two fine guns ordered for me by Mr. B. F. Stevens, London, and desire to express my entire satisfaction of them. Such fine weapons which while they do credit to a reputation already so well known as to need no establishing, deserve from me some expression of my appreciation of the manner you carried out my wishes. A more substantial evidence of my estimation of the gun is to be seen in the fact that I have this day directed Mr. Stevens to order another for me.
G. R. W.
Paymaster U. S. Navy.
United States Flag Ship *Omaha*.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

DEATHS.

At No. 73, Yokohama, on December 9th, in the 40th year of his age, TEMPLE WILLCOX, son of the late Captain Robertson Willcox, R.N.

At the residence of his son, in Kobe, on the 8th of December, Revd. PETER J. GULICK, a native of New Jersey, United States of America, for forty-seven years a missionary at the Sandwich Islands, and three years resident in Japan,—aged 80 years and 9 months.

Notes of the Week.

From the beginning of the ensuing year Mr. F. V. Dickins will assume the political and literary editorship of this Journal.

With the New Year, or as soon after as practicable, certain changes will be introduced into this journal which, it is hoped, will meet with the approbation of our subscribers. Less space than heretofore will be devoted to the reporting of cases in the law-courts, which are for the most part of trifling public interest, and are besides fully reported in our evening contemporaries, as well as in the morning sheet issued in connection with this paper. The room thus gained will, as far as possible, be occupied by translations from the Japanese and original matter of literary or general interest, with such extracts from English, American and Continental papers and periodicals as may be deemed likely to amuse our readers. An attempt will also be made—the success of which must depend mainly upon the kindly coöperation of the public—in some sort to fulfil the office of the well known "Notes and Queries." Much that many of us would often be glad to know many of us may be in a position to tell, and we shall be happy give insertion to any queries that the more curious among our readers may care to address to us, in the hope that those whom their studies or means of information may enable, will be prompted by their good nature to satisfy a legitimate inquisitiveness.

We are informed that owing to the terrible condition of privation to which the inhabitants of certain portions of the Empire of China are reduced by the prevailing famine, eight provinces have had the "Hwang-ti" or Imperial taxation remitted for the year ending February 1878, while three other provinces will be able to pay no taxes, or but partial amounts. As owing to drought and the terrible thinning out of the miserable population a great deal of ground has necessarily been left unsown during the autumn, the prospects for next year, even should the season be propitious, are bad. The price of rice at Hongkong, Amoy, Swatow, Shanghai and Teintsin is no criterion of the condition of affairs existing in the interior. By successive failures and deficient crops of cotton, poppy and ceraels of all kinds, the resources of the Empire have become exhausted. It may not, indeed, be too much to affirm that never since the convulsions which terminated in the overthrow of the Ming dynasty has China been reduced to such a state of utter poverty. If rice be one dollar or a hundred dollars per picul, it is of no matter to the millions who have not a single cash to buy a grain of it. We hearon the best authority that many families of landowners in Shantung, Chihli, Shênsi and the adjoining districts who were once opulent, are now in as abject pauperism as the common crowd, while heads of families, able a year or two ago to live to some extent in luxury, hiring tutors for their children and sending their sons as cadets to colleges for degrees, are now selling wives and daughters and children, thankful even if they can give them away as slaves and thus save them from certain starvation. In Shantung, the fruit trees, one of the great resources of the province, have been destroyed by being stripped of their bark to serve as food to the famine stricken population, and a district once fertile and wealthy has thus been ruined. The province of Honan, to which the Japanese Government were meditating the making of a loan of rice and copper cash, is nearly as badly off as Shênsi. As the people of this province are of a turbulent, lawless nature, brigandage has assumed alarming proportions, and serious disturbances are looked for between this and March next. The Japanese Government is therefore well out of the business, as far as regards its chances of being repaid.

The Yokohama *Saibansho* seems possessed by an incomprehensible desire to incur the ridicule of the public. The whole foreign community is laughing at the amusing scene that took place last Tuesday between the judge of the Court and two British subjects who were in that dread presence as plaintiff and witness respectively. These twain sons of that terrible Albion whose gluttonous propensities cause Japanese editors to tremble with rage and fear, had the impertinence to feel cold, and the insolence to keep on their great coats as a protection against the chill of a hardly warmed apartment, over-ventilated for the season through insufficiently glazed windows. The wrath of the tribunal was aroused and the delinquents where ordered to doff their coats, and shiver through the case with such equanimity as they might command. Some months since the same tribunal was guilty of a similar

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

piece of absurdity. A Chinaman who appeared as witness in a pending case, was about to be examined, when the Court discovered that he wore spectacles. We need hardly say that no time was lost in depriving him of the use of these—to him—absolutely necessary appendages. Had he worn a wig, he would, we suppose, have been obliged to expose his *calvities* to the amused gaze of the Court. It may be urged that foreigners before Japanese tribunals are only required and are bound to conform themselves to the rules of which the observance is enforced upon Japanese subjects. But the difference of dress and habits ought surely to be taken into proper consideration, and the dignity of a Japanese tribunal were, we submit, better maintained by requiring such tokens of respect from foreigners who come before it as the latter are accustomed to show in their own Courts, and as their usages and modes of dress permit of, than by compelling them to suffer physical inconvenience and endure unnecessary discomfort. We are sure, too, that a little more consideration for foreign litigants would increase their respect for Japanese judges, who commonly address them as if they were coolies, using a phraseology that no European judge would employ towards the meanest suitor in his Court. Simple courtesy on the judgment seat cannot fail to be met by a corresponding respect from below the bar, and civility is so specially characteristic of the people of this country, that official rudeness becomes an utterly indefensible breach of national good manners.

The question arises in the enquiring mind as to what will happen if, in the course of events, women should be permitted to practise as lawyers, and it should fall to their lot to appear in a Japanese Court. When Nerissa comes in "dressed like a lawyer's clerk," and Portia "dressed like a doctor of laws," will they take off their bonnets and throw aside their polonaises at the stern bidding of the Judge? In Leipsic it would appear, by the way, that women's rights are yet hardly recognised, for in the late papers we read that the authorities of that city have imposed a fine of not less than five nor more than ten marks upon any woman who shall wear trailing dresses in the streets. The police have orders to arrest them, and their names are to be published each week in the local papers. And a very good law too. But fancy any English or American authorities attempting such a course.

A meeting of pony owners was held this morning which was well attended, and we are extremely glad to say that common sense ruled the meeting entirely, as it was unanimously agreed that there was but one effective way of healing the division which has for too long a time ruined good sport in this place, namely by forming a new Club to which every one will be eligible for membership on payment of the subscription which shall be agreed upon. Only preliminary steps have as yet been taken, but these are in the right direction. Care will be observed that the arrangements made shall do no injury to members of the Club and Association, but as executive bodies these will now, we are glad to say, cease to exist, and racing in Yokohama be guided by one generally representative Jockey Club. Bickering will, we hope, now cease, and the next spring show us better sport than would have been possible had there once more been rival meetings.

A letter appears in the London *Mail* of October 17th, stating that the prospect of the Claret Vintage in France is extremely favourable, and that the production of wine will be considerably over that of last season. In the year 1875 the quantity and quality of the vintage was altogether exceptional, being greater than that of any previous year, the Gironde alone producing 116,000,000 gallons and the whole of France no less than the enormous quantity of 1,848,000,000 gallons. In 1876 the result was far less satisfactory, the production falling to 924,000,000 gallons. This year, however, in spite of the fears expressed at the early part of the summer, there will be a good vintage, and considerable increase in quantity over that of 1876. In the letter alluded to occur the following remarks:—"For France it is almost impossible to over-estimate the importance of a good vintage, and for Bordeaux especially, when it is calculated that the quantity of wine exported thence annually is not less than 44,000,000 gallons, a slight difference from the time—not so very long past—when the vine-growers of the Medoc went themselves to London to sell their vintage. The story goes that one of them, having on a certain occasion fixed the sum at which he would sell all his wine, taken on the spot, and his customer wishing to drive a bargain with him, he emptied one tun into the Thames, demanding the same sum for the remainder. The purchaser still refusing he emptied yet another tun, still maintaining his price, and the only course open at last to the would-be buyer was, in the language of M. Gambetta, to "submit or to be dismissed."

In the *Economist* of the 13th October appears a long communication from the pen of Mr. A. A. Shand, late Secretary to the Comptroller of Currency in the Finance Department of Japan, on the Japanese National Banking Act of August, 1876, and on the present state of the Japanese currency. To Mr. Shand the columns of this paper have been indebted for several valuable contributions on the question of currency in Japan, and certainly there is no other foreigner who has had such opportunities afforded him of seeing into the workings of Japanese Finance, or who can write with such authority on the subject. In the article alluded to Mr. Shand again urges, as he unceasingly did during his residence in Japan, the introduction of Japanese coins as legal tender at the treaty ports, as the first step necessary to place the currency of Japan upon a sound footing, and he concludes his remarks with these words:

"Under such a rational and proper system, the Government would have no plea upon which to justify further issues of unconvertible paper. It is true that a large number of foreigners are averse to such a change; some because they believe (quite erroneously) that the treaties provide for the use of the Mexican dollar; others because they fear the Japanese Government may not be careful to maintain the purity of their coins. In as far as the treaties touch upon the question they contemplate the use of *Japanese coins* in payment by foreigners to Japanese. The objection that the Japanese Government may possibly at some future date, fail to keep its coins up to the mark, although not perhaps unreasonable, cannot be allowed to have such weight as to require the Japanese Government to adhere to a system which entails severe annual loss upon the country, and which leads them to commit serious financial errors like this National Banking Act. It cannot for a moment be supposed that this Act will ameliorate the condition of the country. On the contrary, it must inevitably add new evils to those which already exist."

The inhabitants of Tosa appear to have a strong will of their own, and to be very impatient of any outside interference. Recently, according to the *Akébono*, the citizens of Kochi made a large *Dashi* or triumphal car, as high as a two story house, and stating that such an expedient was admirable to drive away cholera, proceeded to drag it in procession through the streets accompanied by a great noise of drums and gongs. The *Kencho* authorities, seeing that it obstructed the thoroughfares, ordered them to desist, but the crowd sent back word that if the *Kencho* would put a stop to the trumpets (alluding to the garrison which has recently been stationed in the city), they would cease their drums and gongs. The writer also complains that the *samurai* in that part of the country behave as arrogantly as ever. When they see a policeman coming, they set him at defiance by committing very unseemly actions, and if they meet anyone who has the appearance of a Government official, they intentionally knock up against him. Both day and night, bodies of them visit the residence of the Governor or of the other officials, and hold sharp arguments with them, in every way showing their scorn and discontent.

With reference to the feeling of discontent that has recently been reported as prevailing among the *samurai* of Chôshiu who served as troops in the suppression of the late rebellion, and who were disbanded at the close of the war, the same

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

paper gives the following explanation. During the war most of the coolies who were required for the services of the army in Kiushiu were taken from among the lower classes. Every twenty to fifty of these coolies had a head man, and these latter are said to have made large sums of money, which enables them to live in a style beyond the *samurai* who did the fighting and have now returned to their homes. This has been the cause of much heartburning and discontent. It is not possible that the *samurai* of Chôshiu shall be treated any differently to the *samurai* of other provinces who took part in the war, but it is said to be a troublesome matter to know what to do to keep them quiet.

From the American paper we learn that the Rev. Samuel Isaac Joseph Scherechewsky D. D., was recently consecrated as Missionary Bishop of the Protestant Episcopal Church of Shanghai, with jurisdiction over the entire Chinese Empire. The ceremony, at which seventeen bishops assisted took place in Grace Church, New York, the venerable Bishop of Kentucky officiating as consecrator. The newly elected Bishop is of Polish parentage and was educated in the School of the Prophets in Poland. He was the representative of the American Bible Society in their joint work with the British Society of translating the Bible from Hebrew into the Chinese Mandarin dialect.

An application of solar heat to the art of cookery has been successfully carried out by a Mr. Adams at Bombay. Although the apparatus used is doubtless constructed on a new plan, the idea is by no means a novel one, a series of successful experiments having being made within the last few years, in America if not in England, with a view of substituting the heat of the sun for purposes of cookery and other useful operations. According to the *Bombay Gazette*, a leg of mutton and vegetables were perfectly cooked by Mr. Adam's apparatus, which is of an extremely simple nature, not the least important point being that the heat is retained for several hours. At present, the course of cooking, although perfect in its result, would appear to be a trifle tedious, and as yet we cannot, judging from reports, recommend its adoption by travellers, or by any one with whom time and punctuality have to be observed. On the occasion of its trial in Bombay, seven pounds of mutton and vegetables were placed in the vessel, which was exposed to the heat of an Indian sun at 11 a.m. It had to be placed so as to receive the solar rays vertically, thus necessitating constant attendance, as its inclination had to be changed every half hour. "At 4 p.m." we are told, "the apparatus was conveyed into a room where it was covered with a railway rug, and at 8 p.m. the rug and the glass cover were removed and the meat and vegetables were found thoroughly cooked, and (a point of great importance) quite as hot as if the vessel had just been removed from the fire; the vessel, in fact, could scarcely be handled by the naked hand." It is satisfactory to know that the stew was perfect, but we fail to see where the great advantage lies over the usual mode of preparation, except in the saving of fuel. Mr. Adams says that he has another apparatus of much greater simplicity, by which chops and steaks can be cooked as expeditiously as on a gridiron over the fire. As yet, however, it will scarcely be advisable for people to sell their cooking stoves and pull down their kitchen ranges, for if all dishes take the same time to perfect as the experimental mutton, preparations for a dinner party, allowing for cloudy days, would have to be commenced a week ahead. Mr. Adams, however, claims for his invention greater powers than the simple cooking of Irish stew. He can, he says, "generate steam for machinery, smelt mineral ores, bake bricks, evaporate water in salt pans, cremate deceased Hindus and others, exterminate a whole army of soldiers," and perform many other miraculous and useful acts. But how about these feats when the sun strikes work and sulkily retires behind the clouds?

But it is the age of marvellous inventions, and so that they are marvellous they satisfy a sensation loving public, who care not much for their utility, as long as they can be tickled by astonishment. The telephone has almost ceased to be a thing to wonder at, when there comes to us, through the pages of the *Scientific American*, an announcement so startling—we should almost say incredible if it were permitted one to be incredulous of any mechanical possibility at the present day—that all recent sensational inventions are completely eclipsed. It is nothing less than that means have been discovered whereby it is rendered possible that the voices of the dead shall become living voices to the living, or, if the term may be permitted, human speech may be crystallized. Had the statement appeared in any less trustworthy paper, it would have been too much for the most hopeful believer in the possibilities of human cunning to have accepted, but here we have a serious description of what appears likely to be as possible of fulfilment as the electric telegraph, or the telephone, or any other of the nineteenth century wonders. The use claimed for this phonograph is that it is capable of registering the words spoken into it, and of reproducing them at any future time, thus rendering speech immortal. In its remarks upon the invention, the *Scientific American* has the following:—

"The possibilities of the future are not much more wonderful than those of the present. The orator in Boston speaks, the indented strip of paper is the tangible result; but this travels under a second machine which may connect with the telephone. Not only is the speaker heard now in San Francisco, for example, but by passing the strip again under the reproducer he may be heard to-morrow, or next year, or next century. His speech in the first instance is recorded and transmitted simultaneously, and indefinite repetition is possible.

"The new invention is purely mechanical—no electricity is involved. It is a simple affair of vibrating plates, thrown into vibration by the human voice. It is crude yet, but the principle has been found, and modifications and improvements are only a matter of time. So also are its possibilities other than those already noted. Will letter writing be a proceeding of the past? Why not, if by simply talking into a mouthpiece our speech is recorded on paper, and our correspondent can by the same paper hear us speak? Are we to have a new kind of books? There is no reason why the orations of our modern Ciceros should not be recorded and detachably bound so that we can run the indented slips through the machine, and in the quiet of our own apartments listen again, and as often as we will, to the eloquent words. Nor are we restricted to spoken words. Music may be crystallized as well. Imagine an opera or an oratorio, sung by the greatest living vocalists, thus recorded, and capable of being repeated as we desire."

The *Economist*, in mentioning the arrival of £100,000 in Japanese gold coin, which was as usual put into the melting pot, states that the Japanese alloy their gold with some substance the exact composition of which is not known, which renders the metal capable of receiving a very sharp impression, but at the same time makes it too brittle for the ordinary market. The writer here is under a misapprehension in supposing that any other than the usual alloy is mixed with the coin issued by the Japanese Mint. From a private source we learn that this defect is due to the presence of that rare metal iridium, which is found combined with Japanese gold in its natural state, and is extremely difficult to extract, being separable only by a very tedious and complex series of operations. It much resembles platinum, the heaviest of all known metals. It is, we believe, never found unless in combination with gold or platinum. Almost its only use, owing to its scarceness, is for forming points to gold pens.

A Temperance Society is evidently badly wanted in Takasaki in Joshiu. Some of the inhabitants of that place, evidently forgetting that "every inordinate cup is unblessed, and the ingredient is a devil," met together lately, says the *Hôchi*, in order to see who could succeed in drinking the most *saké*. Those who could drink but one *sho* (about two imperial quarts) were considered to have "very poor and unhappy brains" and were not permitted to enter the ranks of the competitors. Several drank from two to three *sho*, but the one who bore away the prize, namely a roll of silk, was he who succeeded in putting down five *sho* in the short space of thirty minutes.

The *New York World* announces the death at the ripe age of eighty-six of Mr. James Brown, the founder of the well known banking house of Brown Brothers and Co., and brother of Sir William Brown, the head of the London banking house of Brown, Shipley and Co. Mr. Brown went to America from his native place Ireland in the year 1800, with his three brothers and their father, who commenced a business as a general merchant in New York. The firm was very sucessful, and in 1808 William returned to Liverpool, where, in 1810, he established the well-known firm of Brown, Shipley & Co., which is still the English representative of Brown Bros. & Co. In 1818 John A. Brown removed to Philadelphia and established the firm of John A. Brown & Co. Mr. James Brown, the subject of this notice, removed to New York in 1825, and established the firm of Brown Bros & Co., and since that time he has been prominent in every event of importance to the financial or commercial community. It is said that during the crisis of 1837 the firm held American bills for a very large amount, including nearly £800,000 of protested paper, and had at the same time to meet engagements in England, amounting to nearly $10,000,000. Their own resources were to a considerable extent locked up in American securities not immediately available, and during the panic prevailing on both sides of the Atlantic it was impossible to draw bills or to remit specie to England. But as the suspension of the firm even for a limited time would have greatly aggravated the commercial embarrassment of the period, the English house succeeded in effecting a loan from the Bank of England for the whole amount of its engagements in that country, depositing securities for the advance to the amount of $25,000,000. The whole sum borrowed from the bank was repaid in six months, and the firm enjoyed thenceforth an unsurpassed reputation for business integrity both in Europe and America.

Among other items of information in the American papers, we notice that the "Japanese Prince Kita Shirakawa no Miya will not marry that German countess with whom he is in love. The Japanese court is dead against such a precedent, although he is not in the line of succession, and he will not be accepted into the bosom of the family until he has broken with his *inamorata*."

It is affirmed that the coast at the Port Said entrance to the Seuz Canal is advancing outward at an alarming rate, estimated as much as fifty yards per annum. Some alarm is naturally felt at this statement, which, if correct will necessitate annual dredging operations on a costly scale. The general level of the Mediterranean is said to have fallen about four inches since the opening of the Canal.

All things will come in time to those that wait, and at last after many years of patient waiting, some slight protection is afforded to riders and drivers on the Bund by the recently erected posts and chains. The same useful, though scarcely ornamental, railing is being put up at the hitherto unprotected sides of the Creek. Many of those who lived here in the halcyon days of prosperity have not remained to witness the last few crowning glories of our time. It is possibly reserved for those who come after us to see gas in the streets of the foreign settlement.

A letter from Kagoshima, in the *Chôya*, states that though a very low spirited feeling has prevailed among the people there since the close of the insurrection, the price of all necessaries has been very high indeed. The Government has given the sum of forty *yen* to each of the families who were burnt out during the late war. It is also stated that to each of the civil officials of the *Daijiokuwan* and all other Government departments, who had to give extra attendance in their offices owing to their press of work caused by the Southern disturbance, will be given a reward of from five to ten *yen*.

The flags of the men-of-war in port were flown at half mast this afternoon, on account of the death of the surgeon of the Japanese man-of-war *Raiden Kan*, now lying at Shinagawa.

From the "Japan Mail Daily Advertiser."

***Monday*, 10*th*.**

The *Choya Shimbun* says that the decoration of the 4th Class of the Order of the Rising Sun has been conferred on M. de Bousquet, formerly attached to the *Genro-In*.

The Chinese Ambassador arrived at Kobe on the 7th instant, and His Excellency and suite have paid a visit to Kiôto. It is expected that the Embassy will arrive in Tôkiô on the 12th instant.

From the *Yomiuri Shimbun*.

Foreigners in the employ of the Government were hitherto allowed to live in any part of Tôkiô, but hereafter they will not be permitted to live in the neighbourhood of the Tsukiji settlement.

From the *Nichi Nichi Shimbun*.

A special office has been established at the *Daijôkuan* to investigate into the expenses incurred by the Government during the recent war in Kiushiu. Mr. Okuma, the Minister of Finance, has been appointed the Chief of this office.

From the *Akébono Shimbun*.

All matters concerning shipwrecked Loochooans will hereafter be taken charge of by the *Naimusho*.

Generals Miura and Miyoshi will shortly return to their respective garrisons.

From the *Yomiuri Shimbun*.

Mr. Tomioka, the Governor of Kumamoto *Ken*, arrived in Tôkiô on the 7th instant, on business relating to the land tax reform.

***Tuesday*, 11*th*.**

The *Hôchi Shimbun* relates the following story:—In the district of Shinoyama Kawa, Kagoshima *Ken*, lived an old *samurai* named Takagi, who had two children, a son named Unkichi aged thirty-one, and a daughter ten years younger named Teru. At the time when the Satsuma insurgents were about to enter Higo, Unkichi came to his father and told him that he had joined the rebels, and was about to start with them on the campaign. His father, however, remonstrated with him in such strong terms, that he saw the folly of his course, and going to the *Kuchô* stated that he should withdraw from the cause. The *Kuchô* approved his resolution and made it known to the rebel leader Hemmi. The latter, however, on hearing of it, was very angry, and believing that the refusal of Unkichi to join his forces arose from the fact that he had a cousin in the service of the Government in Tôkiô, who had dissuaded him from his previous intention, gave orders for Unkichi to be assassinated, which was accordingly done.

While the father was waiting at home anxiously expecting his son's return, there came a messenger announcing the fate that had befallen him. Takagi, bent on revenge, immediately siezed his sword and started out, and his daughter who would not permit her father to go alone, siezed a *nagi-nata* (curved halberd used by women) and followed him. Together they went to the *Kuchô* to inquire into the particulars of the murder. The *Kuchô*, however, refused to give any information, and when Takagi raised his sword to attack him, he was shot dead with a revolver which the *Kuchô* had in readiness. The girl then attacked the *Kuchô* with her halberd, and was on the point of overpowering him, when a member of the private school named Murata rushed in and interfered, giving the *Kuchô* an opportunity of escaping. Teru then turned on Murata and compelled him to seek safety by flight. The *Kuchô* then returned with five members of the School Party. Teru still defended herself, but by force of numbers was at last siezed and bound. She was then taken to the Private School and tortured, but refusing to make any explanation, she was put in prison. She managed, however, to make her escape, believing that at some future time she could accomplish her revenge, and is still living in the *Ken*.

From the *Akébono Shimbun*.

The Tôkiô *Fu* has memorialized the Central Government concerning the advisability of prohibiting the selling of newspapers in the streets by the sellers crying out the contents of

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the papers, as they at times cry out in a loud voice certain events before the very houses where they occurred.

From the *Hôchi Shimbun.*

Small-pox has made its appearence in Ibaraki *ken* (Mito) and sixty persons have been attacked, of whom eight have died.

Wednesday, 12th.

The *Sumenoura Maru* still remains ashore southward of Treaty Point, where she took the ground yesterday, despite the efforts which have been made to get her afloat. These will be resumed to-day, probably with better success.

From the *Akébono Shimbun.*

The number of the local officials of Fukuoka *ken* was largely increased during the time of the Kiushiu rebellion, but on the return of the Governor, who is at present in Tôkiô, it is expected that great reductions will take place.

The Kanagawa *Kenchô* has twice requested the Department of Home Affairs to grant the sum of 20,000 *yen* for the repairs of the harbour, river and roads, but the request has not been entertained.

From the *Hôchi Shimbun.*

Sir Harry Parkes visited the Kuazoku School at Kanda, Tôkiô, on the afternoon of the 10th instant at 4 p.m., where he witnessed the pupils at their studies, and was afterwards entertained at dinner, Their Excellencies Sanjô, Iwakura, Ôkuma, Kawaji and other high officials being also present.

The Chinese Minister, who is expected to arrive on the 12th instant, will take up his residence in the house of H. Ex. Mori Arinori, at Kobiki-chô, Tôkiô.

From the *Nichi Nichi Shimbun.*

On the 6th instant the *Daijôkuan* notified Generals Yamagata, Kuroda and Saigo that they would hereafter be granted an annual pension of seven hundred and fifty *yen*.

From the *Osaka Nippô.*

It is rumoured that Mr. Watanabe, the Governor of Osaka *Fu*, will be appointed to an office in the War Department.

SECOND NATIONAL BANK.

(Dai-Ni Koku-ritsu Ginko.)

Statement for the week ending 8th December, 1877:—

Total Amount of notes (dollars) received by us from the *Shihei-rio*		1,200,000
On hand	325,745	
In circulation	874,255	
	1,200,000	
Security		874,255
In Foreign money:—		
In dollars	646,139.43	
In Bank notes and cheques	98,618.57	
Deposited with Foreign Banks	50,000.00	
	794,755.00	
Do. in native currency	79,500.00	
	874,255.00	

Thursday, 13th.

The *Mainichi Shimbun* states that His Ex. Okuma Shigenobu, the Minister of Finance, will next year visit Russia on special Government business.

The *Nichi Nichi Shimbun* says that H. M. the Mikado will attend the *Daijôkwan* to-day, to preside at a special Council meeting, which will be attended by the *Daijin, Sangi*, and the principal members of the *Genrô-In.*

From the *Nichi Nichi Shimbun.*

The ex-*Daimiô* of Aidzu entertained on the 11th instant, at his residence in Tôkiô, some six hundred of his former retainers who fought for the Imperial cause in the recent war in the South.

Major Jourdan, of the French Military Mission, was honoured by an interview with H. M. the Mikado on the 11th instant, previous to his leaving Japan to return to France on the completion of his engagement.

From the *Akébono Shimbun.*

Mr. Tani, a member of the *Risshisha* of Tosa, has been for some time confined in the prison of the *Daishin-In*, awaiting a judicial investigation of the charges brought against him. His brother has now arrived in Tôkiô from Tosa, and has petitioned the authorities for permission to have an interview with the prisoner.

Friday, 14th.

The arrival of the *Hoi-hon*, with the Chinese Embassy, may be looked for some time to-day.

St. Andrew's Day was celebrated in Shanghai according to ancient custom by a dinner, to which about sixty sat down. In Hongkong the recognition of Scotia's patron Saint took the form of a ball at the City Hall, and is characterized by the Press as one of the most successful assemblies of the kind ever given in the Colony. The Governor, Mrs. Pope Hennessy and all the notables of Hongkong were present. The floral decorations of the Hall seem to have excited general admiration.

From the *Chôya Shimbun.*

On the 11th instant five hundred police men who had been stationed at Kagoshima, returned by the *Tsuruga Maru.*

From the *Mainichi Shimbun.*

The branch of the Second National Bank which has been established at Mayebashi in Joshiu, has done very well this season in silk, and as the price of that article lately advanced very considerably, the Bank has made a profit of some 50,000 *yen.*

From the *Nichi Nichi Shimbun.*

Of the 23,391 men belonging to the provinces of Satsuma and Osumi who formed part of the rebel army in Kiushiu, 2,773 are reported as having been killed, 2,531 as wounded, while 2,673 are put down as missing.

From the *Hôchi Shimbun.*

The Kagoshima *Kencho* will shortly be removed to Sakurashima.

From the *Akébono Shimbun.*

The number of licenses issued by the Department of Home Affairs to druggists in the different *Fu* and *Ken* throughout the Empire, has already exceeded one hundred thousand.

About sixty different applications have been made to the Finance Department, for permission to establish banks.

Saturday, 15th.

The *Hôchi Shimbun* says that a Rifle Match will be held at the Military College, Toyama, Tôkiô, on the 16th instant, under the Presidency of His Ex. Yamagata, the Minister of War, who will be assisted by Admiral Kawamura as Vice-President. The shooting grounds will be thrown open to both natives and foreigners either as spectators or competitors, and firing will commence at 8 a.m. and continue until 4 p.m. Any sort rifle may be used, and any competitors not having rifles of their own, will be supplied on the ground with any weapon they may fancy which the College possesses, free of any charge, but the ammunition used must naturally be paid for. The range will be 300 yards, at which there will be a first and second class target, the former having a fourteen inch bull's eye surrounded by five circles having each a comparative value. The second class target will have only a sixteen inch bull's eye. Ten prizes will be allotted to the first class target, the highest being a silver cup, while there will be fifteen prizes to compete for at the second class target, the first prize being a watch. The entrance fee for the first class target will be 2 *yen* for ten shots, and for the second class target 30 *sen* for ten shots.

From the *Akébono Shimbun.*

On the 12th instant, at 3 p.m., H. I. H. Arisugawa-no-Miya, H. E. Higashi Kuze and many other prominent persons were entertained at dinner at the Kuazoku School.

From the *Hôchi Shimbun.*

Maida, a police Inspector now in Kagoshima *Ken*, has sent a request to the Central Government that he may be provided with the means of assisting the poor and destitute within the *Ken.*

The Army Department is about to send two hundred horses to the Kumamoto and Kagoshima garrisons.

PORT AND LIGHTHOUSE DUES.

A FOREIGN vessel coming into one of the treaty ports pays $15 on entrance and $7 on departure. After the lapse of a year another sum of $15 may be demanded, but otherwise the dues we have mentioned are the only ones a foreign vessel has to satisfy. Perhaps when the ports were first opened this was sufficient, though even then $15 a year was a small rent enough to pay for a berth in the harbour. But there can be no doubt that under the changed circumstances of to-day, the impost is altogether disproportioned to the benefits which ships visiting the Japanese coast enjoy. During the last seven years an extensive and well organised system of lighting the principal points of the coast has been established, and a glance at the Lighthouse charts or maps published by the Department of the *Kobusho* in charge of this important branch of the public service, will show that the needs of vessels approaching Japan from China or America —the vast majority of which are, of course, under a foreign flag—have been specially attended to, and that more care indeed has been taken to render intercourse between Japan and foreign countries free from danger, so far as the perils of this coast are concerned, than to protect the native interport trade. It appears that some fifty lighthouses in all show the dangers of the picturesque shores of this storm-begirded land to the anxious mariner, and assist him with their welcome gleam to feel his way through the gloom to his appointed destination. Not one of us but should recognise with gratitude the generous sentiment that has prompted the Government of this country to establish at a vast outlay, and to maintain at an annual expense of probably not less than from one hundred and fifty to two hundred thousand dollars, a system of lights which renders the access to Yokohama as safe as that of almost any port in the world. The suggestions, first made we believe by the British Minister, as to the advisability of lighting the coast, were met with an alacrity that showed the earnestness of the desire entertained by the Government to conform to the requirements of modern civilisation. With a generosity by no means common, expensive works were undertaken, less for the benefit of the country itself, whose mercantile fleet was at the time comparatively insignificant, than for the advantage of foreigners, without demanding from the latter any guarantee or engagement whatever to bear a just share of the expenses of maintenance. Within a few years all the leading points of the approaches to the principal ports were furnished with lights of the newest construction. Efficiency was in no case sacrificed to economy, and the series of lighthouses which the Government may with justice boast of having established, are managed with a careful attention to the needs of navigation that leaves nothing to be desired. At least, we have heard of no instance in which the service has been negligently or insufficiently performed. What port and light dues are levied upon vessels within British waters we are not able to state with accuracy, but we are sure that at least as many pounds are levied in England as dollars in Japan, and we cannot but admit the justice of the demand of our contemporary, the *Kinji Hiôron*, in its issue of the 3rd inst., that some more real contribution toward the expense of maintaining the lighthouses should be enforced upon foreign vessels than what is at present exacted. Our contemporary's sneer, however, at the avariciousness of foreigners is wholly unnecessary, for there can be no doubt that any just and reasonable proposition to increase the existing dues would be met by our representatives in a similar spirit, with the full approval of the nationalities whose interests they protect.

Nor is it alone to assist in defraying the expenses of maintaining the lighthouses in a state of efficiency that port dues of a sufficient amount may be claimed. The government and regulation of the harbour is an important element in its economy, and the cost of a harbour-master and a proper staff ought for the most part, if not wholly, to be provided for out of the dues.

Finally, we enjoy under the present Government some advantages that we neither possessed, nor hoped to possess, under what we may already term the *ancien régime*. These, under existing treaties, are in great measure almost free gifts to us, for which a heavily burdened and far from wealthy country has to pay. This is not a satisfactory position, and we ought to be as desirous as the Japanese themselves to put the matter upon a more equitable footing. It is better to offer than to be asked to do what is right and just. What harbour dues are levied on Japanese vessels in Yokohama and the other treaty ports, we are not aware, but if like dues were imposed upon foreign vessls we cannot see that there would be any cause for complaint. As our contemporary somewhat unnecessarily remarks, the light of lighthouses, unlike the light of the sun, costs money, and must be paid for by someone, and should in justice be paid for, in part at least, by those who directly profit by it. Whatever complaints those among us most given to grumbling may have to bring against the Government, they can have none to formulate against the Lighthouse Department, and we feel sure that no serious opposition will be offered by the community to foreign vessels being made to contribute a fair proportion of the expense of maintaining establishments essential to their safety.

The Band Promenade which was to have taken place in the Public Gardens last night (Friday, 23rd Nov.), was stopped under somewhat extraordinary circumstances. The paths were lighted up in the usual manner with Chinese lanterns, the Band was on the spot ready to commence, and a large concourse of persons had assembled, when an order was received from Mr. Hennessy requesting the Band to retire. On seeing the Band fall in and march off, most people in the Gardens were seized with blank astonishment, and it was some time before the connection between the manœuvre and the accident on board the *Yesso* on Thursday was clearly established. We must confess the action of Mr Hennessy on this occasion is about the most surprising display witnessed. Had the catastrophe in the harbour occurred yesterday, we could very well understand the propriety of His Excellency intimating his desire at an early period of the day that the proceedings should be postponed, but this sudden sending of the public about their business last night, much as if the community here were overgrown children, lacking in both sympathy and decency, seems to be regarded in the Colony to-day, and certainly was in the Gardens last night, as favouring somewhat of an insult. The attendance in the Gardens shortly after 9 o'clock promised to be one of the largest of the season, and chairs and pedestrians were pouring in the direction of the gates for fully three quarters of an hour afterwards. This circumstance alone is sufficient to indicate that the prohibition of the proceedings was an idea peculiar to His Excellency, to say nothing of placing the veto on the affair at the last moment, without the least notice. After the matter had gone so far, His Excellency might, under any circumstances, have permitted the Promenade to proceed. The evening was such a lovely one that many persons had come long distances—some over the water, and others from the distant ends of the Colony. It is exceedingly disagreeable to be reminded in this practical manner what miserable sinners we are in this Colony, and of the acuteness of the feelings of our chief administrator. The whole matter seems to indicate the possibility that during the forty days of Lent we shall get the import of meat into the Colony prohibited.—*China Mail.*

SPIRIT OF THE JAPANESE PRESS.

Localization.

("Akébono Shimbun," 10th December.)

The head officials of the various *Ken*, or representatives who by the Imperial order have come to Tôkiô as Commissioners of the Exhibition, have received orders from the Central Government to remain in the capital for a short time, although the Exhibition is closed.

The object of issuing such an order is not clear to us. Report has it that His Majesty the Emperor is desirous of questioning them as to the condition of affairs in their various districts, and to learn the opinions of the various local officials, but we cannot say if the rumour is correct. But it is certain that the Emperor wishes to bring about a more satisfactory state of things, and to this effect made last year a journey toward the North, while this year edicts to improve the condition of the poor have been issued. In view of these facts the above report may not be entirely untrue.

Supposing it to be well founded, the people ought to show their gratitude for the great care and anxiety displayed by the Emperor on their behalf. But the praise is not the only duty of an editor, and we must attentively consider in what direction the Emperor's mind is tending and the probable result. The localization of power and revenue is a matter on which writers have repeatedly dwelt. Now that the war is over it is time that the administration should act in such wise as to enable the people to enjoy the blessings of permanent peace. Localization is one of the chief means towards such an end, and this view is shared by the public. We hear that the Cabinet are now of opinion that no change should be made in the Government Departments, and that the chief aim of our rulers is to carry on the administration as at present, making no immediate changes in the local Governments, only by degrees giving such power and revenue to the local authorities as experience may seem to warrant. These views seemed to be shared by the local authorities in acknowledging the receipt of the Imperial command.

We have stated what we believe to be the aim of the Government, but must at the same time confess that nothing with regard to the secrets of the Government can be declared with any certainty. But we cannot refrain from remarking that as six years have passed since the *Han* were abolished and *Ken* established, the Government has had ample time to prove what form of administration is the best. Why cannot it therefore decide, in accordance with public opinion, to yield to the local Governments a certain amount of power and revenue? It may be that as such an act affects the welfare of the whole nation, the Government is unwilling to commit itself to any hasty measures, and thus though it may not be carried into effect directly, we cherish the hope that it will one day come to pass and the people long enjoy peace and prosperity.

We have also heard it reported that a certain Minister said that in order to make up the expenditure required in the suppression of the Kiushiu rebellion, great reforms must necessarily take place in the Central Governments, which would to some extent affect the local Government. Certain other Ministers opposed this view, saying that although the expenses incurred had doubtless been very great, the Government must not neglect its duty by cutting down necessary outlay, and thus leaving undone certain works which ought to be carried out; and that though such reduction might meet the present emergency it might be productive of some great calamity in the future. This would involve other changes, and thus would the Government be ever appearing in a play of reforms. The Central Government has entire control over the affairs and revenue of the country, and surely it would be possible to devise some means for defraying the cost incurred by the war. Thus the representations of the Minister first alluded to were useless.

Now we know not whether the above is true or not, but we believe that the object of the Emperor in detaining the various local officials is the future welfare of the people. To bring this about we maintain that localization must take place, and thus we have referred to the current rumours, and wait to see what will result.

Good Intentions.

("Kinji Hiôron," 8th December, 1877.)

Who can say that our Government is tyrannical? We ourselves believe it to be a most beneficent government, detesting anything like oppression. There are some acts of the Government which may perhaps be so interpreted, but they are not actually so, being oppressive merely in appearance, even as diarrhœa is a disease much resembling cholera, but though much dreaded, it is not so fatal in its effects. Now it would appear at the first glance that some of the acts of our Government resemble oppression as diarrhœa resembles cholera, but if we penetrate into the actual motives which induces it to act in such wise, we shall find that there is much difference between the real and seeming oppression as between fire and water.

When a Government interferes with the affairs of its people to any considerable extent, it is apt to get the name of being arbitrary. But one might as well call a sage, cheat or thief. The intermeddling of the present Government with the people's affairs arises from the feelings of interest and kindness it has towards its subjects, and it is called oppressive only by those who are near-sighted or out of their wits.

Our Government in its benevolence, takes compassion upon the ignorance of the people and seeks to lead them in all their doings by the examples it lays before them. It is annoyed in no slight degree at seeing how many people are unable to make a living, and thus it gets to work reforming the laws and altering the constitution in order to promote their welfare. Thus do we say that our Government is a most merciful one.

Hot headed writers are apt to accuse the Government of harshness. But such accusations arise from the patriotic feelings of those writers, while the Government deems them disturbers of public peace. Their ardent expressions, in fact, are caused by their zealous patriotism, and by their not understanding that the apparently oppressive measures of the Government are dictated by the same desire, the common welfare. Thus the Government and the writers fail to understand each others' mind. Now when this unhappy misunderstanding exists it causes earnestly thinking people to fear for the future, and to hope that such a state of things will soon be amended.

Now in order to avoid the calamity which seems to threaten us in the future, what is to be done? The Government of the country must be shared by rulers and people so that each may learn to understand the motives of the other; the people no longer crying out against the Government as oppressive for actions done in kindness, nor we be deemed as cheats or thieves. Thus may we achieve our independence and becomes the England of the East.

OUT OF BOUNDS:

Being an Account of a Recent Trip into Shinshiu.

(Continued.)

Once more shod in comfortably fitting boots which had undergone a course of stretching and oiling at the hands of a native Crispin, and by which I thankfully replaced the *waraji* and *tabi* which had but in name protected me from the inhospitable stones of the Sasago pass, I left Kôfu for Daigara—sometimes I believe called Sunahara—distant seven *ri*. I have seen no better road in Japan, not excepting even those around Yokohama, than the new Sinshiu-kaido, at least as far as Nerasaki. Broad, well levelled, and of excellent material, it is a credit to the district through which it passes. And what a lovely fertile plain does it traverse. To the slopes of the distant hills it is a sea of ripening grain, dotted with farm houses having a comfortable well-to-do aspect, surrounded by perfect groves of persimmon trees, gay in autumn foliage, and with their branches bending under the weight of their golden fruit of a size and flavour unknown to dwellers in less favoured districts. The first frosts had ripened the more early kinds and everyone was eating persimmons. The baby on its mother's back had its grubby little face half buried in the luscious pulp, with which it was plentifully anointing the back hair of its parent, who occasionally remonstrated when a larger portion than ordinary was permitted to fall down her bare back. The children playing in the roads were for the most part a mass of persimmon. The pack horse man munched as he plodded on with his patient animal, while nearly every traveller carried three or four huge specimens tied up in his blue towel. And here are an ancient couple, who run to the road side to see me pass. The good women, hearing my expression of wonderment at the enormous size of the fruit hanging on a tree in her garden, gathers thereof and hands to me and my servant, and then like another Eve, plucks and gives to her husband, who very much indeed like another Adam in point of clothing, at first refuses, but is beguiled to eat thereof by his helpmate at last taking the first bite, or more properly mumble, and handing the remainder to him, when without a murmur it is devoured. It

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

was quite an idyllic scene and Arcadian in its simplicity. Considering the venerable age of the actors, and that they possessed but one front tooth between them, the incident was almost touching to witness, as showing how connubial affection can survive the decay of youth and beauty.

When I arrived at Nerasaki, I was sorely tempted to try the old road over the mountains, the scenery on which I was told was very fine. The warnings that I received, however, of broken bridges and serious land-slides showed me that with half the day gone owing to my medical attendance in the morning, it would be unwise to attempt it. At the same time, wishing to leave the newly made high road, I decided on taking a middle track which traversed the plain between the Shinshiu-kaido proper and the base of the mountains. A charming road of white sand following the course of a foaming, turbulent mountain stream. Icy cold, too, as I soon had the opportunity of finding out, for coming to where a bridge ought to have been, there was nothing but a body of labourers and one round beam laid across the rushing torrent. An attempt was made, while we waited, to lay a second beam, but failed. Not being a born Blondin I could not venture to walk a slippery pole laid across a broad, deep, and very angry looking stream. There was no help for it, then, but to go some little distance below where the force of the water was lessened by the increased breadth of the river, and stripping off my clothes, to take hold of a long and strong bamboo held at each end by a stalwart coolie, and thus make my painful and diagonal way for about fifty feet across the rocky bed. The power of the water was very great, it being almost to my armpits, and had I attempted to cross as I at first wished to do with only a pole, I should probably have been swept down with the torrent. Once more during the day did I have to repeat this performance, which resulted in my being as stiff and sore as a gentleman need be, for several days after.

As one approaches Daigara the scenery increases in beauty, and from a bridge that crosses one of the many streams that now so harmlessly bubbled and rippled and gurgled over and around the great granite masses, but to whose occasional irresistible power the trunks of mighty trees and far extending boulder covered tracks bore ample witness, the view as I saw it, was both imposing and beautiful. Through the wild broken country that slopes down to the plain came, flashing and foaming in the shallows and glassy green in the deep still pools, a mountain torrent. Solemn in purple gloom rose the lower range of pine clad hills, while mysterious amid the wreathing vapours and changing mists, above them rose the precipitous mass of Kumagataki, capped with the first snows of winter.

"Grey, huge beyond all telling, and the host of the heaped clouds,
"The black and the white together on the rock wall's coping crowds;
"But whiles are rent athwart them, and the hot sun pierceth through,
"And there glow the angry cloud caves 'gainst the everlasting blue,
"And the changeless snow amidst it; but down from its cloudy head,
"The scars of fires that have been glow dim and dusky red;
"And lower yet are the hollows striped down by the scanty green,
"And lingering flecks of the cloud host are tangled there between.

Daigara is a delightfully neat and quiet village with capital accommodation. The houses here, with their dark wood fronts relieved by grey and cream coloured plaster, their broad overhanging eaves and stone strewn roofs, give the scenery an extraordinary resemblance to that of Switzerland, to which the snow capped, boldly outlined mountains with their fir slopes add not a little. Everything was as neat at the inn as in the village; attendance admirable, cooking worthy of a Japanese *chef*, quilts soft, clean and plentiful, so that I resumed my tramp next morning with reluctance, feeling that I was, for the sake of getting over more ground, leaving behind me scenery and comforts that I should not often meet with. And I was not wrong, for Daigara still remains in my mind as one of the most comfortable and attractive of the places that I came across during the whole course of my trip, and I know of no place where a landscape artist could find in the immediate neighbourhood more charming or diversified scenery, or the idler dream away more pleasantly the long hours of a summer's day.

There is likewise plenty of opportunity for mountain climbing, the ascent of Kumagataki being, I should imagine, no light undertaking. I wished to attempt it, but the early fall of snow and the shortness of the days would render it, I was told, both difficult and dangerous. It would, moreover, have been necessary to camp out in the woods for a night, which I did not feel inclined to do with nothing to comfort the inner man but cold rice dumplings, which are not sufficiently warming when the temperature is below freezing. I therefore left the glory of standing on the top of Kumagataki to some more adventurous and less self indulgent fellow barbarian.

But there is still another reason why I shall always think of Daigara with fondness. Here first did I eat the delicious *matsutaki* (a kind of mushroom which grows from the roots of fir trees). The forests and hills in this neighbourhood are celebrated for these delicacies, and not only can I bear witness to their deliciousness but to their entire wholesomeness. By Japanese they are held in the highest esteem, and large quantities find their way to Tôkiô and the principal towns. To be enjoyed in perfection they must, however, be eaten fresh, and to eat them fresh one must go to Daigara. Let the man who thinks he has exhausted the pleasures of the world, after a twenty mile walk in a sharp bracing atmosphere, including the undressed fording of two icy rivers, and excluding all lunch but two raw eggs, find himself at last, after a good hot bath and cold douche, in a comfortable room, with a dish of *matsutaki* served piping hot by a dainty little damsel, with the rosiest of cheeks, the sweetest of voices and shyest of ways, and he will confess that life hath not yet lost all its charms, and will do as Oliver Twist, or as I did—ask for more. Here likewise did I first taste a properly prepared *chawan mori*. Do you know, by the by what is a *chawan mori*? Then art thou in a parlous state, and I would say to thee, on some occasion in thy wanderings, dispense with the tinned soup—appropriately named as to flavour—and the liver destroying Oxford sausage, and order this triumph of Japanese gastronomy. A pleasant and savoury custard containing all kinds of delightful surprises. Like little Jack Horner you can put in your thumb—or your chopsticks, which it is preferable to do, as it is one of the chief excellencies of this delicate dish to be scalding hot, thus differing entirely from all other Japanese dishes and causing much tearful suffering to the unwary one—and pull out delicious titbits, of derivation unknown but of niceness unquestionable. The secret of its preparation I shall reserve until the publication of my cookery book to be entitled Japanese Dainty Dishes, which I have no doubt will have as great influence in revolutionizing domestic cookery, as the subtle harmonies of Japanese design have had in giving a fresh character to English decorative art.

The next morning I tore myself away from all the delights and temptations of Daigara, and started early for Suwa in Shinshiu, distant about twenty-five miles. The day's walk was brimful of pleasure. Such crisp sunny weather, causing the blood to tingle in a surprisingly youthful manner, and making one forget that one had got into the twenties, to say nothing about being very well out of them. The road of fine granite sand wound its white length through forests of pine, whose sad coloured stems were turned to gold, and purple and carmine with the creepers that covered them; through villages of singular neatness and with a settled, comfortable air which I have never met with before in Japan, before all of whose Swiss looking houses rows of trees are planted, and whose streets are all alive with the never ceasing click of the silk loom and twang of the cotton bow. Such fat, sturdy, apple-faced children, all of whom throughout this portion of the country and throughout Shinshiu, from the tiniest little tot just able to toddle, to the youth or maiden, evidently in their "last half" at school, stopped and bowed to the ground politely to me as I passed; so that at times on entering an important town such as Suwa, not wishing to allow any to pass unacknowledged I had much ado to keep pace with the salutations. On the road a bull's eye or bean cake, of which a supply was kept on hand, was the acknowledgment I bestowed on infantile politeness, but such a course of action in a village or town would have resulted in speedy financial ruin.

Just before arriving at Tsutaki, a rushing stream, which makes its noisy way along the narrow valley and is crossed in fine weather by a narrow plank bridge, marks the boundary between the provinces of Koshiu and Shinshiu, as

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

is recorded on a stone and post on the Shinshin side. At Tsutaki, a few *chô* further on, the first village in Shinshiu, I look my tiffin, being attracted thereto not by the tempting look of the place, which was a very humble road-side tea house open to three of the four winds of heaven, nor by the charms of the cook who was an old lady of extreme lowness of stature, immense breadth of body and surpassing ugliness of features. Neither was it on her husband's account,—at least I presume he held that relationship from the startlingly sharp manner in which she addressed him—who sat by the *irori*, (a square fire place sunk in the middle of the floor) with his feet in the ashes, stirring some kind of stew which was simmering in a pot hung over the fire, with a pair of *hashi* (chopsticks) which, with apparent indifference he applied to his mouth or to his mass of tangled hair in an alarmingly thorough manner. These little drawbacks, however, I did not notice until the preparation of my lunch gave me time to look around, my attention having been first called to the subject of tiffin by an extremely savoury and appetizing smell and by my servant's pointing out to me two carcasses of animals, in appearance something between a goat and a chamois. I found they were called *iwashika* (rock-deer) and belong, I presume, to the latter variety. They are as large as a full sized goat, with very thick hair of an iron grey colour, having here and there a shade of brown. The horns exactly resemble those of a chamois. Eating some of the meat prepared in a chafing-dish with onions and sweet sauce—let me at once calm the minds of my readers by assuring them that the cooking took place over a charcoal brazier, and nowhere in the vicinity of the presiding deity of the fire place—I found it tender but almost tasteless. Many of these animals are shot by the hunters in this neighbourhood, but the pursuit of the game among the dangerous precipices of Kumagatake is not without excitement and risk. Monkeys, too, are found in considerable numbers, and certainly one of the most unappetizing sights I have seen for many a day, was the freshly severed head of a very large monkey which was hung up to the chain supporting the iron pot presided over by the extremely unclean old gentleman. There it hung, ghastly and grim and pallid, in colour and expression painfully human, the dead face seeming to change amid the rising smoke. The whole of the red tint had vanished from the face, and at once rushed to my mind the vision of an execution I was once foolish enough to witness. It had been my intention to sacrifice my feelings on some occasion when appetite and opportunity combined, and satisfy my curiosity by tasting monkey. I can now give my solemn assurance that I will never willingly commit such an act of cannibalism.

The first view from the high road of the plain of Suwa, encircled by its bold mountains, its ripening grain fields and bronzing groves, its blue lake and clustering hamlets, all softened and blended in the golden haze of an autumnal sunset, was very beautiful, and almost Italian in its effect, but the illusion was dissipated on entering the town of Suwa,—Shimono Suwa as it is properly called—which is as dirty and uninteresting as most Japanese country towns, and offers a marked contrast to Kôfu and the villages on the road. The lake seen from the town is a tame piece of water, while the plain around it is one vast field of rice. The hotel accommodations are poor, and at the lower end of the town. I had at first some trouble to induce any one to receive me, for what reason I know not, but on my stating quietly my determination to apply at the police office, and starting off to carry it into effect, I was called back and provided for by a landlady who did her best to make me comfortable. It was not her fault that she did not succeed, the late gale having taken the paper out of most of her windows, and her quilts and mattrasses being of the hardest and most unyielding nature. When I went to my bath I was surprised to find that it was a natural hot sulphur spring, one of the many which exist throughout this section of the country. With the exception of a strong sulphurous smell, however, the water apparently possessed no extraordinary qualities and I failed to detect any sulphur deposit. From my window in the morning, looking over continuous fields of ripening rice to the blue surface of the lake unruffled by the faintest breath, I saw the remains of the old castle of Suwa, from the highest point of which I could discern glittering in the morning sun, some very striking snow clad peaks of far bolder form than any mountains I had seen in Japan. I found upon enquiry that these were the peaks on the borders of Hida. This decided my route, on which I had yet scarcely determined, and I set off for Matsumoto, the chief city of Shinshiu, viâ the Shiojiri pass.

From Suwa the road rises and runs along the hills overlooking the lake, and many a lovely picture did I see, formed by different glimpses of the gleaming lake set in frames of richly tinted foreground, and trees clothed in autumn foliage that daily increased in brilliancy. The weather was perfect, and for quiet beauty I have seen few scenes in Japan that could compare with those afforded me on this glorious morning. As usual persimmons everywhere, to which were added large quantities of quinces (*karin*) of strong fragrance and not unpleasant flavour, though extremely acid. I could not ascertain that they were used for any other purpose than as an ingredient in some medicine for the cure of colds. Chestnuts also abounded, fully equal in size to the produce of the Spanish woods, and of which a hatfull could be bought for a few cash. At Shimo-no Suwa, a much neater town than Kami-no Suwa, I got a horse for Shiojiri on the other side of the Shiojiri pass, the rate being very moderate, about ten *sen* per *ri*. The road from Shiojiri lay through a beautifully cultivated country, thickly filled with farm houses surrounded by orchards of persimmon trees, the boughs of which were loaded to the ground, and in some cases broken off with the masses of fruit. The ascent of the pass is short, only about half a *ri*, but steep, and as the sun was very hot, unpleasantly fatiguing. The road is, however, admirably wide and level, and carriages could pass over it with entire ease. From the summit of the pass there is a superb view both over the plain of Suwa and towards the mountains of Shinshiu and Hida. Far below on the Suwa side lay the plain, with its golden autumnal fields, where glistening lake, villages, and groves of pyramidal cryptomeria swam soft as a floating cloud in the Indian summer atmosphere, while looking toward the wild district I was entering arose the vast forms of a confused sea of mountains, towering range upon range in shadowy grandeur through the pale transparent vapour, and shutting in the plain where lies the capital of Shinshiu. As we descended along the fir-bordered road, made musical with the trickle of a rushing streamlet that jets out from the summit of the pass, the sunset threw magical lights upon the ever changing landscape, playing in a thousand fantastic flashes among the gnarled and moss grown trunks of the ancient trees. Then, after the crimson flush that for a few moments dyed the scene with its mystic light had faded in the valleys into cold purple and ashen grey, on the towering peaks of the distant mountains the early snows broke forth into blushes as they were kissed by the last rays of sunset, which seemed to linger fondly on the rose crowned heights.

From Shiojiri to Matsumoto is four *ri*, and as the proper rate for *jinriksha* is only six and a half *sen* per *ri* and twilight was fast merging into night, my faithful but extremely frugal minded attendant—who constantly lectured me on the sinfulness of buying lollipops, and whom the hire of an extra coolie was sufficient to render miserable for the day—generously acceded to my earnest request that he would permit me to go to the extravagance of riding to Matsumoto, where we arrived very cold and ravenously hungry at about eight o'clock. Thanks to instructions received from a benevolent but evidently interested old gentleman on the road, we were able to go direct to an inn, situated in the best portion of of the town, and where, had everything been in keeping with the cordiality of our reception, we might indeed have esteemed ourselves blessed above travellers. But alas! for deceptive appearances!

The Chinese Government is making arrangements for lending the China Merchants S. N. Co. a considerable sum of money, more than two million taels, without interest; and also for donating them, as we understand, a handsome sum equivalent to four years' interest on their capital. This is in lieu of a postal subsidy and the services rendered by the Company in conveying troops, for which they have as yet received no direct remuneration. The quantity of tribute rice conveyed is to be increased by 285,000 piculs (or shih) making about 600,000 shihs, or 840,000 piculs.—*Shanghai Courier.*

THE MAIDEN OF UNAHI.

By Basil Chamberlain, Esq.

Read before the Asiatic Society of Japan, on the 8th December, 1877.

It would seem natural to suppose that, in proportion as a land is strange and distant and but little known, so should it be easy, when once the key to its literature has been obtained, to draw forth therefrom treasures new and old, the European interpreter being confronted by no other difficulty than that of choice among such a superabundance of materials. This natural supposition, however, like many other natural suppositions, is not substantiated in practice. Just as it were vain to attempt to argue with one whose fundamental assumptions are diametrically opposed to a man's own, so is it well-nigh impossible to find anything that would be suitable to an English audience among the mountainous masses of a literature, which, like that of Japan, is swayed by canons of taste in all essentials different to those that rule the prose and poetry of Europe. What, for instance, save weariness could result from the consideration of a story whose point lies in a reference to some older tale, itself, perhaps, owing its interest to circumstances and conditions, which, however familiar to the natives, would have to be laboriously explained in order to make them at all comprehensible to the European reader? Or, again, how could a European appreciate a stanza of poetry that derives all its piquancy from some untranslatable play upon words? And so it goes on, to the end of the chapter: plays upon words, allusions, apparent want of point, the pourtrayal of a state of manners, deeply interesting in itself, but stamped by peculiarities that render it unfit for discussion in our more prudish tongue, and a score of other ever-recurring characteristics must necessarily continue to keep nine-tenths—perhaps I should rather say ninety-nine hundredths—of the literature of this country a sealed book to such as are debarred from studying it in the original; and he who would attempt to give his countrymen some notion of the way in which this people write, of the mental atmosphere in which they live, turns away disheartened from almost every book that had at first sight seemed a promising field for translation.

The "Yamato-Monogatari," or "Tales of Japan"—one of the best known classics of this country,—are a case in point. The date of their composition, though not known with accuracy, is generally placed in the tenth century,*—a conclusion which there seems no reason to doubt, as it has both tradition and internal evidence in its favour; and the almost childlike simplicity of the style, and, above all, the purity of the diction, must ever make the work worthy the attention of the student of the standard literature of Japan. When we come, however, to analyze its contents, and to reject such of them as are rendered unfit for translation by one or other of the peculiarities above referred to, scarcely anything remains,—nothing, perhaps, save two or three very simple love-stories recorded in its latter part. It is with one of these old-world love-stories, as given in the pages of the "Yamato-Monogatari," and as likewise forming the theme of two or three of the poems of the very ancient "Mañefushifu" collection, that this paper is concerned. Reversing the chronological order, the later development of the story shall be given first, and then the earlier poetical version, dating probably from early in the 8th century. The story is believed to be, in the main, historical; and the maiden of Unahi's tomb, which is called the *Wotome-dzuka*, or more commonly, but improperly, *Motome-dzuka*, is said to be still shewn somewhere between Kaube and Ohosaka, though I may state that, on the occasion of a hurried visit to that part of the country, I was unable to discover it. Possibly, in this, as in so many other instances, the railway has obliterated the traces of the past.

The account given in the "Yamato Monogatari" is as follows:—

In days of old there dwelt a maiden in the land of Setsutsu, whose hand was sought in marriage by two lovers. One, Mubara by name, was a native of the same country-side; the other, called Chinu, was a native of the land of Idzumi. The two were alike in years, alike in face, in figure and in stature; and, whereas the maiden thought to accept the wooing of him that should the more dearly love her, lo! it fell out that they both loved her with the same love. No sooner faded the light of day, than both came to do their courting, and when they sent her gifts, the gifts were quite alike. Of neither could it be said that he excelled the other, and the girl meanwhile felt sick at heart. Had they been men of lukewarm devotion, neither would ever have obtained the maiden's hand; but it was because both of them, day after day and month after month, stood before the cottage-gate and made evident their affection in ten thousand different ways that the maiden pined with a divided love. Neither lover's gifts were accepted, and yet both would come and stand, bearing in their hands gifts. The maiden had a father and a mother, and they said to her: "Sad is it for us to have to "bear the burden of thine unseemly conduct in thus care-"lessly from month to month and from year to year caus-"ing others to sorrow. If thou wilt accept the one, after "a little time the other's love will cease." The maiden made answer: "That, likewise was my thought. But "the sameness of the love of both has made me altogether "sick at heart. Alas! what shall I do?"

Now, in olden days, the people dwelt in houses raised on platforms built out into the river Ikuta.† So the girl's father and mother, summoning to their presence the two lovers, spake thus: "Our child is pining with a love "divided by the equal ardour of your worships. But "to-day we intend, by whatever means, to fix her choice. "One of you showeth his devotion by coming hither from "a distant home; the other is our neighbour, but his love "is boundless. This one and that are alike worthy of our "pitying regard." Both the lovers heard these words with respectful joy; and the father and mother continued: "What we have further in our minds to say is this: "floating on our river is a water-bird. Draw your bows "at it; and to him that shall strike it, will we have the "honour to present our daughter." "Well thought!" replied the lovers twain; and, drawing their bows at the same instant, one struck the bird in the head and the other in the tail, so that neither could claim to be the better marksman. Sick with love, the maiden cried out:

> Enough, enough! yon swiftly flowing wave
> Shall free my soul from her long anxious strife:
> Men call fair Settsu's stream the stream of life,
> But in that stream shall be the maiden's grave! ‡

and, with these words, let herself fall down into the river from the platform that overlooked it.

While the father and mother, frantic with grief, were raving and shouting, the two lovers plunged together into the stream. One caught hold of the maiden's foot and the other of her hand, and the three sank together, and perished in the flood. Terrible was the grief of the girl's father and mother as, amid tears and lamentations, they lifted her body out of the water and prepared to give it burial. The parents of the two lovers likewise came to the spot, and dug for their sons graves beside the grave of the maiden. Bnt the father and mother of him that dwelt in the same country-side raised an outcry, saying: "That he who belongs to the same land should be buried "in the same place, is just. But how shall it be lawful "for an alien to desecrate our soil?" So the parents of him that dwelt in Idzumi laded a junk with Idzumi earth, in which, having brought it to the spot, they laid their son: and to this day, the maiden's grave stands there in the middle, and the graves of her lovers on either side. Paintings, too, of all these scenes of bygone days have been presented to the former Empress,§ and, moved by

* One old tradition ascribes its composition to Kuwa-zan-in (the posthumous name of the Mikado Kuwa-zan, who abdicated A.D. 986); and another to the 3rd son of the celebrated poet Arihara no Narihira, called Arihara no Shigeharu, who flourished at the end of the ninth (and beginning of the tenth?) century.

† I have been unable to discover any other traces of this custom.

‡ Here is the original stanza, of which the above does not pretend to be more than a paraphrase:

Sumi-wabinu
Waga mi nage-ten
Tsu no kuni no
Ikuta no kaha ha
Na nomi nari keri.

I have, in the above paraphrase, spelt Settsu as it is pronounced. In the prose text I have, as usual, followed Mr. Aston's system of transliteration.

§ Viz., (as the commentary called "Yamato-Monogatari-Sen" supposes) the consort of the Emperor Uda, who abdicated A.D. 897, and died A.D. 931.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the pictures, many persons have composed stanzas of poetry, putting themselves in the place of one or other of the three persons of the story . . . . . (Here follow a number of thirty-one syllable stanzas that are not worth the trouble of translating, and the tale then proceeds thus:) Ceremonial garments, trowsers, a hat, and a sash were placed in a large hollow bamboo-cane, and buried with the one (*i.e.* the native of Unahi), together with a bow, a quiver and a long sword. But the father and mother of the other must have been silly folks, for they prepared nothing in like manner. The "Maiden's Grave" is the name by which the grave is called.

A certain wayfarer, who once passed the night in the neighbourhood of the grave, startled by the sound of fighting, sent his retainers to enquire into the cause thereof. They returned saying that they could hear nothing. But the wayfarer kept pondering on the strange event, and at last fell asleep. Then there rose up before him a blood-stained man, who, kneeling at his side, spake thus: "I "am sorely harrassed by the persecutions of an enemy, "and entreat thee to condescend to lend me thy sword that "I may be revenged on my tormentor." The request filled the wayfarer with alarm; nevertheless, he lent his sword, and, shortly awaking, imagined it to have been but a dream; yet in very truth the sword was missing; and, as he listened attentively, his ear caught the same terrific sound of fighting that had struck it at first. But a brief time elapsed before the spectre re-appeared, and exclaimed exultingly: "By thine honourable assistance have I slain the foe that "had oppressed me during these many years. From "henceforward, I will for ever watch over thy safety." He then told the tale from the beginning to the wayfarer, who, notwithstanding that the whole matter seemed to him to have an ugly look, would have enquired more particularly into the rights of so strange a story. But at that moment, day began to dawn, and he found himself alone. The next morning, from the foot of the grave a stream of blood was seen to flow; and the sword, also, was blood-stained. The tale seems a most uncomfortable one; but I tell it as it was told to me.

The "Mañefushifu" poet, Takahashi no Muraji Mushimaro, differs but little in his version of the story from the author of the "Yamato Monogatari," but still sufficiently to show that the latter was no mere copyist. Here is his ballad:

In Ashinóya dwelt a maid,—
The Maiden of Unái,‖
On whose beauty the next-door neighbours e'en
Might cast no wond'ring eye;

For they lock'd her up as a child of eight,
When her hair hung loosely still;
And now her tresses were gather'd up,
To float no more at will.

And the men all yearn'd that *her* sweet form
Might once more stand reveal'd,
That was hid from gaze, as in silken maze
The chrysalis lies conceal'd;

And they form'd a hedge around the house,
And "I'll wed her!" they all did cry;
And the Champion of Chínu he was there,
And the Champion of Unái.

With jealous love these Champions twain
The beauteous girl did woo:
Each had his hand on the hilt of his sword;
And a full-charg'd quiver, too,

Was slung o'er the back of each Champion fierce;
And a bow of snow-white wood
Did rest in the sinewy hand of each;
And the twain defiant stood:

Crying: "An 'twere for her dear sake,
"Nor fire nor flood I'd fear!"—
The Maiden heard each daring word,
But spake in her mother's ear:

"Alas! poor silly village-girl!
"What profits me my life?
"I cannot wed the man I love
"While lasts this jealous strife:

"At Hades' cross-road I'll await
"The issue of the fray."—
These secret words with many a tear
She whisper'd, and pass'd away.

To the Champion of Chínu, in a dream,
Her face that night was shown;
And he follow'd the Maid to Hades' shade,
And his rival was left alone,

Left alone,—too late! too late!
He dances in wild despair,
He gnashes his teeth, he screams and he yells,
And gapes at the vacant air:

"But no! I'll not yield!" he fiercely cries,
"I'm as good a man as he!"
And, girding his poniard, he follows after,
To search out his enemy.

The kinsmen, then, on either side
In solemn conclave met,
As a token for ages yet unborn
Some monument for to set,

That men might be telling of their loves
While heav'n and earth shall stand:
So they laid the Maiden in the midst,
And the Champions on either hand.

And I, when I hear the mournful tale,
I melt into bitter tears,
As though the fresh loss of some well-known friend
Had startled my loving ears.

There are in the "Mañefushi-fu" two other poems on the same subject. One of them, by the later poet Yakamochi, is scarcely worth quoting, being little else than a repetition of the ballad just given. But the other, also by Takahashi no Muraji Mushimaro, may perhaps be of interest to the Society. It runs as follows:

THE GRAVE OF THE MAIDEN OF UNÁÏ.

I stand by the grave where they buried
The Maiden of Unái,
Whom the rival village Champions
Did woo so jealously.

The grave should hand down her mem'ry
Till worlds shall be no more,
And men yet unborn shall love her,
And think on the days of yore:

And so, beside the causeway,
They pil'd up the boulders high,
To last till the clouds that o'ershadow us
Shall vanish from the sky.

And never a traveller passeth,
But stoppeth to turn aside,
And mourn o'er the grave of the Maiden;
And the country-folk, beside,

Ne'er cease from their bitter grieving,
But cluster around her tomb;
And men may still know her and love her,
And bewail the Maiden's doom,

Till, at last, e'en I stand gazing
On the grave where she now lies low,
And muse with unspeakable sadness
On the old days long ago.

‖ The proper spelling is *Unahi*, as given above; but the necessities of rhyme and metre compel me in this place to spell by ear, as in the case of *Settsu*.

ASIATIC SOCIETY OF JAPAN.

An ordinary meeting of the Society was held at the Grand Hotel, Yokohama, on Saturday, the 8th instant, the chair being occupied by Sir Harry Parkes, the President of the Society.

Mr. Satow said that he wished to explain the inconsistent transliteration of some of the Japanese words contained in his paper on the Introduction of Tobacco, read before the Society on the 10th November. In common with Mr. Aston, and, he might add several other students of Japanese both in this country and in Europe, he had arrived at the conclusion that in transliterating Japanese each sign of the syllabary should be represented by a separate combination of letters, and that the Japanese spelling should be followed, sign by sign, instead of the system of transliteration by ear being used. While the latter had hitherto been found to be the most convenient for popular uses, the former was of absolute necessity for scientific purposes, under which might be included the translation of Japanese texts, the study of etymology, and the compilation of Grammars and Dictionaries of the written language. In order to carry out this plan more thoroughly he had intended, in accordance with the suggestion of Professor Severini of Florence, to employ 'ñ,' to denote ん of the Japanese syllabary, instead of 'n' which had hitherto been used. The letter 'n' was required to represent the initial consonant of the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

ナ ニ ヌ チ ノ, written *na, ni, nu, ne, no*, and should not be used for ソ, which was employed in the syllabary to represent a sound which was in most cases originally ム, *mu*. Unfortunately, however, the fount used in printing the Transactions of the Society did not contain an italic 'ñ,' and consequently in several cases '*n*' had unavoidably been substituted for it.

Mr. Basil Hall Chamberlain then read his paper entitled "The Maiden of Unahi."

Mr. Satow observed that an interesting point in the paper which had been read was the mention of the ancient practice of burying with persons of importance, articles which might be supposed to be of use to them after death. In this case there were buried ceremonial garments, a bow and arrows, which formed part of the court costume of nobles at the time when the "Yamato Monogatari" was written, and it was quite natural for the author, whether a noble of the court or a Mikado, to attribute such rank to his hero. Notices of this practice were not numerous in Japanese literature, but the contents of some ancient graves which had been opened showed that it was by no means uncommon in early times. Precious stones or beads called *maga tama*, pieces of pottery and earthen images had been found. The images were substitutes for the living human beings and animals originally buried at the graves of persons of rank. In the Nihongi there was a story that at the funeral of a prince named Yamato-hiko no Mikoto all his retainers were buried alive round his grave; that they lived for several days in that condition and that their cries reached the ear of the Mikado, who desired his counsellors to find out some way of abolishing the ancient practice of sacrificing to a dead man those whom he had loved during his life. Subsequently, when the consort of the same Mikado died, he again consulted his chief advisers, as to the means of doing away with what had already been recognised as a bad custom, and by the advice of one of them, named Nomu no Sukune, a hundred workmen in clay were brought from Idzumo, who made clay images of human beings, horses and other things not particularized. It was thereupon decreed that in future clay images should be substituted for the human sacrifices customary up to that time. According to the date given in the Nihongi this change would have been made in A.D. 3, but the chronology of the early Japanese traditions recorded in that book is not to be depended on for exactness.

Mr. J. C. Hall, referring to the metrical versions given in the paper of the poems from the Manyôshu, and to others by the same hand previously published, warmly commended the good work which Mr. Chamberlain was doing in exhibiting to foreign readers in a worthy setting what, on such competent judgment, must be taken to be amongst the choicest gems of the Japanese lyric muse. Highly as their national poetry was esteemed by the Japanese themselves, however, it seemed at least doubtful if its merits were such as to entitle it to a high place amongst the world's literature. The Japanese, he said, have not a single epic poem, and their drama, judged by European standards, is yet in a rudimentary stage of development. Lyric poetry of a sort, in the primary sense of metre set to a musical accompaniment, they have in their lyric dramas, but in the wider sense of poems expressive of sustained emotion, their lyrics seem scarcely worthy of the name. In fact, the bulk of Japanese poetical literature consists of verses too short, in point of form, to be entitled to be called poems, and in point of matter, too full of conceits and historical, local or other allusions to be capable of effective translation into a foreign tongue.

In reply to some of Mr. Hall's observations, Mr. Chamberlain remarked that it was difficult in speaking of these subjects to bring forward positive proof of assertions made, and that the argument must of necessity often reduce itself to: "You think one way, and I think another." While admitting that the Japanese had neither any epics nor yet any didactic poems, he contended that they had many lyrics of great beauty, and that the poetry of the "*Noo*" (mediœval dramas) was very perfect in its way, referring Mr. Hall for the lyric poetry to the pages of the "Manefushifu," the "Kokinshifu," and the other numerous collections forming together the "Nijifu-ichi Dai-shifu." Mr. Chamberlain objected to the word "conceits" as applied to the greater part of the poetical productions of Japan, and, in defence of his opinion touching the lyrical power of some of the poets of this country, quoted (in a translation) a portion of an ode on the "Unsatisfactoriness of Life," by the poet Yamagami no Okura. Mr. Chamberlain also objected to the view that a body of literature must be judged by its adaptability to the purposes of translation or presentation to foreign minds, and held that beauty of form (a beauty necessarily confined to the original) constituted one half, and, perhaps, the better half of its titles to regard. While thus differing from the views conveyed by Mr. Hall's observations, Mr. Chamberlain could not, however, but be sensible of the flattering—the too flattering—manner in which some of these observations had referred to his own knowledge of Japanese literature.

The President observed that whatever might be the poetical merits of Japanese verse, he presumed that the early writings, whether in prose or metre, would be found to possess the special value which attaches to all old literature, that of throwing light on past history and ancient manners and customs, and also of shewing how the language was gradually formed and developed. The Book of Odes and other Classics of China were particularly valuable in these respects, proving, as they did, the high degree of civilization to which that country had attained at a very early date. The tale of the 'Maiden of Unahi' gives us an interesting insight into social life in Japan about a thousand years ago; it treats of the 'old, old story' of love, and shows that the wooing of those days was conducted with a degree of delicacy, fervour and romance, which did credit, he thought, to the Japanese of that age. The curious fancy of the rival lovers not fighting with each other while living, as would probably have been the case elsewhere, but reserving their combat for the grave where they could only disturb their own shades, indicates, perhaps, the respect then felt for the King's peace. The circumstance of the people dwelling in houses raised on platforms built out into the river Ikuta was illustrative of the architecture of those days, and the description of that stream—now wholly choked up and almost obliterated—showed how greatly it had changed since the time of the tale. The burial ceremonies referred to were also instructive; they showed that cremation was not then practised, and that the custom of burying weapons, clothing, etc., with the deceased, was then observed. It would be most interesting to trace the early burial rites of Japan from the time of human sacrifice referred to by Mr. Satow, to the subsequent adoption of clay images, and of paper imitations of articles of use which are still burnt at the grave or placed in coffins in China at this day. Clay images are now found in old tombs in the neighbourhood of Nara and elsewhere. These few points serve to show how much may be learned from tales of this kind, but the purity of the diction of the story of the 'Maiden of Unahi' seemed to him to be its chief charm. He thanked Mr. Chamberlain for having furnished the Society with such an interesting specimen of the early literature of Japan, and trusted that the difficulties and the labour which attend research in this unexplored field would not deter him from continuing a study which promises much good result.

At the conclusion of the meeting, Mr. Chamberlain begged to bring before the notice of the Society a work by the Revd. John Ross, of Newchwang, entitled "Corean Primer"—the first book, so far as he knew, published by a European in the Corean type. He stated that Mr. Ross had sent him some copies for sale in Japan, and that the price was $2 per copy.

The steamer *Anadyr* took about eighteen of the staff of mechanics who are proceeding to Paris to erect on the Exhibition grounds a Chinese official reception room, or pavilion, and two Pagodas, which will be each forty feet high. These have all been constructed in Ningpo under the direction of Sung-sing-kung. As many as 400 men have been employed for some months on the buildings, and it is supposed that their handiwork will elicit considerable commendation in France, as the buildings themselves are on a scale of some magnitude.—*S. C. & C. Gazette.*

Law Reports.

IN H. B. M.'s PROVINCIAL COURT, KANAGAWA.

Before H. S. WILKINSON, Esq., Acting Law Secretary.

Thursday, December 13th, 1877.

FUKUZAWA KOJIRO *vs.* THOMAS ROSE.

(Adjourned from the 6th inst.)

This was a claim for $488,80, with $1,000.00, damages; altogether $1,488.00.

The plaintiff stated in his petition that in July, 1877, he received an order from the Mining Department for 144 steel hammers; he contracted for them with defendant and deposited $50 00 as bargain money. The hammers were made, paid for, and delivered to the Department, but all with the exception of two proved to be made of iron, only coated with steel. They were consequently rejected, and the plaintiff suffered severe loss.

Defendant's answer was that he never contracted with this plaintiff. He had made a contract with one Kinekuneja Mitsujiro about 144 hammers; he had made them all with the exception of two, which he had imported. The hammers were made in the usual way, the poll of iron and the face of case steel, or what is known in the trade as cast steel hammers.

The plaintiff and defendant both appeared personally.

Mr George Whitfield, civil engineer, of No. 69, Yokohama, produced his survey report, which was read as follows:—

"FUKUZAWA KOJIRO *vs.* THOMAS ROSE.

"Yokohama, Dec. 11, 1877.

"SIR,—In accordance with your instruction, I have surveyed all the hammers made by the defendant in the above suit, and have subjected two of them, as well as the sample hammer, to minute examination. The sample hammer, marked "Matheson cast steel." I have proved to be steel throughout by its hardening on being plunged in water when at a red heat. When subjected to the same test, the two selected hammers did not harden even on the faces, and I had them split in two, to examine by the fracture the quality of the materials employed in their construction. I find that they are made of wrought iron faced with steel, and I find that the steel used for the faces is only § inch thick and of inferior quality, probably spring steel.

I have no hesitation in saying that none of the hammers are equal to the sample hammer, marked "Matheson cast steel," and that they are totally unfit for any purpose, for which that hammer would be appropriate, and on account of the thinness of the facing and the inferiority of the steel used in the two that I have split, I must pronounce them to be not "good, serviceable hammers" though some may be that much better than those tested as just to bring them within the definition of "good, serviceable hammers."

"I remain, Sir,

"Your very obedient Servant,

"GEORGE WHITFIELD.

"To the Registrar of H. B. M.'s Court at Kanagawa."

To defendant: The two hammers, which I tested, I do not consider fit for any purpose whatever. It is not so much the work as the material used that makes the hammers worthless. There is a kind of steel, called blister steel, that is commonly used for facing hammers; there is another kind of steel, commonly used for springs. You have used spring steel for facing your hammers, instead of blister steel.

Defendant: I beg to deny that.

This closed the case, and His Honour delivered the following:—

JUDGMENT.

After the evidence of Mr. Whitfield, I have no doubt that the hammers were not of the quality which the defendant contracted to supply. The plaintiff has not accepted them nor (considering that he ordered them for the use of the Mining Department, and that it was necessary that they should be tested by the Mining Department) do I consider the delivery of the hammers to that department anything more than was necessary in order to have a proper examination of the bulk. The plaintiff is therefore entitled to recover the price he has paid for them. But there is no evidence to entitle to him any special damages. Judgment will therefore be for the plaintiff in the sum of $488, but in order to do justice to all parties, and in view of the fact that defendant offered before trial to do all that the plaintiff had proved himself entitled to, the order will be that defendant do pay the said sum of $488 into the Registry of the Court within ten days from this date, and that notice thereof be forthwith given to the plaintiff, through the Kencho, and that the plaintiff, on returning to defendant the 139 hammers, still in the plaintiff's possessions, within ten days after the delivery of such notice to the Kencho, be at liberty to take the said sum of $488 out of Court; but that if the said hammers are not so returned within ten days after the delivery of such notice as aforesaid, the defendant shall be at liberty to move to have the judgment entered for the defendant. There will be no costs.

IN THE JUDICIAL COURT OF KANAGAWA.

Before Mr ASAINA KANSUI, Vice-President.

Tuesday, December 11, 1877.

WHITFIELD and DOWSON *vs.* TAJIMA KIYEMON.

(Adjourned from the 11th October.)

This was a claim of $870.48, balance of account. On the 5th September 1876 plaintiffs handed to the defendant 200 saws of English make but Japanese pattern, with the understanding that defendant should pay plaintiffs $4.50 for every saw sold by him. Defendant expressed his expectation to sell half the saws by the end of December, and the other half by the end of February, 1877, and it was arranged that until he had paid for 100 saws he should pay to the plaintiffs, as interest, the sum of $20 per month, and after the sale of the first hundred, and until the balance was sold, $10 per month. Defendant paid the interest as agreed up till the end fo March last, when the plaintiffs consented to the interest being reduced to one half, or $10 per month. At last plaintiffs, seeing that no saws were sold, demanded their return. when the defendant said that he had distributed them among workmen in the country, and would bring the money as soon as he was paid by his customers. Later on the defendant has, however, confessed to plaintiffs that he pawned 100 saws to a pawnbroker named Sakaiya, in Kanagawa, for 200 *yen*, and spent the money. The plaintiffs now demanded that the defendant be ordered to return the 100 saws pawned to Sakaiya, and as many of the remaining 100 as are in his possession, and further pay to plaintiffs $478.48 with interest from the 1st ultimo until date of payment, less $4.50 for each saw returned in good condition.

Defendant in his answer admitted the amount claimed, but denied malversation, stating that he had bought the saws in question, and had paid interest on the purchase sum. He added that he had now become a bankrupt, and demanded that plaintiffs' claim be included in the schedule of the rest of his liabilities.

For plaintiffs appeared Mr George Whitfield, the defendant appeared personally.

Before the proceedings commenced, the judge, observing that Mr Whitfield and his book-keeper, Mr Dallas, kept on their overcoats, ordered them to doff those garments. As the court room was extremely cold, having several window-panes broken and no other fire than a diminutive *hibashi* under the judge's chair, these gentlemen protested that they had intended no want of respect, but they were informed that it was against the rules of the Court to appear before it in an overcoat, and the order was insisted upon and obeyed.

Defendant was then examined, and, this done, the judge informed the plaintiff that if he, as stated in his petition, considered the defendant guilty of fraud, the case would have to be treated as a criminal one; otherwise judgment would be given as in a civil case.

The plaintiffs elected to prosecute criminally, and judgment in the civil case was reserved, until the criminal case shall have been decided.

MR. BRYCE'S ASCENT OF MOUNT ARARAT.

(Spectator.)

From the plain of the Araxes, where the Armenians place the lost Paradise of man, rises an extinct volcano, of immeasurable antiquity, its peak, 17,000 feet high, soaring suddenly from the platform, which is but two or three thousand feet above the sea; its snow-line at the elevation of 14,000 feet, treeless, waterless, solemn, and solitary, one of the sublimest objects on the face of the earth. It is Ararat, the mountain of the Ark, the ancient sanctuary of the Armenian faith, the centre of the once famous kingdom, now the corner-stone of three great empires. "On the top of its lower peak, Little Ararat, the dominions of the Czar, the Sultan, and the Shah, the territories of the three chief forms of faith that possess Western and Northern Asia, converge to a point. When in 1828 the Czar Nicholas defeated the Persians and annexed the territory round Erivan, his advisers insisted on bringing Ararat within the Russian territory, on account of the veneration wherewith it is regarded by all the surrounding races, and which is reflected on the Sovereign who possesses it." No mountain save Sinai has such sacred associations, and Sinai itself has less of legendary lore attached to it. Persians, Tartars, Turks, and Kurds regard the mountain with reverence as genuine as that of the Christian races, for its majesty, its solitariness, and because they all believe in the Deluge and in the Patriarch, "faithful found." They are all equally persuaded that "Massis" is "inaccessible;" they are not to be convinced by any testimony, not that of Parrot, of Aftonomof, or of Abich—who respectively ascended Ararat in 1829, 1834, and 1845—of General Chouzk and his party, and the Englishmen who ascended in 1856; and it now appears that they reject that of Mr. Bryce, who performed, in September of last year, the extraordinary feat of ascending the mountain of the Ark, alone.

The narrative of Mr. Bryce's ascent fills one with wonder and delight, fires one's imagination like an astronomic discovery, and communicates to one something of the thrill and awe of the loneliness and immutability of the scene on which the solitary man gazed, when he stood on the little plain of snow which forms the summit of Ararat, "with a vividly-bright green sky above it, and a wild west wind whistling across it, clouds girding it in, and ever and anon through the clouds glimpses of far-stretching valleys and mountains away to the world's end." It was only from dawn till dark, but an immeasurable experience, one of those which seem to free the spirit from bonds of time and space, lay between those boundaries, for him who left on the plain and on the lower slopes

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

of the mountain scenes such as they had witnessed from immemorial time, the nomad Kurds "watering their flocks at the spring, pitching their goat's-hair tents in the recesses of the lonely rocks, chanting their wildly pathetic airs, with neither a past to remember nor a future to plan for,"—and who climbed, with body and mind strained to the utmost pitch of exertion and excitement, to that platform of eternal snow, to stand, a feeble, solitary, exulting, cowering atom in the vastness between the cloud-veil of Ararat and the light-flooded sky.

Mr. Bryce had set out on the ascent from Aralykh, with a companion and an escort of six armed Cossacks, accompanied by an interpreter; but the Cossacks failed them early in the undertaking, having no notion of the importance of time, no notion of carrying baggage, and a propensity, perfectly good-humoured, but ruinous to the purpose of the expedition, to sit still, smoke, and chatter. The interpreter was obliged to abandon the party at Sardarbulah, or "the Governor's Well," the only high permanent camping-ground on the mountain, and the one spot in all the landscape where there are trees. With their companions the travellers had thenceforth no means of communication, and they were at their mercy completely, yet they felt no fear of them, and incurred no danger from either Kurds or Cossacks, only after a certain point both became equally useless as guides, for the former never go higher on the mountain than the limits of pasture, and the latter have no motive to go nearly so high. When they had reached a height of 12,000 feet, and everything lay below them, except Little Ararat opposite, and the stupendous cone that rose from where the friends were sitting, its glittering snows and stern black crags of lava standing up perfectly clear in a sea of cloudless blue; when they had noted the landmarks carefully, and agreed to meet about nightfall at that spot, having a notion that the Cossacks, who were now widely scattered about the slope, would at least bring them safely down into the plain, the travellers parted, and Mr. Bryce commenced his solitary ascent of the awful peak, held by the Armenians to be guarded by angels from the profaning foot of man, and by the Kurds to be the haunt of Jinn who take vengeance on mere human disturbers of their devil's revelry. At eight o'clock he started, carrying with him his ice-axe, some crusts of bread, a lemon, a small flask of cold tea, four hard-boiled eggs, a few meat lozenges, on the perilous journey, whose dangers were of that most formidable kind, the unknown, and climbing away to the left along the top of a ridge, came to a snow-bed, lying over loose, broken stones and sand, so fatiguing to cross that he almost gave in on the far side of it. There he found solid rock, however, and the summit of Little Ararat began to sink, and that meant real progress. At ten o'clock he was looking down upon its small flat top, studded with lumps of rock, but bearing no trace of a crater. Up to this point one Cossack and one Kurd had accompanied him—they were mightily amused by the ice-axe, and curious as to its use—but the Kurd stopped now, shivering on the verge of a long, treacherous snow-slope, in which steps had to be cut; and afterwards the Cossack, who had crossed the snow-slope, looked up at the broken cliff above them which had then to be scaled, and shook his head. Mr. Bryce made him understand by pantomime that he was to return to the bivouac below, bade him farewell, and set his face to the great peak, Little Ararat now lying 1,000 feet below the eye. He climbed the crags which had appalled the Cossack, and emerged on a straight slope of volcanic stones, which rolled about so that he slipped down nearly as much as he went up; and here the breathlessness and fatigue became extreme, owing to the thinness of the air "the practical question was whether, with knees of lead, and gasping like a fish in a boat, he would be able to get any farther." There was no rashness in Mr. Bryce's great courage. He sat down, ate an egg, and resolved that when three o'clock should come, or he should come to a "bad place," he would turn back, let the summit be ever so near. And as there is no more brag about his story than there was rashness in his courage, he says simply that such was the exhaustion of his legs and his lungs, the bad place or three o'clock would have been almost welcome.

Going on again, he turned and got on another rock-rib, working his laborious way over toppling crags of lava, until perhaps the grandest sight of the whole mountain presented itself. At his foot was a deep, narrow, impassable gully, in whose bottom snow lay, where the inclination was not too steep. Beyond it a line of rocky towers, red, grim, and terrible, ran right up towards the summit, its upper end lost in the clouds, through which, as at intervals they broke or shifted, one could descry, far, far above, a wilderness of snow. Had a Kurd ever travelled so far, he might have taken this for the Palace of the Jinn. Then came the struggle between the imagination, longing to feast itself upon the majesty and the wonder of the scene, and the exigencies of the tremendous task of the ascent; Mr. Bryce found that the strain on the observing senses seemed too great for fancy or emotion to have any scope. This was a race against time, in which he could only scan the cliffs for a route, refer constantly to his watch, husband his strength by morsels of food taken at frequent intervals, and endeavour to conceive how a particular block or bit of slope would look when seen the other way in descending. Climbing on and on, sometimes erecting little piles of stones to mark the way, like Poucet without his brothers; so absorbed that the solemn grandeur of the scenery impressed him less than on many less striking mountains, the solitary traveller consumed the precious hours until he found himself at the top of the rock-rib, and on the edge of a precipice, which stopped farther progress in that direction, but showed him, through the clouds which floated around him—real clouds, not generally diffused mist—the summit barely 1,000 feet above him. To accomplish that distance, he had to choose between two courses, both almost impracticable; the first was to return to the long slopes of rolling stones which he had deserted, get up the cliffs at the top, and so on to the upper slopes of rock or inclined snow which lead to the summit. This involved a renewal of the terrible labour he had already found almost unendurable. The second was to turn back and descend into a vast snow-basin, lying south-east of the summit, and whose north-west acclivity formed, in fact, its side; which was so steep as to require step-cutting, and a "likely place for crevasses." The hours were wearing on; a night upon the mountain would probably mean death to the brave man (whose clothing was insufficient even for the day-time, for his overcoat had been stolen on a Russian railway); the decision had to be quickly taken. He decided for the snow-basin, retraced his steps from the precipice, climbed into the basin along the border of a treacherous ice-slope, and attacked the friable rocks, so rotten that neither feet nor hands could get firm hold floundering pitiably, because too tired for a rush. All the way up this rock-slope, where the strong sulphureous smell led Mr. Bryce to hope he should find some trace of an eruptive vent, it was so "delightfully volcanic," but where he only found lumps of minerals and a piece of gypsum with fine crystals, he was constantly gazing at the upper end of the toilsome road for signs of crags or snow-fields above. But a soft mist-curtain hung there, where the snow seemed to begin, and who could tell what lay beyond? The solitude must indeed have been awful then, for everything like certainty and calculation had ceased. From the tremendous height, Little Ararat, lying he did not know how many thousands of feet beneath him, looked to the climber like a broken obelisk. And he could only imagine the plain, a misty, dreamlike expanse below. Did he dare to think of the human life, of the peaceful tents, the cheerful fires, the voices away there in the depths of distance, as he stood alone amid the eternal snow, with mists to the left and above him, and a range of black precipices which shut in the view upon the right, and just below him clouds seething like waves about the savage pinnacles, the towers of the palace of the Jinn, past which his upward path had lain. Only one hour was before him now; at its end he must turn back,—if, indeed, his strength could hold out for that other hour. He struggled on up the crumbling rocks, now to the right, now to the left, as the foothold looked a little firmer on either side, until suddenly the rock-slope came to an end, and he stepped out upon the almost level snow at the top of it into the clouds, into the teeth of the strong west wind, into cold so great that an icicle enveloped the lower half of his face at once, and did not melt until four hours afterwards. He tightened-in his loose light coat with a Spanish neck-scarf, and walked straight on over the snow, following the rise, seeing only about thirty yards ahead of him, in the thick mist. Time was flying; if the invisible summit of the Mountain of the Ark were indeed far off now, if this gentle rise stretched on and on, that summit must remain unseen by him who had dared and done so great a feat that he might look from its sacred eminence. He trailed the point of the ice-axe in the soft snow, to mark the backward track, for there was no longer any landmark, all was cloud on every side. Suddenly he felt with amazement that the ground was falling away to the north, and he stood still. A puff of the west wind drove away the mists on the opposite side to that by which he had come, and his eyes rested on the Paradise plain, at an abysmal depth below. The solitary traveller stood on the top of Mount Ararat, with the history of the world spread beneath his gaze, and all around him a scene which reduced that history to pigmy proportions, and man himself to infinite littleness.

Mr. Bryce has given to the world a wonderful word-picture of that amazing and awful spectacle, of that "landscape which is now

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

what it was before man crept forth on the earth, the mountains which stand about the valleys as they stood when the volcanic fires that piled them up were long ago extinguished;" but he could not tell us what were his thoughts, his feelings there, what the awe and yearning that came over him in that tremendous solitude, where "Nature sits enthroned, serenely calm, and speaks to her children only in the storm and earthquake that level their dwellings in the dust." His vision ranged over the vast expanse, within whose bounds are the chain of the Caucasus, dimly made out, but Kazbek, Elbrus, and the mountains of Daghestan visible, with the line of the Caspian Sea upon the horizon; to the north, the huge extinct volcano of Ala Göz, whose three peaks enclose a snow-patched crater, the dim plain of Erivan, with the silver river winding through it; westward, the Taurus ranges; and north-west, the upper valley of the Araxes, to be traced as far as Ani, the ancient capital of the Armenian kingdom; the great Russian fortress of Alexandropol, and the hill where Kars stands,—peaceful enough when the brave climber looked out upon this wonderful spectacle. While it was growing upon him, not indeed in magnifience, but in comprehensibility, "while the eye was still unsatisfied with gazing," the mist-curtain dropped, enfolded him and shut him up alone with the awful mountain-top. "The awe that fell upon me," he says, "with the sense of utter loneliness, made time pass unnoticed, and I might have lingered long in a sort of dream, had not the piercing cold that thrilled through every limb recalled me to a sense of the risks delay might involve." Only four hours of daylight remained, the thick mist was an added danger, the ice-axe marks were his only guide, for the compass is useless on a volcanic mountain like Ararat, with iron in the rocks. The descent was made in safety, but by the time Mr. Bryce came in sight of the spot, yet far off, where his friend had halted, "the sun had got behind the south-western ridge of the mountain, and his gigantic shadow had fallen across the great Araxes plain below; while the red mountains of Media, far to the south-east, still glowed redder than ever, then turned swiftly to a splendid purple in the dying light." At six o'clock he reached the bivouac, and rejoined his friend, who must have looked with strange feelings into the eyes which had looked upon such wondrous sights since sunrise. Three days later, Mr. Bryce was at the Armenian monastery of Etchmiadzin, near the northern foot of Ararat, and was presented to the archimandrite who rules the house. "This Englishman," said the Armenian gentleman who was acting as interpreter, "says he has ascended to the top of Massis" (Ararat). The venerable man smiled sweetly, and replied with gentle decisiveness, "That cannot be. No one has ever been there. It is impossible."

THE HOTEL OF THE FOUR WINDS.

(The World.)

Every wind brought customers to Madame Dijon. They came from Upsala in the North, from Melbourne and Sydney in the South, from Canton in the East, and from many other places in the West; but all with the lightest of purses. Madame's establishment was the international hotel of impecuniousity. The bulk of her customers, however, hailed from under the star-spangled banner; and hence her hotel, in the streets of the Four Winds by the Luxembourg Gardens, was specially adapted to American manners and customs, and could boast hominy, beans and bacon, and, I think, griddle-cakes, and other national aids to indigestion, in its bill of fare. On *fête*-days Madame Dijon would gratify her guests by hanging out the stars and stripes. "Chantez moi le Yankee Doodle, Monsieur Ulysse," would she say to Mr. Ulysses Slap from Ohio, when that sallow citizen looked sad. Thus she kept the national *fêtes* of Yankeedom, and punctually professed enthusiasm about American independence in July; for on these occasions her guests made a wild leap from her *petit bleu* to her Ay Mousseux, a dreadful compromise between champagne and eau de seltz.

It was a wonderful hotel to which the four winds blew guests. They came trooping across the long yard under our windows twice a day—at noon and at six in the evening—on their way to the shambling, noisy, steaming *salle-à-manger*. They were boarded by the week or month at the rate of a trifle over half a crown per diem; and for this they had a breakfast of two *plats* and a dessert, and a dinner of soup, salad, three *plats* and a dessert. Bread was at their absolute discretion and they could have a little *carafe* of wine for five sous. 'This is very blue to-day,' said Monsieur Ulysse one morning to Madame Dijon, holding up his glass to the light; and the brisk little body retorted, 'It will recall to you, Monsieur Ulysse, the *beaux cieux* of your great country.' Ulysses laughed and drank: Sometimes we were startled with a furious beating of knife and fork handles upon the tables of the *salle-à-manger*. Madame Dijon had gratified her guests with a national dish. Sometimes resounding cheers told us that it was a popular guest's birthday, and that Madame Dijon's Ay Mousseux at four francs was being uncorked. Sometimes two or three American medical students had invited a few friends from the Ecole de Médecine with their *étudiantes*. These hospitalities generally happened on Sunday morning, the ladies being at leisure. They were hard-working needle-women, flower makers, boot-closers, and getters-up of fine linen. The *étudiante* who was temporarily devoted to Monsieur Ulysse made roses, and only roses, from the beginning to the end of every year; while her friend, who was mated to a Prix de Rome, was a daisy-hand. They worked very hard, lived in heated rooms, ate very frugally; but they laughed and sang and danced through their Sundays, and sometimes through their Mondays; and they wore exquisite linen and pretty dresses, neither loud nor aping those of their betters; and, their holiday spent with their lords, they returned demurely, patiently, contentedly—Laure to her roses, Berthe to her daisies. Madame Dijon cleared her *salle-à-manger* after the dance and the supper of *galette* and wine, and admonished her students that they must be very quiet for some time to come, or her respectable lodgers would give her warning.

The respectable lodgers at the Four Winds were a humdrum set of people, such as you might find in any economical *bourgeois* quarters on the left bank of the Seine. The first floor was occupied by a young French *ménage*, the head of which had just lost half his wife's *dot* on the Bourse. They were economising, and hiding away from their rich acquaintance. On the same floor was an English family, bent on an economical life. On the second floor was an artist who had become *rangé*, having been admitted to the Salon and been spoken of by Théophile Gautier, and who, on the strength of these honours, had married a modest little body, from his *pays*, with fortune enough to furnish their rooms, and buy the *pot-au-feu*. Opposite them, on the same flat, were three young ladies, who were feather-dressers by trade—a business that appeared to involve many calls from young gentlemen—*courtiers* in feathers, we presumed—and late hours. These ladies' hearts seemed to be as light as their plumes; some said that their morals were as fragile. This Madame Dijon indignantly denied; but then madame's ideas were not severe in this particular.

Every morning, betimes, we remarked an old lady in a dingy dressing-robe, and with black lace tied over her head, drawing water in a bucket in the courtyard. She was as wrinkled as any old gipsy, and her hands were dried until they looked like claws. Glancing at her you would have taken her to be an old gentleman's nurse, or even a *femme à tout faire*. But on a close inspection, and after marking the respect with which the *concierge* and others in the hotel addressed her, it became plain that she was not accustomed to draw water in the courtyard.

Madame de Grandsire was a marquise, and of an old *souche*. The widow of the Marquis de Grandsire, who had figured at the court of Charles X., and a daughter of the ancient Breton house of De Fortenbras, she took the punishment of the world with a brave light heart. She had married Hector de Grandsire on emerging from the Sacré Cœur, and had passed direct from the quiet of a convent to the bustle and glitter of a court. Her *dot* was one becoming a De Fortenbras. In her marriage *corbeille* lay all the sumptuous fripperies proper to her rank, and to the position of her husband. That bit of lace tied coquettishly about her wrinkled face was a *chiffon* saved from the *corbeille*, and it comforted her as she carried the bucket of water to the third floor of a house in which, in her youth, she would not have put her foot, save on one of her rounds of charity. But the sharp pinch of misfortune had brought her to be a dweller—and of the humblest rank—in the hostelry of the impecunious. She had graced her husband's *salons* under the Bourbons, and she graced her *mansarde* under the Empire. She never complained, nor moped, nor sighed for the old times; but with a stately curtsy accepted what the gods provided, and felt herself as much the marquise with a bucket as an ostrich fan. She lived with her daughter, who gave music-lessons, who never forgot that she was a De Grandsire, and who looked down with infinite disdain on the *bourgeois* families who employed her. We became, very gradually, intimate with the marquise and her daughter; and they presented to us such a picture of dignity under all the lowering influences of poverty as our own great army of beggars on horseback might study with advantage.

Such a *ménage* as that which the Marquise de Grandsire set up in the third flood of the Hotel of the Four Winds could not be managed in England. Society would have had nothing to do with it. Our *nouveaux riches*, who are getting the upper hand everywhere, would

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

laugh it to scorn. But see how the sometime gentlewoman of Charles X.'s court showed herself superior to fortune.

The Marquis, her husband, had dissipated his wife's fortune and his own when he embarked for America on some new speculation, leaving wife and child dependent on relatives. He was never heard of afterwards. The pittance on which the Marquise and her daughter were compelled by the niggardliness of their kindred to live did not certainly exceed two thousand francs, that is eighty pounds, a year. Madame not only lived on this, but she managed to go out into the world, appear at quiet *soirées*, and even receive her intimate friends. The lady who filled the bucket in the courtyard in the morning swept her own rooms, cooked her own dinner, and made her own bed. She cast off the shabby dressing-gown in the afternoon, had her hair dressed by her daughter, and, wrapped in her lace and furs (a French woman who once possesses these things never parts with them), went gaily forth to pay visits in the afternoon, or to spend a gay evening, among her equals. In their sight and in her own, her poverty did not derogate from her dignity.

Madame was so rigid an economist that nothing would persuade her to exceed the sum allotted for each day's wants. A little coffee, some eggs, a *bouillon*, a herring, an *orgeat* on cold nights—these were the simple elements of the daily fare of the two ladies. Their heads covered with warm *capuchons*, and cosy in the furs of their days of splendour, they walked to and from their balls and routs on winter nights, and we could hear their laughter as they went upstairs in the small hours to their third floor.

'Je n'ai pas encore organisé ma toilette d'hiver.' said Madame de Grandsire, sitting in state in her poor little *salon*, to a visitor who was pressing her to accept an invitation.

The organisation was one that required skilful fingers and an inventive head. Mademoiselle was in the simplest robes, and she had aunts who made her presents, but Madame had to rely entirely on her own resources. 'People don't make presents to an old woman of sixty,' she would say, with a laugh, as she went over her lace for the fiftieth time, and took counsel on the possibility of adapting it to the fashion of the day. 'With good lace one is always dressed,' was a motto of hers. While poverty had left the dignity of the Grandsire ladies intact, it had hardened their pride. They shrank with horror from any favour or service that appeared to indicate a knowledge of their straits. Madame de Grandsire never thoroughly forgave Madame Dijon for having, one Christmas morning, begged the Marquise and her daughter to accept some beef and plum-pudding, which she had prepared for her English and American customers. The old lady, who dined that day on a herring and an egg, shook with anger when she described to us the liberty which had been taken with her.

Madame de Grandsire was a puzzle to Mr. Ulysses Slap of Ohio, when he saw her, as he crossed the hotel-yard to his breakfast, busy at the pump. The old *concierge* touched his hat to her; the feather-dressers, passing out with their work, respectfully wished her good-morning; the postman, saluting her, handed her a letter with a coronet upon it. And yet she looked like a woman who had not a cent in the world! A Marquise in that fig! It was a most excellent joke to Mr. Ulysses Slap.

And Monsieur Ulysse was to Madame de Grandsire one of those rude young boarders whose gross manners Madame Dijon tolerated because it was her *métier* to feed them. Had Madame de Grandsire ever come in with Monsieur Ulysse while she was drawing water in her old dressing-gown, and with what hair she had in curl-papers, she would have retorted upon his swagger with the phrase of her old friend M. Guizot (whom she had received more than once at her table), that he could never rise to the height of her disdain.

Mr. Slap laughed outright when Laure the rose-maker told him that the old lady was a *grande dame*, and that it was not *gentil* on his part to poke fun at her. His American friends laughed with him at the bare idea of human dignity without a'mighty dollars, of rank without the 'fixings.' And they never could be persuaded to regard Madame de Grandsire in any other light than 'the old woman who fills her bucket every morning in the courtyard.' Madame Dijon protested that Monsieur Ulysse and his friends were *des bons enfans*, but Madame de Grandsire insisted that they were *des mals élèvés*; and so the two ladies parted. The Marquise went away, and died in an attic in the Faubourg St. Honoré, nearly opposite Lord Lyons's kitchen windows; and lately the papers had a touching account of the funeral of poor Madame Dijon, at which many of her grateful boarders attended. For she was good to the stranger in difficulties, and patient to her own hurt towards the student who could not pay his bill.

REUTER'S TELEGRAMS.

LONDON, December 12th, 1877.

THE WAR.

Despatches report that Osman Pacha attempted from Plevna to break through the Russian forces and make for the direction of Widdin, but was unsuccessful in his efforts.

The struggle was most heroic, and the Turks only capitulated after great slaughter had resulted.

The Russians captured forty thousand prisoners besides twenty thousand sick. The garrison in Plevna at time of capitulation were dying of cold and hunger.

It is semi officially stated that Russia will continue to prosecute the War.

LONDON, December 10th, 1877.

THE WAR.

Despatches report that after severe fighting on the 9th December, Plevna surrendered unconditionally. Osman Pacha was wounded.

LONDON, December 9th, 1877.

THE WAR.

Despatches report that the Turkish troops attacked the Russian forces at Rahowitza, but were compelled to fall back.

The Russians have captured Stataritza turning the Turkish right wing.

The Russian Press proposes the following as conditions of Peace:—

Independence of the Principalities.

The cession of Batoum and Kars.

Free passage of the Dardanelles.

FRANCE.

Mounsieur Dufaure has relinquished his mission of forming a new Cabinet, and Mounsieur Batbie has been summoned by the President to form a new Ministry.

LONDON, December 9th, 1877.

THE WAR.

Despatches report the Russian loss up to the 17th November, as estimated at 74,858 men.

According to unofficial Turkish accounts, Plevna is amply provisioned.

A fresh Russian attack made on Plevna has been repulsed.

FRANCE.

The Republican leaders disavow any negotiations with Monsieur Dufaure, in consequence of which a serious crisis is apprehended.

LONDON, December 8th, 1877.

THE WAR.

The Capture of Elena by the Turkish Troops frees Hainboghaz and the Slivno Passes?

A Russian attack is expected to be made on the forces of Suleiman Pasha, who with a Turkish Army corps is advancing on Tirnova.

The Turks have occupied Popkoi and Keerova?

FRANCE.

Monsieur Dufour has undertaken to form a new Ministry.

London, 30th Nov., 1877.

Lord Derby has stated that he differs from the prevalent opinion that the Euphrates Valley is the true route to India, and that he sees no reason for the British Government to depart from its policy of neutrality, but that meditation will be employed if occasion offers.

ARRIVAL OF THE ENGLISH MAIL.

TELEGRAMS.

Villapurum, 4th November.—The Pennar river has overflowed its banks. The line between 102 to 107 miles, is breached in several places. Passengers, luggage, and parcels cannot be booked from the north beyond Villapurum, from Punrutty. The interruption is likely to last a week at least.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Negapatam, 5th Nov.—There was heavy rain again last night. The line breached at miles 112 and 157. The line must be closed against the public use between Vyampetty and Ayalore for a week from to-day, to enable the Engineers to repair the breaches.

London, 15th November.—Advices from Constantinople state that the relations between Turkey and Servia are in a most critical condition, and that war between the two countries is regarded as imminent.

London 10th Nov.—At the Lord Mayor's Banquet last night, at the Guildhall, the Earl of Beaconsfield, in returning thanks for the toast of Her Majesty's Ministers alluded to the splendid example of national sympathy displayed by the people of England in coming forward as they had done to the relief of the sufferers by the famine in Southern India. With reference to the Eastern Question, he said that England had never swerved for one moment from her policy of conditional neutrality, and that neither the honour nor interests of England required us to engage in the contest now raging; our neutrality must, however, cease if British interests are assailed. Events have shown that the independence of the Ottoman Empire is indisputable. The noble Earl, in conclusion, counselled patience, and said he hoped soon that England, in concert with other Powers, would be able to secure the peace and independence of Europe.

ARRIVAL OF THE FRENCH MAIL.

TELEGRAMS.

Madras, Oct. 23.—It is believed here that Mr. John Bright's and Lord Salisbury's remarks portend great changes in the Indian Army, including the abolition of the Madras, and Bombay Commander-in-Chiefships, Adjutant and Quartermaster Generalships, and the Military Secretaryships of the Government. It has transpired that Sir Neville Chamberlain is maturing the scheme for hastening the retirement of the veteran Madras sepoys. It is supposed that our forty infantry regiments, now of doubtful efficiency and much under officered, will be converted into twenty regiments fully officered and with picked men. Nothing is yet known regarding the reduction of the European regiments in Madras.

Calcutta, Oct. 29.—The Jowakis, on the night of the 25th, attacked the guard of the 22nd Regiment over the Commissariat Stores at Shahkot near Cherat, killed a Havildar and five men, and wounded six. The Jowakis left one man dead.

Bombay, Nov. 1.—At two this morning, the premises of Messrs Thacker and Co., late Thacker, Vining and Co., the eminent publishers, were discovered to be on fire. The fire burned till five and the building was completely gutted. Nothing was saved but the account books. Nothing was insured. The loss is reckoned rather under a lakh.

Sir R. Temple arrived in Bombay this morning.

Simla, Nov. 3.—The supplement to the *Gazette* of India to-day, contains a notice prohibiting the publication of lotteries and race sweeps. Local Governments and administrations are requested to see the orders of Government carried out.

London, Nov. 5.—Sir Bartle Frere, Governor of Cape Colony, has issued a proclamation, deposing Kreli, a Kaffir Chief, and annexing his territory, called Kauskei, to the British Empire.

The latest advices from Armenia state a heavy snow fall has prevented the Russians at Olti from marching to turn Erzeroum.

London, Nov. 6.—The stormy weather which has set in is checking the advance of the Russian army of Dobrudscha on Silistria. The Turks have been strongly reinforced at Orchanie. The latest advices from the seat of war in Armenia state that the Russians have commenced the siege of Kars. The *Daily Telegraph* states that the Russians on the 6th (?) instant made an attack along their whole line on the Turkish positions before Deviboyun, where Ghazi Ahmed Mukhtar is strongly entrenched, and that the Turkish centre was broken and compelled to retreat. During the engagement, which lasted over ten hours, Ahmed Mukhtar was slightly wounded. Rumours which have been current lately of foreign mediation in the Russo-Turkish war have been authoritatively denied.

London, Nov 7.—The *Morning Post* states that the Turks have abandoned and the Russian occupied Erzeroum, and that the Turks are retreating on Erzinghan and Trebizond.

The United States House of Representatives has adopted free coinage, a standard silver dollar, making the same a legal tender. The Mansion House Famine Relief Fund is closed. It amounts to £446,000.

Paris, Nov. 7.—There is a rumour of a conspiracy in Constantinople, which has been discovered, and arrests made.

London, Nov. 8.—A Russian official despatch states that General Tergukasow on the 4th instant defeated the combined forces of Ghazi Ahmed Mukhtar and Ismail Pasha at Deviboyun. After nine hours continuous fighting, the Turkish troops retreated in disorder.

London, Nov. 8.—Ghazi Ahmed Mukhtar has sent a despatch in which he admits the engagement at Deviboyun on the 5th instant, and states that the Turks subsequently retreated to Erzeroum. The Russian official despatch states that the Russians have captured one hundred waggons and carried off a large number of cattle from the Turks at Ivratza, north of Orchanie. General Skobeloff telegraphs that on the 5th instant, he approached the Turkish positions to the south of Plevna and cannonaded them. The Russian army corps in the Dobrudscha, commanded by General Zimmermann, is apparently settling into winter quarters at Kustendjie.

A German telegraph clerk has been murdered near Adrianople, and the German Ambassador at Constantinople has instructed the Porte to enquire into the matter.

London, Nov. 9.—Ghazi Ahmed Mukhtar describes the fighting on the 5th instant as an attack on his right wing, which was repulsed, but that his centre succumbed to the Russian attack. Ghazi Ahmed Mukhtar is fortifying his positions around Erzeroum.

DOUBLE ACROSTIC.

My first's a voice that's harsh and out of time,
My second hails from a much warmer clime,
Both now describe a sort of belt or band,
By joining issue in this favoured land.

1.
Who has the gift of this will often seem
To be a wiser man than wise men deem.

2.
I do this, even as you amass
Love and affection for a pretty lass.

3.
An everlasting art that's worth the learning,
It is better far than burying or burning.

4.
Somewhat sheepish, but typical as well
Of greater innocence than tongue can tell.

5.
This is I own a puzzler if you will,
Though but another name for I-Colm-Kill.

6.
Urbanity some scarcely understand,
Would this be more deserving at their hand?

FUJIYAMA.

TRIPLE ACROSTIC.

In days of old my last were reckoned
By superstitious folks quite clever,
For they professed to read my second
And tell the future's fate; but never
Did their absurd pretensions ere exceed
The bare solution of my first, indeed.

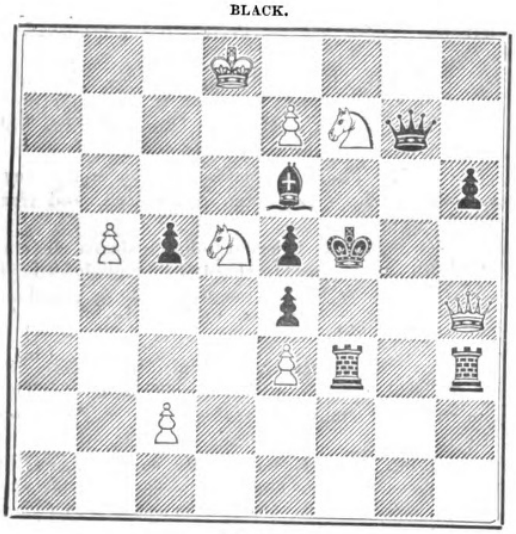
1.—While birds sing blithely in brake and bower
Swiftly we glide o'er the rippling stream,
Or lazily drift till the sunset hour
Closes the charms of a summer dream.

2.—If for a why you substitute an eye,
Then you will leave incorporality.

3.—But cut a letter off—the operations' slight—
And then I'll overpower you with light.

4.—In Greece, in the glorious days of old
I was welcom'd and eargerly sought,
For by me was the worth of an article told
Whene're it was sold or bought.

5.—My composition oft entails anxiety and care,
And yet with fervent kisses I am welcomed by the fair.



6.—By chemists' art the rudest things of earth
To subtlest essences must oft give birth.

7.—If, in conclusion, you should guess this light.
'Twill demonstrate that for the whole you're right.

Answers to Chess Problem and Acrostics are solicited.

Trials of Reaping Machines.—A very interesting exhibition and trial of reaping machines took place on Lord Kinnaird's farms of Little Powgavie on Wednesday last, when four machines were tried, including that of Mr. Walter A. Wood. A self-delivery reaper of Burgess & Key's make was exhibited, and worked well. The new self-delivery reaper of Messrs. Howard of Bedford, called 'The Simplex,' was also tried. The cutting of this machine is simply perfect, and it sheaves beautifully. The draught is also peculiarly light—one pair of horses can work it all day with the greatest ease. The body of this machine is made of wrought iron, with steel gearing, which, while ensuring strength, combines lightness. The large wheel is morticed, and this prevents clogging, and by a simple ratchet the knives can be very easily raised or lowered. There is also a switch gear for regulating the sheaving. The crank shaft is bored hollow, so as to lead the oil to the connecting-rod that works the knives. The work done by this machine was admitted by all the experienced agriculturists on the ground to be of the most superior description. This machine had been tried a few days previously in East Lothian on a very heavy crop of oats, which it cut admirably. These oats were laid and twisted, in such a manner as to test its powers to the utmost.—*From the "North British Agriculturist," September* 26th 1877.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—The market is firm for good spinnings of *Yarns* 16/24 and 28/32, and prices have slightly advanced. 38/42 are dull, but there is a very good demand for 16/24 reverse twist. In *Shirtings* some business has been done at continued low prices. Other articles are not attracting much attention.

Grey Shirtings:—						
7 lbs.	38½ yds.	39 in.	per pce.	...	$1.45	to $1.75
8 lbs.	38½ yds.	44 in.	,,	...	1.80	to 2 20
8 lbs. 4 to 8½ lbs.	38½ ,,	39 in.	,,	...	1.60	to 2.35
9 lbs.	38½ ,,	44 in.	,,	...	2.00	to 2.52½
T. Cloth 7lbs.	24 ,,	32 in.	,,	...	1.40	to 1.57½
,, 6lbs.	24 ,,	32 in.	,,	...	1.10	to 1 25

White Shirtings:—						
60 to 64 reed	40 yds.	35 in.	per pce.	...	2.20	to 2.40
Turkey Reds	24 yds.	30 in.	2—3 lb. per lb.	...	0.65	to 0.80
Black Velvets	... ...				7.25	to 8.25
English Drills	14/15 lbs.	40 yds,	30 in.	...	2.40	to 2.65
Taffachelaes	12 yds,	43 in.	...	...	1.80	to 2.25

Yarns.—

No. 16 to 24	... ...	per picul...	$28 00	to	32.50
No. 28 to 32	... ...	per picul...	$31 50	to	35.50
No. 38 to 42	... ...	per picul...	$37.00	to	39.50
Reverse Twist 16-24	... ... ,, ...		$34.50		

Woollens.—A little more activity has been experienced during the past week, but so far without any quotable improvement of prices. For superior qualities of *Black Plain Orleans* some demand exists at somewhat better prices. *Mousselines de Laine* are firmer; transactions continue, however, on a very small scale, as buyers do not respond to the advanced rates asked for.

Plain Orleans	... ...	40—42 yds.	32 in.	...	5 60	to 7.00
Figured Orleans	... ...	29—30 yds.	31 in.	...	4 25	to 5.50
Shimagoro	... ...	30 yds.	30 in.	...	3.75	to 5.25
Italian Cloth	... ...	—30 yds.	32 in.	...	0 25	to 0.32
Camlet Cords	... ...	29—30 yds.	32 in.	...	5.75	to 6.00
Camlets Asstd.	... ...	56—58 yds.	31 in.	...	—	
Lastings, Japan	.. ..	22—30 yds.	32 in.	...	12.00	to 18.00
Plain Mousselines de Laine		—30 yds.	30 in	...	0.17	to 0.18

Figured Mousselines de Laine	...30 yds.	30 in...	0.25	to	0.28½	
Multicolored ,,	...30 yds.	30 in...	0.28	to	0.37½	
Cloth, all wool plain or fancy	...48 in. to 52 in...	0.80	to	1.20		
Presidents	... ...	...54 in. to 56 in...	0.60	to	0.65	
Pilots	... ...	...54 in. to 56 in...	0.45	to	0.55	
Union	... ...	...54 in. to 56 in...	0.60	to	0.80	
Blankets, scarlet & green	6 to 8 lbs....	per lb ...	0.40	to	0.45	

Sugar.—Some 3,000 piculs of Brown Sugar have been settled at a decline of 10 cents per picul. White Sugars show no alteration.

Sugar:—Takao in bag	... ...	per picul...	$4.20			
,, in basket	... ...	,, ...	$4 05			
Taiwanfoo in bag	... ...	,, ...	$4.10			
do. in basket	... ...	,, ...	$4.00			
China No 1 Ping-fah	... ...	,, ...	None			
,, No. 2 Ching-pak	....	,, ...	$7 60	to	$8.20	
,, No. 3 Ke-pak	... ...	,, ...	$7.10	to	$7.50	

China No. 4 Kook-fah	... ...	per picul...	$6 60	to	$7.00	
,, No. 5 Kong-fun	... ...	,, ...	$6.00	to	$6.50	
,, No. 6 E-pak	... ...	,, ...	$5.10	to	$5.60	
Swatow Brown	... ...	,, ...	None.			
Daitong	... ...	,, ...	$3.70	to	$3.90	
Japan Rice	... ...	,, ...	$2.10	to	$2.60	
Kerosene Oil, nominal	... ...	noml. ...	$4.00			

Kerosene Oil.—The market is quiet at about $4.

EXPORTS.

Silk.—A brisk demand has continued for this article during the week. A slight check, however, took place upon receipt of disquieting political news from France, but this was of short duration, business has been resumed, and the market closes very active.

Quotations remain unaltered, but the tendency of prices is decidedly upwards, and many of the most desirable parcels are held off the market for a further considerable advance. The inferiority of the bulk of Hank Silk now in stock and coming forward, is very generally remarked.

Settlements for the week are 950 bales of Hanks, and 250 bales of Oshius and other sorts. The stock is barely 2,000 bales.

		In London at 4s. 0d. per lb.	*In Lyons at f. 5.05 per kilo.*
Hanks,—Superior ..... Nominal.	$600	21/5	59.00
,, Best No. 1 & 2	$580 to 590	20/9 to 21/1	57.00 to 58.00
,, Good No. 2	$560 to 570	20/1 to 20/5	55.50 to 56.50
,, Good all round No. 2½	$540 to 550	19/5 to 19/9	54.00 to 55.00
,, Medium No. 3	$510 to 530	18/6 to 19/1	51.00 to 53 00
,, Common to inferior No. 4 & 5	$480 to 500	17/6 to 18/2	48.50 to 50.50
Oshius,—Extra	—	—	—
,, Best	$560 to 570	20/1 to 20/5	55.50 to 56.50
,, Good	$530 to 540	19/1 to 19/5	53.00 to 54.00
,, Medium	$500 to 520	18/2 to 18/10	50.50 to 52 00
Hamatski,—Good to Best	$470 to 480	17/2 to 17/6	47.50 to 48.50
,, Common to Medium	$450 to 460	16/6 to 16/10	45.50 to 46.50
Kakeda,—Extra and Best	$630 to 650	22/5 to 23/1	62.00 to 64.00
,, Good	$580 to 600	20/9 to 21/5	57.00 to 59.00
,, Medium	$500 to 550	18/2 to 19/10	50.00 to 55.00
Filatures	$630 to 750	22/5 to 26/4	62.00 to 73.00

Tea.—An extensive business in this staple has been done during the closing week, influenced in no small degree by reports of an impending re-imposition of duty in the United States. Settlements reach the large total, for this period of the season, of 3,800 piculs.

The natives having received early information of the proposed alteration in fiscal affairs in America, stiffened their holding prices, and quotations are from $1 @ $2 higher than in our last issue. Stocks continue only moderate.

Common	$11.00 to $12.00	Fine	$23 00 to $26.00
Good Common	$13.00 to $15.00	Finest	$28.00 to $32.00
Medium	$16.00 to $17.00	Choice	$36.00 to $38.00
Good Medium	$18.00 to $21.00	Choicest	—

EXCHANGE AND BULLION.

Exchange.—Sterling rates have remained very steady throughout the past week, with only a moderate business doing.

Rates close as follows:—

STERLING—Bank 6 months' sight	3s. 11⅞d.

Per Steam-ship *Bombay*, from Hongkong.—Mr. Levy, Mr. Li-sin-tong, and 1 Chinese on deck.

CARGO.

Per Steamship *Sunda* for Hongkong:—

Silk for England	...	457 bales.
France	...	236 „
Italy	...	102 „
Total	...	795 bales.

Per Steam-ship *Nagoya Maru*, for Shanghai and ports:—

Treasure	... $3,200.00

Per Steam-ship *Bombay* from Hongkong.—

General	... 600 pkgs.
Sugar	...1,275 „
Total	...1,875 pkgs.

REPORTS.

The *Gaelic* reports: Left San Francisco Nov. 17th at noon; had North Westerly winds with heavy seas for ten days, moderate variable winds for seven days; and light breezes from N.E. and S.E. to arrival at 8 a.m. on the 11th December. Signalled the P. M. S. S. *China* at 3 p.m. on the 9th instant steering East.

The British steamer *Zanzibar* reports: Left Hongkong at 8 p.m. December 2nd; experienced strong moonson to the Formosa channel, and strong gales from Turnabout to the coast of Japan; thence fresh Northerly winds to port. Passed the barque *Eme* off Sagami, bound in.

The *Bombay* reports: Left Hongkong December 4th at daylight; experienced strong monsoon through the Formosa Channel, and fresh northerly gales to the coast of Japan. On the night of the 12th instant between Oosima and Omai-saki had a heavy northerly gale with monutainous sea running, lasting 12 hours; thence to port fresh northerly winds and moderate weather, arriving at midnight on the 13th December.

The *Eme* reports: Left Kobe Dec. 8th; had variable winds and fine weather in the Kii Channel, and thence westerly winds to Rock Island, where, on the night of the 12th inst, met with a severe gale from the North, veering to East and South East, with a heavy southerly sea running. The gale lasted until the afternoon of the 13th when it lulled, and continued moderate to arrival in port at noon on the 14th Dec.

The *Tamaura Maru* reports: Left Kobe December 13th at noon. The *Banri Maru* in tow of the *Kumamoto Maru* had left an hour previous, and when passed by the *Tamaura Maru* in Isumi Straits at 3 p.m. was hugging the northern shore. During the afternoon passed a 3-masted schooner with mizen mast gone (thought to be the late *Snap*), bound towards Kobe. Toward dusk observed a wrecked junk on the starboard bow, on her beam ends, but with her mast holding, which was tossing about in the heavy swell; steamed towards her in case some of the crew might be still clinging to her, but found her abandoned. One anchor had been let go and apparently was still holding her, as, in her then position about 4 miles W.N.W. of Cape Hino, there was but 17 fathoms of water. Owing to the increasing darkness and the heavy sea running was obliged to leave her. Experienced fresh N.W. winds and fine weather to Cape Sima and moderate weather to port.

The Chinese frigate *Ha-yin* was in Kobe when the steamer left.

DYSENTERY, CHOLERA, FEVER, AGUE, COUGHS, COLDS, &C.

Dr. J. COLLIS BROWNE'S

CHLORODYNE

(Ex. Army Med. Staff)

IS THE ORIGINAL AND ONLY GENUINE.

CAUTION.—Vice Chancellor Sir W. P. Wood stated that Dr. COLLIS BROWNE was undoubtedly the Inventor of CHLORODYNE; that the story of the Defendant, Freeman, being the Inventor was deliberately untrue, which he regretted had been sworn to. Eminent Hospital Physicians of London stated that Dr. Collis Browne was the discoverer of Chlorodyne; that they prescribe it largely, and mean no other than Dr. Browne's.—See "Times." July 12th, 1864.

The Public, therefore, are cautioned against using any other than

DR. J. COLLIS BROWNE'S CHLORODYNE

REMEDIAL USES AND ACTION.

This INVALUABLE REMEDY produces quiet refeshing sleep relieves pain, calms the system, restores the deranged functions and stimulates healthy action of the excretions of the body without creating any of those unpleasant results attending the use of opium. Old and young may take it at all hours and time when requisite. Thousands of persons testify to its marvellous good effects and wonderful cure, while medical men extol its virtues most extensively, using it in great quantities in the following diseases:—

Diseases in which it is found eminently useful—Cholera, Dysentery, Diarrhœa, Cholics, Asthma, Rheumatism, Neuralgia, Whooping Cough, Cramp, Hysteria, &c.

EXTRACTS FROM MEDICAL OPINIONS.

The Right Hon. Earl Russell communicated to the College of Physicians and J. T. Davenport that he had received information to the effect that the only remedy of any service in Cholera was Chlorodyne.—See "Lancet," December 31st, 1864.

From A. Montgomery, Esq., late Inspector of Hospitals, Bombay:—"Cholorodyne is a most valuable remedy in Neuralgia, Asthma, and Dysentery. To it I fairly owe my restoration to health, after 18 months' severe suffering, and when other remedies had failed."

Dr. Lowe, Medical Missionary in India, reports (Dec. 1865) that nearly every case of Cholera in which Dr. J. Collis Brown's Chlorodyne was administered the patient recovered.

Extract from "Medical Times," January 12th, 1866.—"Chloro dyne is prescibed by scores of orthodox medical practitioners. Of course it would not thus be singularly popular did it not supply a want and fill a place.

Extract from the General Board of Health, London, as to its efficacy in Cholera.—"So strongly are we convinced of the immense value of this remedy that we cannot too forcibly urge the necessity of adopting it in all cases."

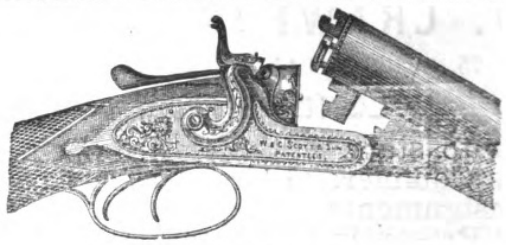
Beware of spurious and dangerous compounds sold as CHLORODYNE, from which frequent fatal results have followed.

See leading article. "Pharmaceutical Journal," August 1st, 1869, which states that Dr. J. Collis Browne was the inventor of Chlorodyne; that it is always right to use his preparation when Chlorodyne is ordered.

CAUTION.—None genuine without the word "Dr. J. Collis Browne" on the Government stamp. Overwhelming medical testimony accompanies each bottle.

The public are further cautioned, a forgery of the Government stamp having come to the knowledge of the Board of Inland Revenue.

SOLE MANUFACTURER—



J. T. DAVENPORT,

83, Great Russell Street, Bloomsbury, London.

Sold in bottle at 1s, 1½d., 2s. 9d. and 4s. 6d.

Yokohama, December 15, 1877. 26ins.

W. & C. SCOTT & SON.

FIRST PRIZE MEDAL and DIPLOMA OF HONOUR awarded, CENTENNIAL EXHIBITION, Philadelphia, 1876. For excellence of Materials and Workmanship in their PREMIER QUALITY and medium grades. Their New PATENT TRIPLEX action and COMPENSATING LUMP.

The attention of Sportsmen is requested to the above new system of action. Its superior strength and solidity imparts greatly improved shooting powers. Hard hitting being the desideratum required is obtained by this powerful Gun.

Prices of the TRIPLEX: £22.10.0, £30.0.0, and £37.10.0. This latter is our highest quality and is marked "THE PREMIER QUALITY."

Excellent DOUBLE-GRIP BREECH-LOADERS at £8.10.0, £12.0.0, £16.0.0 and £20.0.0. Shooting guaranteed.

OUR PATENT TOP LEVER with PURDEY solid double bolt. Shooting guaranted. Sound plain finish £15/0/0. Well finished, good materials £21.0.0. Cases and implements £4, £6 and £8 extra.

In the New York International Gun Trial competition, 1873, the Committee awarded our guns the Diploma, being declared first for points of merit of action, materials, proportion and shooting qualities.

Extract from Forest and Stream, New York, December 26th, 1876. Contributed by one of the judges of awards of guns at the Centennial. "The crowning glory of the display was the case of W. & C. Scott & Son. This firm has sent more good guns to this country during the past few years than any other, and they especially commend themselves to American sportsmen from the fact that they furnish good guns, honestly made, and of high shooting powers at very moderate prices. Their TRIPLEX ACTION combines, in the highest degree, strength with simplicity, and it must rapidly secure the favor of all who test its merits."

OUR PATENT COMPENSATING LUMP strongly recommended; should be ordered on every gun (cost, 30 shillings extra). For the Sportsman abroad, this invention is invaluable, being secured against the joint becoming loose after several years wear.

CHOKE BORED GUNS.—Slight, Medium or Full.

BREECH LOADERS in all systems from lowest qualities.

SINGLE and DOUBLE MUZZLE LOADERS.

Makers of the NEW SWINBURN-HENRY Sporting Express and SWINBURN-HENRY RIFLES and Carbines taking Government Ammunition. This Rifle is a great improvement on the Martini.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded.* This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

DEATHS.

On the 18th December, at No. 17, Tsukiji, Tôkiô, FREDERICK C. HAYES, aged 26.

At Yokohama, December 18th, FRANÇOIS PERREGAUX, aged 43 years.

Notes of the Week.

The most important event of the past week has been the arrival on the 16th instant of the Chinese frigate *Hai-an*, having on board the members of the Chinese Embassy to Japan. The Embassy consists of their Excellencies Ho and Chang, the Consul Fan, Vice Consul and suite of interpreters, secretaries of Legation and officers, in all sixteen persons. A large number of persons assembled to witness the landing, which did not however take place until three o'clock on the following day, and was effected in a very quiet and unostentatious way. Their Excellencies Ho and Chang, accompanied by Dr. McCartee, the Chinese Consul and Vice Consul, and a few members of their suite, proceeded in Government steam launches to the English hatoba, where they were received by the *Kencho* officials, and the principle members of the Embassy proceeded thence in carriages to the *Kencho* where they stayed for a short time and then adjourned to the *Machigaisho* where tiffin had been prepared for them. That concluded, their Excellencies visited the building near the Railway Station known as the *Gaimusho-shito hojo*, which by order of the Government has been placed at the service of the Embassy as a temporary residence, until a permanent one has been decided upon. Their Excellencies expressed their approval of all that had been done for their accommodation, but in consequence of all their baggage being on board the *Hai-an* they decided to return to that vessel for the night. During the morning their Excellencies were visited by the Captains of the foreign men-of-war lying in the harbour, and the usual salutes were exchanged.

During the passage from Kobe the *Hai-an* fell in with six survivors of a wrecked Japanese junk, who lashed to spars had been floating about for three days, and rescuing them from their perilous condition landed them at this port. When discovered by the frigate they were almost dead through exposure; while near by the dead body of one of their companions floated, lashed to some planks. The junk, rice laden, had foundered in the late fierce gale of the 11th-12th instants, which has been felt along the whole eastern coast.

As will be seen from a paragraph which we published in this morning's issue and which was copied from the Shanghai *Courier*, the Honble George French, late Chief Judge at Sierra Leone has been appointed Chief Judge of the Supreme Court at Shanghai. We have since heard a report to the effect that the judicial establishments for China and Japan are henceforth to be separate and that Mr. Goodwin has been appointed judge of the Court for Japan. If this be the case, and we have good reason for believing the report to be correct, we trust that ths community may soon have the pleasure of welcoming back a gentleman whose rare attainments and social qualities won for him universal regard, and whose temporary absence has been a great loss to his friends.

In another portion of to-day's issue will be found a letter from our correspondent of the 8th instant, "Renaisance (sic.) du Japon," which we insert without change of spelling or phraseology (lest we should be accused of garbling) in the hope that its perusal will afford our readers as much amusement as it has afforded ourselves. Our correspondent appears to be as fond of the phrase 'Quid pro Quo,' as Wamba was of his 'Pax vobiscum,' but does he know what it means? When the treaties with Japan were first made there was a quite sufficient 'quid' for every 'quo.' With few exceptions every exportable and importable article was subjected to duty, not high it is true, but of almost universal imposition. At the same time foreigners were only allowed to dwell within a cramped concession, and not permitted to breathe the air or walk the ground to pluck a flower or catch a butterfly outside of the ten *ri* limit. For ten years the most cowardly species of assassination was practised with the view of frightening us out of the country, and some of the very men now in power did all they could to bully the Shôgun into expelling "the ugly barbarian." In fact, one of the principal accusations brought against the Shôgunate in 1868-9 was that the expulsion had not been effected. In a word, if we curtailed the sovereignty of Japan—then a congeries of sovereignties rather than an empire—so far as foreigners were concerned, the Japanese had the satisfaction of curtailing our liberty of movement, and our freedom of action in many other respects as well, to at least an equivalent extent. At the present day we are subject to restrictions and disabilities that do not affect foreigners in any other part of the world, and we have not seldom to put up with an insolence and injustice upon the part of native officialdom unparalleled in any country with which we are acquainted and for which our representatives can usually procure us no redress. Now we have no wish to rake up the past or enquire

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

whether in 1859 we were justified in making the treaties then accepted by the Japanese, as far as we know, without any objection on their part other than the objection to make any treaty whatever. That we did not listen to that objection the Japanese cannot complain to-day. But whatever the rights of Japan may have been twenty years ago, she is now, we fully believe, and we have explicity declared in this journal in the most unmistakeable language, entitled to be treated in every respect—save possibly that of jurisdiction over foreigners, for which she appears not to care to take the little trouble necessary to qualify herself—as a civilised European power would be treated, and ought to be accorded complete freedom upon questions of tariff. But the 'quid pro quo' argument is altogether the wrong one to make use of. The question is one of right, not a mere bargain, and will be so considered and treated by the foreign powers.

The strictures upon the note to our angry correspondent's not very amiable communication inserted in our issue of the 8th instant, we altogether fail to understand either the appropriateness or the drift of. The facts we asserted are perfectly true, and we simply pointed them out. The letter stated generally that silk sent to Europe paid duty. We showed that the statement should have been qualified by the exception of Great Britain. Some 200,000 lbs., at the most, of Japanese tea are imported into Europe, where no one will touch it knowingly, and where it is used chiefly, we believe, for adulterating or imitating Chinese tea. A duty, it is true, and a high one, is levied npon it in England, but precisely the same duty is levied upon tea produced in India, some 30 million pounds of which are annually imported into Great Britain. With us it is perfectly well recognised that all customs duties are economically objectionable, and only some dozen articles (apart from alcoholic liquors) are accordingly dutiable in England. When a perfect mode of assessing an income tax shall have been discovered, we do not doubt that the whole of the customs will be abolished, the whole indirect taxations of the country indeed done away with, save the excise on alcoholic liquors and perhaps tobacco, which will be continued, as it is to some extent now imposed, less as a means of revenue than as a measure of public health and morals. The abolition of the tea-duty has often been proposed and Mr. Bright's famous 'free breakfast table' will probably at no distant period become an accomplished fact. One of the principal arguments advanced for the retention of the duty is, that it forms the only means (apart from excise duties) of extracting from the working classes their proper contribution towards the expenses of Government. We have not space to go through the whole of our correspondent's letter, nor, indeed, should we fatigue our readers with this notice, were it not that the erroneous views expressed by 'Renaisance etc.' seem to be shared by an influential section of the ruling class in this country. We think 'Renaisance etc.' is misinformed when he asserts that but little of Japanese silk goes to Great Britain. We are under an impression which we cannot, however, verify at the moment, that fully one half of the silk exported is sent to London. Nor do we see any hindrance to the imposition of discriminating duties; such duties are with ease collected in England on the wines of different countries under special treaties. If any favoured nation clause be an impediment, it ought to be abolished, it ought indeed never to have been inserted in the treaties. Let Japan offer to adopt the 'quid pro quo' system with England, tax what we tax at the same rates ,and leave untaxed what we leave untaxed, and we make no doubt we should accept the offer.

In referring to the export of *kobans*, our correspondent forgets that if foreigners paid much less for them than they were worth in Europe, they paid much more for them than they were worth in Japan. Japan had chosen to isolate herself from the rest of the world, and in that way and in other ways had to expiate her folly. Her expiation of two centuries of selfishness is indeed probably not yet complete.

We must now take leave of our correspondent, assuring him that the mode of discussion he has adopted would spoil the best cause. Vapid rant about British avarice, British cunning, British we know not what, commands no attention whatever. We simply say to Japan and to the world, Here are our goods, will you buy them? We make no attempt to force them on any one, we only ask for the freedom to be accorded to us we accord to others. Thus far, at least we may with justice claim to be the fairest-minded people in the world. The great object of our correspondent seems to be to excite or to show hatred of a friendly nation. If he meets with any success in the former enterprise we do not envy him it. His admiration and his hatred are equally matters of indifference to us. He talks of the "noble British blood" shed in Japan by skulking murderers, and the phrase is the truest one in his letter. The humanity and the good feeling of his sneers at the unfortunate victims of Japanese assassins we leave others to judge of. What the Japanese standard of morals and good taste may be we know not—we are only sure and thankful it is not our own. The practice of exacting blood money we are far from admiring, though a negligent Government perhaps may justly be held as equally liable with a negligent railway company. But where the assassin is caught and punished there can be no doubt no indemnity ought to be demanded from the Government. We have freely criticised what we consider open to objection in our correspondent's letters, because we think it our plain duty in the present crisis to do what we can to ensure a temperate and sensible discusion of the questions involved in the revision of the treaties, and though we desire that the completest justice should be shown in all our dealings with the Japanese, we have not the remotest intention of flattering or pandering to the conceit of young Japan. Violent epithets and indiscriminate abuse with or without bad logic never helped any cause, and our correspondent's advocacy of a cause, good in itself, would excite less amusement but command more attention if conducted on different principles from those he has chosen to guide himself by.

Referring to a recent statement made by the *Nichi Nichi Shimbun* to which we drew attention at the time, to the effect that if the Japanese Government wanted to purchase machinery which could be supplied by a foreign country for a million *yen*, but which would cost twelve hundred thousand if made by a native manufacturer, it would be better for the country if it were to procure it from the latter source, a writer under the signature of *Soroban* addresses to the *Hiogo News* an excellent letter, in which he clearly sets forth the fallacy of such reasoning. We cannot do better than quote his argument at length. One of our contemporaries upholds the statement of the native writer on the ground that while the Government pays $200,000 more than it needs have paid, $1,000,000 remain in the country which would otherwise have left it. To this *Soroban* replies as follows:—

"Now I am not going to open up the whole discussion of free trade and protection, but I just want to put down something which it has occurred to me would grow naturally out of such a state of things as is here advocated, and which I hope will occur to the Japanese also before it be too late. I am speaking to those who would shut out foreign manufactured articles altogether by a practically prohibitory tariff, and I give them the credit of discerning that this practically means commercial isolation, for they can hardly be so ignorant as not to know that a country which desires to export its own products and to take no products of any other country in exchange, that is, nothing but the precious metals in the form of a *medium of exchange*, can never do any amount of trade worth mentioning. Commerical isolation, then, being established, where does the Government get the $1,200,000 which it is to pay for the machinery? It has only one legitimate source of revenue—the taxes—so that on this one transaction the people would be taxed $,200,000 more than need be to make a profit for one native manufacturer. Nothing is *added* to the wealth of the country either then or at any future time by the transaction; for reciprocal trade having been killed, the products turned out by the machinery must be sold *in* the country *to* the people, who will have to pay more for those products than if the machinery had cost less, and are therefore practically taxed twice over for the same thing. It seems to me that to say that the country as a whole is richer for this kind of proceeding is nonsense—it seems to me only that while the taxes on labour are increased, so likewise will be the price of every manufactured article The United States have been trying hard to prove to the world that what I may call "isolation by protection" is the right system, and though I cannot expect all your readers to be as familiar as I am with the state of affairs in New York,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

I would point to what is within the knowledge of all men who read—the recent gigantic revolt there of labour against capital—as one of the fruits of the system, so far. But what I would like specially to point out to the Japanese is that they have already tried the system, in fact only a few years ago left off a trial of it which lasted about two hundred and fifty years—and that one of the principal results of that remarkable experiment in political economy was the degradation of labour right down to the ground, at the hands of privileged classes, amounting to one sixteenth of the nation, who lived in comparative idleness and luxury, governing by the power of the sword alone. I should have thought that after such an experience as that of the working of "isolation by protection," it would be about the last political nostrum which the people of Japan would be likely to swallow."

A noticeable feature in Japanese streets and indeed along the high roads or bye roads wherever a native hostelry or way side inn may be situated, is a flag, one may say a series of flags, attached to bamboo staffs, bearing the letter E in most cases repeated two, three and sometimes four times. In the centre of the flag a well known Japanese character signifying, "to transmit," "to communicate" is conspicuous, but while to the uninitiated this may mean anything, there is no mistaking the familiar letter of our own alphabet, and its appearance amongst the cabalistic signs general throughout Japanese streets has prompted many enquiries, hitherto however with but unsatisfactory results.

The following explanation has now been furnished to us by a Japanese who vouches for its accuracy, but at the same time admits that to the people generally the letter carries no significance whatever. Before giving the explanation we may refer to one of the numerous queries that have been made in respect to it which displays some ingenuity on the part of the manufacturer.

In consequence of the flag bearing these letters being exhibited at forwarding agencies or parcels' delivery offices, it was conceived that there might be some connection financially with the well-known Bankers Mitsui, and as three E's appeared more frequently than two or one, the idea presented itself that it was a play on the words Mitsu-i. The letter E being arrived at as expressing the sound of the last syllable, and the word "*mitsu*" being translatable into "*three*." Unfortunately for the originator of this solution, the flags were seen to have four letters almost as often as three, and in many cases the number was less.

The real explanation would appear to be this. Certain Japanese caught at the signification of the word express, a word in common use both in England and America as applied to agencies and offices charged with the transmission of goods. Some few accordingly adopted the first letter as a sign for such offices in Japan, joining with it the Japanese characters above referred to meaning "to transmit" or "communicate." The sign has now become so general as in a great measure to have lost its import, and it may be frequently seen displayed on *jinrikishas* and coolies coats.

Six years ago Monsieur Edmond Planchùt, a French traveller, wrote as follows in an account of his travels published in the *Revue des Deux Mondes*:—"When after leaving the Far East, I took passage for Europe upon the fast sailing steamer *China*, and rehearsed in my mind all I had learned and heard about this beautiful land of Japan, I resolved on my arrival in France I would recommened to that class of youth of my country who, with courage, aim to rise above a mediocrity without horizon, to imigrate thither. With enterprise, courage, and honesty, they could not fail to succeed in this Scotland of the East. Success would be all the more probable because Japan, as compared with other countries, has been but little explored." Monsieur Planchut would find abundant cause to moderate his ecstacies at the present time, and we only hope for their own sakes that none of the courageous youth were influenced by his glowing descriptions of this then imagined El Dorado of the Eastern seas. But Monsieur Planchut is not the only one who has been deceived by the false promises of the mirage.

In the recently published work on Russia by Mr. D. Mackenzie Wallace, occurs the following passage:—

"As with individuals so with nations. By accepting in a lump a foreign culture, a nation inevitably condemns itself for a time to intellectual sterility. So long as it is occupied in receiving and assimilating a flood of new ideas, unfamiliar conceptions and foreign modes of thought, it will produce nothing original, and the result of its highest efforts will be merely successful imitation." How true are these remarks is clearly demonstrated in the case of Japan, where we have before our eyes a striking example of the results of a nation casting away as a childish thing all the originality that has been the outcome of ages of isolation, and giving itself over to weak imitations of what is foreign in art, dress and modes of life. As yet the new era is too young to admit of such imitations being successful. Take Japanese art for example. In a review which was lately published on Mr. Bousquet's admirable work on Japan, it was shown how with the especial facility of Japanese for imitation, the intercourse with foreigners has almost ruined native talent, and extracted from the ancient art of the country a great deal of what commanded the admiration of the world when its peculiar excellencies first became known. Where are now to be found among modern productions those delicately chiselled bronzes whose every ornament, no matter how insignificant, bore impress of originality of conception and loving touch of a master's hand? Where can we find, except in old examples, those pictures, which while conventional as far as regards the form of the objects delineated, surprised with the daring of their colouring, while they charmed with the tenderness and beauty of their harmonies? The exquisite porcelain, the wonderful metal work, the priceless lacquer; what master hands are engaged at the present time in keeping up the deserved reputation of Japan for these, her special arts? In their place are horrible Birmingham bronzes, pictures in imitation of bad foreign styles whose colour sets one's teeth on edge, nightmare productions in the shape of vases and lacquered furniture that find a market one is at a loss to know where. It is true that all nations, which like Japan are suddenly confronted with the magician of modern civilization, are dazzled by the temptations held out to them, and are apt to follow blindly the first impulse to exchange old lamps for new ones, only to discover too late that in what they so readily abandon lies the original power that has charmed the world, and that the glitter of the new in their unaccustomed hands soon wears off, leaving but a poor and worthless imitation."

Tosa can scarcely be a pleasant place to visit nor the paradise of policemen. According to the *Akébono*, when any travellers go there and take up their quarters at a hotel, the *samurai* of the place walk in and endeavour to get up a discussion. They also throw stones in at the windows. The police stationed there likewise come in for a share of these attentions, and if any attempt at arrest is made, the *samurai* at once hide themselves in secure places. Last month the photograph of the Emperor was exhibited to the people in the public garden. The *samurai* availed themselves of the occasion to create a row by throwing stones at the troops of the garrison, and causing a fight which was only quelled by the intervention of the members of the Tôkiô police stationed at Kôchi. On the nights of the 22nd and 23rd of last month, the *samurai* met in large numbers at the temple of Hachiman and held a festival, saying that it was to drive away the cholera. They became so noisy that the *Kencho* authorities ordered them to desist, but they would not listen to them. Finally the police were sent to restrain them but they only threwr stone at them, until at last the police were compelled to use their batons freely and captured several of the party, the police sergeant leading his men with drawn sword. After this the disturbance calmed down. At ten o'clock on the night of the 4th instant, five students of the *Risshisha*, assaulted some of the Police by running up against them. As might be expected a fight ensued which ended in the police being reinforced the five *samurai* arrested. At their day examination they refused to admit that they were in the wrong. They were accordingly deprived of sleep for three

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

days and night, being subjected to constant examination, and at last admitted the offence. Again on the night of the 9th instant some students of the Nanyosha came and sang at the top of their voices before a branch police station. On being arrested they were followed by a large crowd of *samurai*, all members of the same society, and as the policemen were only four in number, assistance had to obtained from the head station. The whole crowd was then arrested including the head of the society, and are now undergoing examination.

By a few remarks that were made in the *Chôya Shimbun* recently, it would seem that the Government is contemplating further reductions of expenditure by a similar step to that of last January, namely, the dismissal of a number of officials from the various public departments. In order that these remarks may be understood it is necessary to give a short explanation of the Japanese superstitions regarding the origin of earthquakes, *jishin*. These phenomena are supposed to be due to the presence of a monstrous cat-fish (*namadzu*), who has his abode under the islands of Dai Nipon. This fish is generally kept from moving any portion of his body by the God named Kasuga Miyo-jin, who bestrides him and holds him down with all the force of his muscular arms. Occasionally, however, the monster endeavours to escape from the clutches of the God and causes great commotion and sometimes dire ruin by his struggles. A general dismissal of officials from Government departments is also known by the term *jishin* or earthquake. At the present time there is a common impression that such an action is contemplated, and although the Editor of the *Chôya* speaks thus jestingly, his utterances have a veiled meaning.

The following is the parable.

"The great cat-fish lashing out his beard and preparing his body for a death dealing throe, asked Kasuga Miôjin if he should begin.

Then said Kasuga Miôjin. "What are you about to begin again? What do you mean? The great storm has only just passed away and the lakes and seas have become tranquil. Do you then, regardless, intend to cause an earthquake?"

Replies the cat-fish "I know that it is wrong, but still as I have hardly any rice or money, and cannot provide for so many fishes of the seas and lakes, I must cause some great convulsion in order to extricate myself from my present troubles. "But why" asks the God "cannot you borrow some money from the monsters of the northern seas and southern climes?"

"It is easy enough to say borrow" answers the cat-fish "but how about repayment?"

"But" suggests Kasuga "cannot you manufacture those flimsy things?"

"No" says the cat-fish "I have already made large quantities, and it won't do to make any more."

"Then" says Kasuga "it would, I think, be better for you to try economy."

"I know that" replies the cat-fish, "but how can I strip myself of those golden scales which beautify my body, and don sea weeds in their place. I am terribly perplexed. Still an earthquake will be a step toward economy."

Then says the God "Well, if that is your object, an earthquake it shall be. But I wish to call your attention to one point. There must be no show of favouritism to certain places in the earthquake you are about to cause. You must shake the high places with the low, and when they have crumbled beneath the shock, you must not be in a hurry to reconstruct them. Thus you will cause the fishes of the lakes and seas to believe that it is a fairly administered earthquake. But if you do not act in this manner you will find that such a convulsion is not economical, though it be repeated once a month, or many times in a year. You only keep the fish in a constant state of alarm, and lose their confidence and zealous service.

"Yes! yes!" says the cat-fish, "I will act exactly as you advise."

"But your 'yes' cannot always he relied on" says the God.

"Of course not" replies the cat-fish, "but as to the earthquake it shall most certainly take place."

From the "Japan Mail Daily Advertiser."

Monday, 17th.

The *Kumamoto Maru* left Kobe at noon on the 13th December, with the *Banri Maru (Dumbarton)* in tow. She had a fresh N.W. gale in the Isumi strait, and moderate N.W. winds to Omae-saki; thence strong N.E. winds to Cape Sagami and moderate weather to port. The *Kumamoto Maru* brought 620 wounded soldiers, many of whom had to be borne in stretchers while disembarking yesterday, their situation being most uncomfortable, lying in open cargo boats under a heavy rain, from which they were only protected by a covering of blankets.

According to the *Chôya*, His Ex. Okubo Toshimichi was on the 14th instant raised to the rank of *Shosanmi*.

The Messageries Maritimes Mail steamer *Volga* left Hongkong on Saturday the 5th instant, at noon, with mails from Marseilles up to 4th of November.

The *Nichi Nichi Shimbun* says there is to be a thorough change made in the division of the wards of Tôkiô, and consequently in the numbering of the houses.

From the *Akébono Shimbun*.

Though no great inconvenince arose from the amalgamation of the Miôtô *Ken* with the Kôchi *Ken*, yet the people of Tokushima in Awa (lately part of the Miôtô *Ken*) announce that they intend to petition the Government that their district may be restored to the Miôtô *Ken*, or else that all the four provinces of Shikoku may be made made into one *Ken*, with the *Kencho* established in some central place.

Tuesday, 18th.

From the *Hôchi Shimbun*.

Yamazawa Shingo, a Japanese military student who has for some time been studying in France, wishing to see the war, obtained an appointment as Lieutenant, and was sent to the Russian Army. Lieut. Yamazawa giving proofs of great bravery in the field, has been decorated by the Emperor of Russia.

From the *Akébono Shimbun*.

Those persons under the jurisdiction of Osaka *Fu* who request to be permitted to trade with Korea, are gradually increasing. Up to the 11th of this month 180 persons have been received this permission.

A person returning from Owari says that the ex-Governor the *Ken* had given strict orders that the people living under his jurisdiction should wear their hair in foreign style, and that men and women should not ride together in *jinrikisha*. When a new Governor was appointed the same order was adhered to, but when the First Secretary of the *Ken* became chief judge he determined that such orders should be relaxed. He therefore had a large *jinrikisha* made in which he rode with his wife. Since then the people are gradually commencing to follow his example.

From the *Nichi Nichi Shimbun*.

On the 15th instant the following persons were rewarded at the *Daijôkuwan*:—Mr. Hayashi, Junior, Vice Minister of Home Affairs, with 3rd class of the order of merit; the 4th class of the order of merit to Messrs. Sekiguchi, the Governor of Yamaguchi *ken*, Watanabe the Governor of Fukuoka *ken*, Iwamura the Governor of Kagoshima *ken*, Kagawa the Governor of Owake *ken*, and Tomioka the Governor of Kumamoto *ken*.

Wednesday, 19th.

The P. & O. steamer *Malacca*, left Hongkong at 10 o'clock yesterday morning.

From the *Chôya Shimbun* we learn that the *Tsukuba Kan* is to proceed to Australia. She will be commanded by Captain Matsumura, and will have on board forty naval cadets, besides her crew of three hundred all told. She will probably leave in a few days, and is expected to return to Japan in about six months time. The *Seiki Kan*, the vessel which was built at Yokoska, will also start for a cruise to Europe very shortly, and will be manned solely by Japanese, so that it will be the first instance of a man-of-war, built in

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the East and manned by Asiatics, visiting European waters.

From the *Akébono Shimbun.*

A telegram was received on the 14th instant from Osaka stating that the publication of the *Osaka Nippô* had been suspended.

The Governor of Shimane *Ken* lately petitioned the Department of Home Affairs that all bankrupts might be deprived of the privilege of being appointed to any local offices, such as those of *Kucho* and *Kocho*, or as custodians of Shintô Shrines, and his petition has been acceded to.

From the *Nichi Nichi Shimbun.*

As mostly all the special work connected with the recent war has been finished, many of the officials of the Department of War will, it is expected, be dismissed next month.

From the *Hôchi Shimbun.*

Small-pox is prevailing in Ehime *Ken*. Nine persons have been attacked by the disease, which in two cases has resulted fatally.

Thursday, 20th.

An inquest was held at Tsukiji, Tôkiô, on the 19th instant, before H. S. Wilkinson, Esq., Coroner, and a jury, on the body of Mr. F. C. Hayes, who shot himself on the previous evening. The result of the enquiry was that the jury returned a verdict that "deceased shot himself while in a state of temporary insanity."

The *Akébono Shimbun* says that extensive repairs of the Yodo, Shinano and Toné rivers have been determined upon by the Department of Home Affairs. Two foreign engineers and a large staff of Japanese have already started for their destinations, and work will be commenced at once. The expense of the projected repairs will be very great, but by no means unnecessary.

From the *Chôya Shimbun.*

The Prime Minister has notified that cotton undershirts and drawers manufactured in Japan, can be exported free of duty.

On the 18th instant Nakahara Hisao and twenty others, who were accused of attempting to assassinate Saigo and other chiefs of the Private School party, were brought up for examination at the Kiushiu Special Court. They will probably be confronted face to face with the Satsuma officials who examined them in Kagoshima, in order to clear away any doubts about their innocence that may remain in the minds of the people.

From the *Akébono Shimbun.*

Some of the exhibitors at the National Exhibition have laid a complaint before the authorities with regard to the awarding of medals and honourable mentions. It would appear that some mistake has been committed, for the authorities have set at work to make investigations.

From the *Hôchi Shimbun.*

Two thousand eight hundred pounds of silver from the mines at Ikuno, in the province of Tajima, have been sent to the Osaka Mint. The mine is now expected to become fairly productive of the above metal.

Much rain has fallen in the Ishikawa *Ken* since the latter part of last month, and the floods occasioned by it have done much damages to the fields and river embankments in the provinces of Etchiu and Kaga.

From the *Nichi Nichi Shimbun.*

From the Takamine copper mines, in the province of Yamashiro, 500 *kuwamme* (about 4,200 lbs.) of pure copper, seventy bags of green vitriol and a large quantity of copper dust were mined during the last month.

As the Imperial Palace at Akasaka is to be connected by telegraph-wires with the Telegraph Department, H. E. the Minister of Public Works attended the palace on the 18th instant with a foreign telegraphic engineer, who set up an operating machine within the private apartments.

Friday, 21st.

Judgment was delivered in H. M.'s Court on the 20th instant, in the case of Bradfield *versus* North, the conclusion of which is in the following terms:—"Judgment must therefore be for plaintiff in the sum of $3,000, the amount claimed, and for interest thereon, less the sum of $977.96, and interest admitted to be due from the plaintiff. The parties have in their pleadings fixed the interest at ten per cent. per annum. The order will therefore be that the defendant does pay to the plaintiff the sum of $2,268.30 on the 31st December, instant, together with taxed costs of suit, less the costs of the counterclaim up to the 12th of October."

The *Nichi Nichi Shimbun* and *Hôchi Shimbun* of yesterday contain the following particulars about Korea:—When the King or any member of the Royal family dies, the whole population are by law bound to dress in white for the space of three years, though in some cases the full term of mourning is reduced by a few months. It would therefore be advisable, in the event of the death of one of the Royal family, for Japanese merchants to send white cotton cloth to Korea. Owing to the drought the past year has been one of great scarcity, and numbers have fallen victims to famine. To so great an extent, indeed, that human skeletons are to be found all over the country, and in some instances human bones have been mingled with the bones of cattle and sold as such. Tigers are numerous, and are frequently seen in the spring and autumn. A woman living within four miles of the Japanese factory was carried off only a little time ago, and part of her remains found but a short distance from her place of residence. Gold is obtained from washings, and has been extensively exported. The export of gold was, indeed, forbidden by the Government, but owing to the distress caused by the famine this prohibition has fallen into disuse, and gold is now openly exported. The Korean officials, besides, now fear that any attempt to enforce this prohibitory regulation would lead to complications with the Japanese. During the month of October the value of imports at the port of Fusan was 3,780 *yen*, and of exports 8,635 *yen*. Most of the Japanese resident at Fusan belong to Nagasaki, only one-tenth of their number hailing from Tôkiô.

From the *Hôchi Shimbun.*

On the 17th instant, their Excellencies the German and Italian Ministers and their families were entertained at a dinner at the residence of H. E. Iwakura.

On the 21st instant their Excellencies the Ministers of France and Belgrim will be entertained at dinner at Hamagoten by H. E. Iwakura.

The *Saikio Maru* brought up 120 Satsuma *shizoku*, who are to be tried for complicity in the late rebellion.

Saturday, 22nd.

According to the *Akébono Shimbun*, the Kiôto *Fu* authorities lately requested information from the Finance Department, if banks can be established of which the *kuazoku* and *shizoku* bonds form the capital. The Finance Department replied that such banks could be established, but their authority to issue bank notes would be limited in extent to one-fifth of the value of the bonds forming their capital.

From the *Mainichi Shimbun.*

Mr. Watanabe, the Governor of Fukuoka *ken*, took his passage in the *Hiroshima Maru* on the 20th instant, with the intention of returning to his *Ken*, but on the receipt of a telegram from one of the Government Departments, returned to Tôkiô that same evening.

From the *Chôya Shimbun.*

In Osaka there are 61,323 children now attending the Primary Schools.

From the *Akébono Shimbun.*

H. I. H. Arisugawa-no-Miya, the President, and all the members of, and officials belonging to, the *Genrô-In*, assembled on the 20th instant for the ceremony of closing for the year according to the usual custom.

CHRISTMAS.

OLD FATHER CHRISTMAS is once more at our doors, and though his coming has been heralded by raw and bitter weather in lieu of the genial frosts and warm sun that we are commonly fortunate enough to enjoy at this season, we must not the less extend to him the hearty English welcome which his merry old face asks for and merits In these days of sore struggle for existence, when the mind is constantly on the tenterhooks of suspense, when all feel the present uneasy and the future uncertain, it is difficult to throw off the anxieties of life, even for a day, and the careless abandonment with which our forefathers could enjoy the feasts that lent animation to their less bustling lives is past and gone with them. It has become the fashion, indeed, to rail against Christmas as a dull time of forced enjoyment, and the intrusive insistance with which the vendors of Christmas fare and Christmas goods solicit us to make merry for their advantage rather than for our own, does, perhaps, somewhat tend to check the merriment natural to the season, and to lead us to suspect that we are less spontaneously than conventionally hilarious. But surely it were better to enjoy the good things provided for us without too curiously enquiring into the motives of those who provide them; what matters it how the plums come into the pudding so long as they are there; need the talk round the well laden board be less cheerful because we are told in a hundred ways that the occasion is a cheerful one. Our forefathers were wiser than their descendants; they could let the present absorb them, and, for a space at all events, both forget the disappointments of the past and neglect the doubts of the future, to concern themselves only with pleasant memories and happy anticipations. Modern life does not allow of so complete a withdrawal from the world-struggle, and we must be content to take our pleasure with a grain of sadness. We can meet each other, not determined to be merry, but with our hearts simply open to the influences of the season—the merriment unsought is the surer visitor. No yule log throws its ruddy flicker from our hearths, no *caput apri* is brought with joyous chant and merry gesture into the presence of the assembled guests, no brimming wassail bowl is sent round the expectant circle, but the friendly grasp, the kindly sentiment yet remain to us. Many of those who are dear to us are far away, and the old familiar faces of our childhood cannot greet us here, but the absences are common to us all, and the community should be a bond of sympathy closer to draw the intimacy of friendship. It is a time to bury the hatchet and to forget discords, a birthday of renewed intercourse for those whom mischances of circumstance or temper have thrust apart. It is the feast of good fellowship, for flow of of good humour and interchange of hearty well-wishing, and as such alone and apart from other motives, right worthy of being kept up and honoured. It is an anniversary on which for twenty centuries the hearts of men have been opened to unselfish influences, and the contest of life forgotten in the sympathy of a common humanity. For twenty centuries, say we,—nay, from a hoar antiquity. At this season, from time immemorial, the ancient Latins worshipped the primeval god of their race, the teacher of the arts which raise man above the brute, the old god Saturnus, the Sower. They worshipped him by an entire abandonment to the enjoyment of the fruits of the earth he had taught them to till, to the joys of the social life he had enabled them to know, and at the festival of the Saturnalia all ancient Rome agreed to an absolute suspension of every occupation but that of making merry.

By one terrible blot, but by one only, does this Christmas see the fair face of the world flecked, and even that is illumined, though it be but scantily, by a far gleam of light. The snows of the Balkans are reddened with brave blood; across the wintry winds vibrate the cries of poor weary men wounded to death, sacrificed to the cruel policy of smooth-tongued diplomatists and obstinate fanatics. A sanguinary civil war, fruitful of mistaken heroism, has swept over this land, followed by a terrible plague, and the victims of the savageness of man and nature are to be counted by tens of thousands. None of us will refuse in the midst of our gaiety a regretful tribute to the memory of the multitudes whom war and pestilence have made their prey, or forget to hope that the day may be near when politicians will combat the one with the same ardent devotion and signal success with which the men of science grapple with the other.

But our main business is to let ourselves enjoy the merriment of the season, with an enjoyment tempered by the recollection of the misery so many thousands have endured and are still enduring. Let us strive to throw off the worries of business if only for the day, and our human nature will effect the rest. Friends cannot come together without—be but their minds unpreoccupied—each becoming filled with the added good spirits of the rest. Christmas day is the one day of the year upon which pleasure is a duty, and abandonment to the former involves the discharge of the latter. Much that helps to make a Christmas in England jolly, especially a country Christmas, we cannot have here. The merry drive through the keen air, the joyous rattle over the hard roads through the wintry landscape, the hearty welcome extended to uncles and aunts and pretty or stalwart cousins by the old folk and the shyer young folk, the crowd of familiar faces round the glowing fire and the ample board —all these are pleasures we can only have the memory of and not repeat ten thousand miles from home. No chime of church bells heralds in the merry day, no holly with its sombre green flecked by the bright red of clustered berries can adorn our dwellings, and although we can hang up the mistletoe, there are no bonny country cousins to inveigle beneath it, and let reap from pretty lips the reward, that even the most prudish may sanction, of our craft or daring.

But all these are adjuncts, incidents rather than essentials of Christmas enjoyment. We may be less merry than we might be in the midst of our home circle, but we may fairly enjoy the time if we will but let ourselves taste its pleasures, and we cordially wish our readers a merry Christmas and many a merry one to follow, expressing for the morrow's morrow the wish, so seldom needed in this country, of the sweet singer of 'The Temple'

"Unfold thy face, unmask thy ray,
Shine forth bright sun, double the day,
Let no malignant misty fume,
Nor foggy vapour once presume
To interpose thy perfect sight
This day which makes us love thy light
For ever better."

JAPANESE POLITICAL ECONOMY.

A LITTLE reflection will show that the present popularity among the ruling classes in this country of the balance of trade fallacy, ought in no way to be a matter of wonder. The fallacy, indeed, is far from being extinct even in the chief of commercial countries—England—and in America, commonly put forward as the least trammelled by ancient errors and prejudices among the nations of the earth, meets with still more favour than in Europe. Only a very small proportion of any mercantile community is acquainted with the philosophy of commerce. The daily details of business fatigue and occupy the attention, and little energy and leisure are left to study the broad principles upon which alone the commerce of the world can be, in the long run, successfully carried on in these days of restless progress. The laws of political economy are not rigidly true, but are approximations to the truth, and are liable to constant interruption from unforeseen causes—wars, droughts, floods, unusual harvests and gluts and exhaustions of the market of the world. It is solely with these occasional and temporary phenomena that the ordinary merchant has to deal in making his calculations; only the wealthiest houses can afford to rely upon the eventual operation of the normal laws of commerce to extricate them from the difficulties the fluctuations of human affairs from time to time create. Hence the ordinary merchant busies himself rather with the accidents than with the laws of commercial intercourse, the turns of the market are to him the chief matters of interest, while the financier or the economist, without neglecting the minor events of the commercial world, bases his calculations or his arguments less upon these than upon changes of a deeper character and more permanent nature. It is easy, then, to understand how money came to be regarded as the only real wealth, and how it is that it is still regarded, even in such commercial countries as England and America, by a very considerable proportion of the trading community as the principal element of wealth. In money all gains and losses are estimated, and in ordinary language the wealth of an individual or even of a nation is commonly expressed in monetary terms. The economist who takes a comprehensive survey of commerce, recognises the fact that the flow of wealth in the shape of gold or silver into a country involves a past or future equivalent outflow of wealth in the shape of produce or manufactures from that country, and that the mere increase of the precious metals is no real gain unless it represents a purchasing power greater than what was possessed by the merchandise exported. But by most persons engaged in mercantile pursuits, such general considerations are lost sight of, and the tangible fact of an increase of the article of all most easy to barter for other articles, and in terms of which wealth is familiarly reckoned, is alone dwelt upon. To the individual a mere increase of cash does mean, in many instances, corresponding increase of wealth. It may be given to him or may be earned by his labour, and in both cases is clear gain. If he gets it in exchange for material objects it may or may not be gain, but it at once converts into usable what was only dead or potential capital. Merchandise is often in the hands of the merchant of little more use to him than gold in Saturn, but the moment he converts it into money he can avail himself of it in any part of the world, and what was dead becomes living capital capable of engendering wealth. What wonder, then, if he take money as being not merely one element of wealth but the main element—indeed the only real wealth—and extend the argument from the individual to the state. It is, however, easy to expose the fallacy involved in such an extension, and one of the most wonderful facts in the history of mankind is the pertinacity with which a fallacy, a hundred times demonstrated to be such, is clung to. Such pertinacity, it is true, is common enough in matters of religion, science and philosophy, but in such matters the interest—the pecuniary interest at least—of the individual or the state is hardly concerned, while questions of political economy touch the pockets of all, and must, constantly, be consciously or unconsciously answered in one way or another by merchants and politicians.

Gold and silver, of course, form no part of consumable wealth except so far as they are used in the arts. They simply constitute a means of facilitating barter, and the accumulation of gold and silver in a country beyond its trade-needs, involves not a gain but a loss, save so far as the metals are the produce of its own mines. Nay, even when the precious metals are the produce of its own mines, if they are retained in the country to an extent greater than what is sufficient to subserve its commercial wants, a loss must be suffered, because such a policy involves the conversion of labour into dead capital. People cannot feed, clothe or house themselves with gold and silver, and if a country possesses at any time more of these metals than she wants for her arts and her commerce, the sooner she parts with the surplus for investment abroad, or for the importation of necessaries or even luxuries, the better. The whole question, then, is not whether the money value of the exports should be greater or less than the money value of the imports, but whether the outflow of the precious metals is so great as to hinder the operations of internal and external commerce. If the Japanese export what is worth to them six millions and import what is worth to them ten millions, they are in nowise injured by this apparent excess of imports. We say apparent, because if the exports pay for the imports there is no real excess. Where the imports are paid for partly out of hoards, there may be a real excess, but the excess works no injury to the country, for the hoards must be used to become useful. As a matter of fact, however, the exports must in the long run pay for the imports; hoards can never to any but a very insignificant extent, and for a very short time, be available for foreign trade. But although an excess of imports is *per se* indicative of a profitable trade, if, through such an excess, the stock of precious metals falls below a particular point, a real harm, chiefly to the internal trade of the country, may result, a harm greater, it may be, than the benefit resulting from the imports.

It will perhaps be argued that if it is good for the Japanese to import more money value than they export, it must also be good for foreigners to export from Japan more than they import into the country. But the silk and tea exported by foreigners, when trade is healthy and not ruined by unwise speculation, are worth much more to the foreigner than they are to the Japanese, and together with the other exports, under normal conditions

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

represent in value to the foreigner more than the imports represent to him, but less than the imports represent to the Japanese. Of course this argument does not hold exactly true as between Japan and any particular country, but it is approximately at least, true as between Japan and the rest of the world. In the long run foreigners only sell to Japan what Japan can pay for with her own exports, when trade is healthy to the benefit of all parties, on either side an exchange being effected of their disposable excess of merchandise. Thus it is that commercial intercourse between different countries becomes possible; if the gain were all on one side it would of necessity cease. Thus it is, too, that two countries trading with each other may, indeed if their trade is mutually profitable must, both have an excess of imports in monetary value. The exports of Japan, to take a concrete instance, have a certain value in Japan but a greater value in England. The imports from England have there a certain value, but a greater value in Japan. Hence, what have a less value in Japan than in England purchase what have a less value in England than Japan, and what have a greater value in England than Japan are paid by the latter for what have there a greater value than in England. If what has a certain value in Japan were paid for by what has a less value there, a loss would result to Japan. Yet this is precisely what Japanese editors, apparently with the approval of the Government, are clamouring for.

SPIRIT OF THE JAPANESE PRESS.

Treaty Revision.

(Nichi Nichi Shimbun, December 20th, 1877.)

Ever since the draft of the circular letter respecting Treaty revisions from our Government to the Japanese Ministers at the various Foreign Courts transpired in the *Herald* newspaper, this has been a question much discussed, but as the said draft is still a diplomatic secret, we are unable to inform our readers what progress the negociations have made since then. According to public rumour however, the proposals contained in it refer solely to the right of Customs Taxation, and it manifests an intention of allowing the stipulations of the original Treaties to stand so far as the question of extra territoriality is concerned. We are inclined to believe this rumour, but as we have never seen a complete copy of the draft we cannot speak with certainty on this point. Without reference, however, to special secrets, the public, in discussing the question of the Revision of the Treaties, have assembled about it their sharpest spear-point of argument, and each writer has severally given expression to his own views. There are points of difference among them, it is true, but if we observe the substantial gist of their arguments, it is this. They all agree in being eager to devise means for the restoration of our rights as an independent nation, so that the prestige of this country may be maintained and the preservation of peace and security may be ensured.

This is the position in which the question now stands, and now is the time for us newspaper editors who are the mediums of public opinion to devote our closest attention to it. We shall not fail to bring to our readers' notice any proposal or any opinion which has a bearing upon it.

In listening attentively to the arguments of both natives and foreigners, and noting the differences among them, we observe that for the most part those writers who argue chiefly from principles contend that in this matter of the present revision it is necessary that we should recover at once both our great rights viz: of jurisdiction and taxation, while those whose reasonings are based on facts maintain that in the present revision the best plan is for us to endeavour to recover our right of customs taxation, and to wait until our civil and criminal law is reformed before claiming the restoration of our right of jurisdiction. This difference is not confined to the articles of native writers. We observe that the views of foreigners are distinguishable into two classes in the same way. Judging from present circumstances, however, we think with regret that we must after all confine ourselves [to the results anticipated by the latter class of writers.

Now amongst those writers who are eager to cancel the stipulation of extra territorial rights at the earliest possible moment, some are in favour of adopting a modification of the new Egyptian treaty and establishing mixed Courts; others prefer to imitate an ancient known institution, and to establish Courts of Equity for the trial of all civil cases in which natives and foreigners are concerned. But we have heard that the gentlemen learned in law who were sent by the Government to Egypt for the express purpose of observing the working of the Egyptian Courts have reported that their advantages were equalled by their disadvantages, and that they were unsuitable for adoption in Japan. Again the proposal for the institution of new Courts of Equity has no doubt its advantages, but it is feared that if these Courts were established con-currently with the ordinary Courts there would be a clashing of jurisdictions. We believe that neither of these two proposals has yet been sufficiently discussed, and it is impossible at present to pronounce definitely in favour of either. If both are rejected, what is then to be done?

Again, in regard to the revision of the Tariff, there are some foreigners, who, (though not even they think it unfair) would wish to establish a certain limit, and are averse to transferring entirely to this country the right of custom's taxation. This idea, however, is contrary to natural principles, and as it proceeds from a selfish desire to encroach on the rights of another country, it can never be carried into execution, and if we consider that even among foreigners there are only a very small number who take this view, we see how little is the chance of its adoption. It is manifest that if we except these few, the united opinion of Japanese and foreigners is in favour of the right of customs taxation being restored to Japan in its entirety on the occasion of the present Revision, so that there is no reason for over-anxiety as to the results of the negotiation. Now when this right has been restored to us, what is the next step? No doubt the Import Tariff will be revised, and additional duties imposed. But here the protectionist steps in, and urges that in order to encourage home production, duties of from 50 to 100 per cent. should be imposed on imports until the good effects of protection are visible. Again the advocates of free trade will maintain that although for purpose of revenue an increase of duties is required, these duties should be as light as possible, that even granting that a protective duty might be levied on manufactures, the production of which there is some special reason for stimulating, protective duties in general are inadvisable. There is no sign of these two views becoming harmonized. Which is the more suitable for Japan under present circumstances?

Again in the collection of duties, there are two systems, that of specific, and that of ad valorem duties. In the former case, the duty is levied at so much per catty, or foot, as for instance tobacco which is 3.75 momme per catty, cotton yarn which is 75 momme per picul. Ad valorem duties are levied at so much on the original value of the article, as glass and wines and spirits which pay five per cent. on their original value. Both systems are combined in the present Tariff, specific or ad valorem duties being charged according to the kind of merchandize, but this combination is fruitful of much trouble to the customs officials, and seems inadvisable. Again in the case of specified duties, no note is taken of the quality of the goods, so that articles of fine quality and high price are lucky in being charged a low duty, while coarse and cheap articles on the other hand are subjected to a burdensome tax. Nor is the ad valorem system free from objection. To prevent the customs officials from being deceived by fraudulent invoices furnished them by importers, it is necessary to employ a staff of valuators. When the time comes therefore for the revision, will a system of specific or of ad valorem duties be adopted, or a combination of them retained as at present.

These are questions on which public opinions has not yet formed any definite conclusion, and they seem to be very important points. Another point is strongly urged by some—viz., that foreigners should not be allowed to travel in the interior, and others suggest that in addition to the present entrance and clearance dues, harbour tonnage, and light dues should be imposed. There are questions on which our readers should form an opinion, and we therefore put them forward in order to elicit their views.

PROTECTION.

(Mainichi Shimbun, 17th December.)

Those who have a great liking for all that is foreign, and continue to purchase articles of foreign manufacture, are blind to the consequences of their acts, and cannot for ever continue in the same course. And yet such is the inclination that the Japanese show at the present time.

Again supposing that we decide not to purchase anything that is foreign, but to consume entirely the productions of our own country. That would prevent any increase of our manufactures, and would prove in no way beneficial to the people. Such is the course that China is pursuing to day. The Chinese are endeavoring to manufacture such foreign articles as they find necessary for their use (with the exception of opium,) in order that they may stop importation from other countries. Of the two courses the latter is the better but it is not calculated to increase the development of our resources or tend to the welfare of the people.

It has been for some time our intention to discuss this question which we shall now proceed to do.

Productions may be classed under three heads. The natural productions of a foreign country; the natural productions of our native land, and those productions which are common to both. Now those productions which are grown only in a foreign country should be imported into ours, as any attempt to grow them here would only end in loss, while we should direct all our efforts to increasing the growth of those which are peculiar to our own land. As to those which are common to both countries, their value depends mainly upon the skill displayed in their working up, and therefore each must try and excel the other. The productions of foreign countries which we can use with advantage should therefore be purchased from those countries in such quantities as may be required for our consumption. Those productions peculiar to our own country, which may be in demand abroad, we ought to develope by all means in our power, and promote all industries that may tend to such an end. Then again with regard to those articles which are common to both countries, we should endeavour in every way to excel in their production or manufacture, for here is where real competition is found. Commerce conducted on these principles may be considered as the true mode of trading, and will benefit both foreign countries and ourselves.

But if on the other hand, in accordance with the views of those who wish that all foreign articles should be imitated in Japan, we try and rival the natural productions of foreign countries, we shall find that not only do we incur loss, but that the attainment of the object is an impossibility; while should we decide not to use any articles of foreign production we may certainly keep our money in our own country, but the people generally will be put to much inconvenience. To explain our argument by an example. We know that woollen, cotton and silk goods stand first among the items of trade. Now woollen goods are peculiar to foreign countries, while silk, though produced to some extent in Italy and France, may be said to be peculiar to Japan and China, and year after year we send large quantities to western countries. Now cotton is a staple common to foreign countries and to Japan, and the demand for and value of this article depends upon the skill with which it is manufactured. Woollen goods being the production of foreign countries, and their use being very convenient to our people, there is no reason why we should put any protective duty on them, but permit them to come freely into our country, as it would be absurd to attempt to develope such an industry to any extent among ourselves. Cotton on the other hand being an article common to both countries, and its value and demand depending on the skill with which it is wrought up, we should do our utmost to increase its production in our own country, and check its import from abroad. The silk industry should likewise be encouraged, silk being a native production.

But in case we should act according to the rule laid down by those who say that Japan should be her own manufacturerer, we should be unable to develope even the silk industry, which is a product of our own country, and if on the other hand we were to allow no foreign articles whatever to come into the country, without regarding whether their importation was beneficial or not to Japan, we should not only cause much inconvenience to our countrymen, but check the developement of our own productions, for when imports decrease, exports decrease in about the same proportion, and this cannot be the proper way of carrying on trade.

When we glance at the condition of trade in these various articles, we find that woollen goods hold a high position abroad, while with regard to silk we enjoy only one half the benefits of the industry, as we produce the raw silk and silk worm eggs, and then export them to foreign countries, where they are worked up and developed, that being the part of the work that should be done by ourselves. With regard to cotton goods we find that those of native manufacture are depressed by those imported from foreign countries, and thus we lose the benefits we ought to enjoy from what is one of the staple products of Japan. We thus possess only about one sixth of the benefit which should accrue to us from our own productions. It is no wonder then that our country is poverty stricken.

Now arguing the matter in this manner, the people will see the importance of the question. What we want to prove is that everything should be done to promote the industries of our own land, and exchange the results for the productions of other countries, so that mutual benefit may result, and this is the true principle of trade. If our native manufactures are fully developed by protection, we need have no fear of our goods suffering by competition with those of foreign countries. Thus can we retain our wealth. This is an unanswerable argument.

When we compare the different industries of various countries, we find some in advance of others, and that the country which is at the head in manufacturing controls the markets of all the others. A protective tariff is therefore of the greatest importance to Japan, for supposing even that the manufacturing powers of all other countries is equal, Japan is twenty per cent. below them, and to make up this difference we must have recourse to protection. Such a duty will directly protect our industries and indirectly those of foreign countries, for when the industries of one country are below that of another, a balance is obtained by means of protection, and no trade can last that has lost its balance.

OUT OF BOUNDS:

Being an Account of a Recent Trip into Shinshiu.

(Continued.)

The inn at which I found myself at Matsumoto, supposed to be kept by one Maruta on the Kiunaka Machi, was altogether an extraordinarily conducted establishment. In the first place there was no master, he having died some months previously, and it was accordingly in the hands of five old women who did nothing but sit in the sun in various parts of the lower apartments, unpicking and re-making old dresses. I have said that our welcome was a warm one, but it proceeded entirely from a good looking young fellow, who it, appeared, was an adopted son of the late innkeeper, and had recently come from Tôkiô to wind up the estate. He was engaged to a girl, the daughter of the house, a modest, rather interesting looking young person of fifteen, but with a frightened and melancholy aspect as befitting one who was perpetually being bullied by the five old women, to whom she seemed a perfect slave. She was likewise much given to styes on both eyes, and had a tendency to sore corners to her mouth, which did not add to her cheerfulness of expression.

Then although the room allotted to me on the second story at the back of the house was very clean and had a pleasant out look, I found it was the only habitable guest room. The whole place had been, I imagine, in course of re-erection when the owner died, and had thus been left unfinished. My room was only shut in by paper slides which did not tightly close, so that except for the name of the thing, I might just as well have slept in the open air, all the other rooms on the same floor being free to the four winds of heaven, and only partially protected by a roof. The position of the room was, however, so pleasant, overhanging the clear brawling little river which runs through the town of Matsumoto, and looking over the outer moat of the old castle with its rugged firs and white watch towers on the moss grown wall, and so clean, and—a great point in Japanese inns—sweet smelling, that I determined to remain. I was waited on entirely by the adopted one, a bright, good humoured, wholesome looking youth, whose good will and politeness went far to make up for deficiencies in accommodation and *cuisine*.

In answer to that first question put by all travellers, "When will the bath be ready?" I received answer, that not expecting visitors they had not prepared one, but that if the gentleman did not mind, he—the adopted one—would conduct him to a very good bath house, which would not probably be crowded. The gentleman, willing to go

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

any length rather than lose his evening tub, consented, and in Japanese clothes and on high clogs, set out for the bath, which was about half a mile distant, and at the bottom of an extremely muddy and out of the way alley. I must confess that after I had got in and saw the number of bathers present, I felt very much like returning unwashed, but remembering that clean hot water can do no harm when one is protected by one's own soap and towels, I nerved myself to the ordeal, and made a bolt upstairs, where those who choose to be extravagant to the extent of an extra *tempo* can secure the comfort of dressing and undressing in private in a neat matted room, presided over by a damsel who hands you tea and takes care of your watch and valuables.

A Japanese bath house consists of a wide wooden floor, sloping slightly to a gutter in the centre, which carries off the surplus water and divides the ladies' bathing room from that of the gentlemen. In many bathing houses I believe this constitutes the only division. In the one in which I now found myself, there was a slight bamboo screen which gave about the same privacy as would have been afforded by a piece of tape. In the centre are various wooden cisterns of perfectly clean and almost boiling hotwater, kept constantly filled by a pipe from a large reservoir. At the back, shut in by screens so low that you have to stoop very low to enter these *penetralia*, are two huge cisterns of hot water, where every bather parboils himself for a few moments. At the entrance sits the money taker, who lends a cake of soap to those who choose to pay a few cash extra for its use, while the walls are divided into a number of square boxes where the bathers place their clothes. In the undressing here below there is no privacy whatever, and though the men use one side of the bath house and the women the other there is no further attempt at seclusion. But for all this there is not the slightest violation of decency or propriety, and an unseemly action or remark is an offence unknown. What if a gentlemen does ask a lady on the other side of the gutter to hand him a dipper or a tub, or a lady request a gentleman to pass the soap. Bows and thanks pass between them with as much ceremonious grace as if they were arrayed in the most rigorously proper dress, yet they do not throw off their good breeding with their clothes. A state of undressedness is to the Japanese in the public bathing houses as innocent as the fashion which prevailed in Eden before shame was discovered, and the costume of a Japanese lady at her bath is in a certain sense les objectionable than "the naked truth" of Western ball rooms. I feel it necessary to say a few words on this somewhat delicate subject, inasmuch as one of the supposed great proofs of the immorality of the Japanese which is so often brought forward, is this promiscuous use of bath houses. Surely Japanese might bring forward, were they so inclined, far stronger proofs of western immorality, not the least of which would be our readiness to see evil which really only exists in our own impure minds.

Never have I been more impressed with a sense of the true politeness and innate good breeding of the Japanese, than on this first occasion of a visit to a public bath house. They never permitted the least expression of surprise to escape them with reference to the presence of a foreigner among them. Nor did they apparently pay the slightest attention to me. I had come there to wash, and it was no business of theirs why I had come, as long as I behaved myself, or that my skin was a shade whiter than theirs. I did not, of course, seek to enter the public bath tub which occupied the further recess. In an on quiring spirit I put my head beneath the screen, but was glad enough to withdraw it nearly suffocated with the steam and heat. Outside, abundance of clean hot and cold water, vigorously applied by my servant, gave me as good a tub as I could wish for. It is wonderful how the Japanese can get into such hot baths. I could not bear my hand even for a moment in the water they used, and though I can bear witness to the excellent effects of a fairly hot bath in dispelling the fatigues of a trying day's journey, surely its constant and excessive use must have a weakening effect. I was glad, however to see that some of the younger men followed the foreign plan of a cold douche, which called forth vigorous remonstrances from the ladies if they unexpectedly came in for a share. I may add that I had to make use of this bath house, which was beautifully clean, on the two following evenings of my stay at Matsumoto, as the bath-tub at the inn, like everything else in that mismanaged place, was discovered to be broken beyond repair, and that on each occasion I experienced the same respect and polite disregard of my presence.

In the morning my young host, who devoted himself entirely to my service, only permitting his betrothed to bring what was required as far as the door of my room, insisted on being my guide to the sights of Matsumoto. They are neither great nor numerous. The town is a fairly bustling, lively place, with plenty of good shops where can be found abundant supplies of such European goods as paper collars, slate pencils, comforters, underclothes, soap, cheap scents and little French fancy articles. The principal business of the place, however, consists of cotton and cotton goods, with a certain amount of silk and cocoons, to buy which it was the general impression that I had come. Everywhere on the road, commencing at Kôfu, I had been the object of numberless inquiries as to whether I was not on a silk buying expedition. On my servant's replying in the negative, it was at once decided that I must be diamond hunting. I have omitted to relate that at Kôfu I was waited upon by two venerable Tôkiô gentlemen, who had been for two months searching the mountains for these precious productions. They showed me some of the treasures they had found. One specimen of quartz undoubtedly contained gold in a minute quantity, which they stated had been discovered high up on some distant mountain, to which they promised to guide me if I would give them my opinion as to the possibility of future paying developments. I was compelled, however, to decline, and to further disappoint them by telling them that all their other specimens were absolutely valueless, and that what it pleased them to consider a "diamond" was a very ordinary piece of white crystal. So, after getting me to write down in English the names of all the precious stones that exist, they somewhat saddened left me.

The first wonderful sight which my guide thought fit to take me to visit in our tour round the town, was a well situated in an extremely dirty part of the town, and containing anything but wholesome looking water. It in no way differed from ordinary wells, except that its mouth was of larger circumference, and all my enquiries and those of my servant failed to elicit any other information than that it was "a famous well." Why famous, or what are its special qualities I am to this day entirely ignorant. Then we visited some old and not particularly interesting temples, and then it was time for lunch. My experience of the cooking at the inn was already such as warranted me in taking my meals elsewhere, and accordingly at the most famous *unagiya*, or eel pie shop in Matsumoto, we regaled ourselves. With Lady Jane I could say

> "Eels a many I've ate; but any
> "So good ne'er tasted before.
> "(They 're a dish too of which I'm remarkably fond)."

And for them Matsumoto is specially famous. Neither elsewhere have I ever eaten rice that was so perfectly prepared. The price was, however, in proportion to the excellence. After tiffin we visited the old castle, which would well repay all students of Japanese history for a visit. The residence of the *Daimio* has been destroyed, but the fighting tower remains as it was in the days of its grandeur; also most of the other buildings, though they are gradually falling into decay. It required but little imagination to people the tottering *yashikis*, with the rotting mats still lying on their broken floors, and the moss grown walks strewed with the bright fallen leaves of autumn, with the haughty vassals of a proud Lord, while without pretending to undue sentiment, he who knows somewhat of the former times, may find plenty of food for thought and conjure up many a picture of dead and gone events as he sits in the top room of the seven storied strong old fighting tower. Below are the dark-tiled, dolphin-crested roofs, and the deserted gardens of the castle, with its neglected shrubberies, its fiery crimson maples, and grey stone walls overgrown with many coloured creepers, over which the wind-beaten firs stretch their crooked arms to reach the glassy waters of the moat. From the loop holes on each of the four sides, guarded with their heavy iron-bound slides, and from the arrow slits with

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

their metal doors, one beholds a lovely panorama, including the town of Matsumoto, with its neat white plastered godowns gleaming amid the plantations of mulberry and groves of *sugi*, while far away into the blue distance stretches the fertile plain, the domain of the former lords of the deserted castle, bounded by towering snow capped mountains. How solid, too, the beams and flooring of this old tower, which one can well imagine resounding with the tramp of the warriors as they mount the well worn steep stairs. There, too, is the gate and doorway as massive and strong as in the feudal days, and there even remain the very names, written by their own hands on the spear rack which stands at the entrance, of those who have shared the fate of feudalism. It is a ghostly, gloomy impressive old place, and one of the very few of these ancient landmarks of history remaining in so perfect a condition.

In the evening I walked to the little village of Asama, distant one *ri* from Matsumoto, where there are a number of hot springs. I could not discover that they had any single source, but apparently gush out of the ground in many places. The water is very hot and tasteless, but I could detect a very faint odour of sulphur. The little village is full of public baths, open free to everyone which as usual seemed to be well patronised. Indeed, at all places where hot springs abound in Japan, I have ever failed to discover that the inhabitants of the place follow any pursuit beside that of sitting in the bath with their visitors. The next day I devoted to seeing the schools, which are very extensive buildings, one for boys and girls having, I was informed by an official, about fifteen hundred pupils. It was of the usual order of architecture but evidently much more solidly constructed than other buildings that I have seen of similar character. It is two stories high, with lofty central tower, and stands in a large and very neatly kept court, enclosed by a high well built railing. The portico is very wonderful, being surmounted by two large and remarkably chubby cupids, evidently copies of those attached to the cheap coloured prints so largely sold in Tôkiô, and like them holding a scroll on which is written the name of the school. The other school is smaller but built in far better taste, and is, I was told, used by the higher classes. Also in some of the outer buildings of the old castle, there are about three hundred students, so that Matsumoto has no lack of educational advantages. I judged it to be a town rather larger than Kôfu, but although anything but a dull place, it retains more of the old time look, and there are fewer signs of foreign innovations, which may be accounted for by the singular freedom from fires that it has enjoyed. The rest of the daylight I devoted to sketching the old castle, and then, as it turned out a pouring wet night and I was unwilling to go out to seek a dinner, I determined to cook my own, the old women, aided by the adopted one and his betrothed failing to produce anything more tempting than some fishy warm water which they termed soup, some slices of *daikon* garnished with pickled turnip tops, and cold rice. It was with much trouble that the materials for the feast could be collected. For nearly three quarters of an hour did I have to wait for a small quantity of white sugar, which delay was—my servant either truthfully or sarcastically explained—caused by my not accompanying the order with the ten cents necessary to pay for it; an omission on my part which necessitated one of the old women going to the pawn shop with one of her gowns in order to raise the requisite funds. But after long delay, I managed to get some extremely tough beef, which I made into a native stew, and also to concoct what I at first intended should be an omelette, but which for certain reasons after I had turned it out I thought better to call a pancake, as it obstinately refused to rise, and gradually assumed the consistency of sole leather. These dishes, supplemented by large quantities of *matsutaki*, furnished an abundant if not degistible meal. My youthful host, who to my secret annoyance would remain while I played *Soyer* in this very amateur manner, largely diminished the amount of beef in my stew, by continually partaking of portions under pretence of seeing if it were done. The well known perversity and evil mindedness of pots and pans declared themselves as usual by boiling over when wanted to simmer, and by growing suddenly stone cold if taken off the fire for a moment, also in burning and scalding fingers on the least provocation and creating in the mind of the cook an almost irrepressible desire to shy everything out of the window, and after anathematizing all persons alike guilty and innocent, to go sulky and supperless to bed. Under the circumstances, I consider that I achieved a grand success over my temper and my materials, and though my servant admitted that he perferred Japanese cookery, he hastened to assure me that my gastronomical attempts were "*makoto-ni umai.*"

In the evening came to my room unannounced numbers of unknown, but perfectly polite gentlemen, all with the same questions about mining and diamond hunting. It was in vain that I told them that I was not in search of a New Eldorado; that I did not expect to pick up a Koh-i-noor. My protestations were useless. If I was not after silk what was I after, if not diamonds? Was I a merchant? No. Was I a naval or a military man? No. Was I a *yakunin?* No. Then why should I go into the heart of the mountains in cold weather, if it was not to spy out the mineral wealth or look for deposits of precious stones. Once more had I to inspect and pass my opinion on all kinds of worthless bits of mineral. Again and again did I tell them the names and colours of all precious stones. I had to tax my memory (and burden my conscience) with statements about the largest diamonds in the world, their weight and value, and to my astonishment found that they were in no way comparable to one that had recently been found somewhere in Shinshiu, no one could positively say where, and sent to Tôkiô for valuation. This apocryphal story I had first listened to at Kôfu, and here it was again with many variations. The facts as given were somewhat vague, but there was no doubt in the mind of any one present that such a magnificent diamond had been discovered, and taking my statement about the Koh-i-noor as a basis for valuation, there was a unanimously expressed belief that the lucky finder of this star of Japan "would be ten times as rich as Mitsui."

They would not go, these guests of mine. I stood them *saké* all round several times and they seemed firmer fixed than ever. Nay, fresh arrivals kept coming in, announcing themselves with the most respectful of bows and the politest of salutations, and adding to the thick cloud of tobacco smoke which almost hid their presence from me, and through which the candles shone blue and dim. There was no retreat possible on my part, until at last about half-past eleven, regardless of good manners, I endeavoured to give a broad hint that I was tired of delivering lectures on Brazilian and South African diamond fields, by appearing to become deeply absorbed in the Globe edition of Shakespear, which, with a Japanese dictionary, constituted my travelling library. Short sighted being that I was, this brought on me a fresh volley of questions. "What honoured book was that?"

"The book of a famous English writer."

"Although it was indeed impolite, on what subjects did he write?"

"Well, dramatic pieces—*jorori*—and plays for acting."

"And how did English actors behave, and what voice did they assume, and if not too troublesome would I give a specimen of acting? Ah, if I only please would consent. Yes, my servant said I often acted at the English theatre in Yokohama with other gentlemen; would I not gratify them now?"

It was in vain that I expressed my dislike to raise my voice and indulge in such gestures as acting would compel me to use. No refusal or apology was listened to, until at last in despair of ever having any peace, I grasped a broad bladed cooking knife that lay on the floor, and siezing the Japanese nearest to me, I threw him down or a pile of quilts and mattrasses, while, flourishing over him the dreadful weapon, with rolling eyes and horrid guttural growls, accompanied by a demonstration of rage that would have put to shame Macready in his wildest moods, I thundered out the words that first caught my eye:—

"Liaro r.r.r. and slave...er!
* * * if thou speakes't false
Upon the next tr.r.r.ree shalt thou hang alive...er
Till famine cling thee."

I had never bargained for the sensation I caused. The house literally rose at me, for away went paper slides and over went the candlesticks as my frightened audience disappeared in every direction.

The unfortunate victim of my fury happened to be my host, and as soon as I released him, he threw himself into such an abject attitude of entreaty that my strength left me, and I was so overcome with the emotions caused by the scene that I could for some time offer no explanation. Of course it ended in my calling them all back,—though some came tremblingly—and standing some more *saké*. But I had only to begin to roll my eyes and growl to cause anxious looks to be turned to the staircase, and whilst they thanked me for the entertainment I had afforded them, they expressed a strong wish that I would refrain from giving any more examples of tragic acting.

So we kept dreadful hours, and I foresaw that my setting out the next morning would be late in consequence.

CHAPTERS OF JAPANESE HISTORY.

The Suspended Ceiling.

It happened in the days of the second Shôgun Hidetada, a son of Iyeyasu the great founder of the Tokugawa dynasty, who was enjoying the peace and prosperity so dearly won by that great general and noble statesman. Such was the tranquillity of the country after nearly a century of bloody strife and national disorder, that, as the Japanese saying is, "there was no breath to stir a ripple." The event now to be related is the only one that occurred to trouble the peaceful reign of Hidetada.

Now the Shôgun loved his younger son Tadanaga far better than his firstborn Iyemitsu, and was desirous of making him his heir. Many of his officers and retainers, divining their Lord's wishes, upheld him in his opinion and frequently advised him to act according to his inclination. But Hidetada possessed sufficient judgment to see that it would be imprudent to set aside the just claims of his eldest son, and that besides being a violation of the rights of family, and of the expressed will of the great Iyeyasu, it would inevitably lead to trouble. He thus put aside his desire, and in the 9th year of Genwa (1623) he abdicated in favour of his eldest son Iyemitsu. It may be here remarked that the great qualities of his grandfather seem to have descended to Iyemitsu, who proved himself a worthy successor of the first Shôgun, none of his successors having surpassed him in statesmanship and general administrative ability. At the same time the favourite son of the ex-Shôgun Hidetada was sent to the castle of Sumpu, and created lord over the greater part of the province of Suruga, (thenceforth called Suruga Dainazon) Kodzuke-no-suke Masadzumi, the *daimio* of Utsunomiya, and Hiraiwa Kadzui-no-kami Chikayoshi, the *daimio* of Gunnai, both of whom, and especially the latter, had rendered great services to Iyeyasu, being appointed his guardians.

Now a certain officer named Honda, who either from a special liking for the young Prince Tadanaga whose guardian he had formerly been, or more probably from a wish to obtain influence in the Bakufu by ingratiating himself with both the ex-Shôgun and Tadanaga, had been one of the most prominent among those who had urged Hidetada to make Tadanaga his succesor, grew daily more anxious to carry his wishes into effect. So intensely did his heart burn with this desire that he would allow no consideration to restrain him from carrying out his plan, and seeing no other way of accomplishing his purpose, he determined to attempt the life of Iyemitsu, even if the plot should end in his own destruction and the ruin of his family.

Honda commenced by disclosing his plan to a friend Hirasawa. Now this Hirasawa was a man into whose soul no thought of treachery had ever entered, and who had always been noted for his devotion to the House of Tokugawa; but such was the influence of the arguments brought forward by Honda that he finally promised his aid in the carrying out of the scheme. The next step was to persuade Torii Sakiô-no-suke Sadatsune, the *doimio* of Yamagata in Dewa, to join in the conspiracy. As all these were men who had rendered such great and faithful services to the Tokugawa cause, their loyalty was entirely unsuspected by the Shôgun or by any members of the Bakufu.

Years rolled on, and no fitting opportunity presented itself for the carrying out of their cherished plans, until in the 4th month of the 8th year of Kanyei (1636) it was reported that the Shôgun was about to leave Yedo and proceed to Nikkô pay a visit to the tomb of his grandfather Iyeyasu. Hirasawa at once communicated with Honda and pointed out that at last the time was come for the accomplishment of their scheme. Honda then said, "I have long pondered over certain measures, which if adopted, will, I am confident, ensure success. Hirasawa replied that he, too, had formed a plan, which was to invite the Shôgun to pay a visit to Honda's castle in Utsunomiya, during his journey to Nikkô.

This, it appears, was the very course Honda had determined upon adopting, and which they mutually agreed to follow. It was therefore arranged that Honda should proceed at once to Yedo, and thence to Utsunomiya to make the necessary preparations, while Hiraiwa managed affairs in Sumpu. Honda therefore set out for the capital of the Shôgun, and procuring an interview with him, stated that he was on a visit to his castle at Utsunomiya, and hearing that His Highness was about to procede to Nikkô, begged that he would honour him by a visit, Utsunomiya being half way to the Sacred Mountain. The Shôgun, with no suspicion that in these tranquil times any plot was laid against his life, gave a favourable reply and accepted the invitation. Honda then taking his leave, proceeded with all haste to his castle. On arriving he assembled all his chief retainers and laid his plans before them. After deep consultation, it was decided that a room, set apart for the use of the Shôgun, should be constructed with a false ceiling suspended by ropes and weighted with heavy stones, arranged in such a manner that on cutting the ropes the whole mass should fall and crush the Shôgun beneath it.

To construct this diabolic apparatus all the most skilful carpenters in Utsunomiya were engaged, one of Honda's most trusted retainers, by name Kawamura Yukiiye, being appointed to superintend the work. By him Honda was strongly advised not to content himself with the death of the Shôgun, but to take measures that would ensure the certain destruction of all the powerful nobles and retainers who would accompany him to Nikkô, such as the Regent, Ii-kamon-no-kami and the rest, "For" said he, "if only the Shôgun be slain the Bakufu authorities may be induced to send such a force against you as shall sweep away you and all your house." Honda, however, refused to lend himself to such a scheme of wholesale murder, saying that if Iyemitsu was killed the only one that could succeed him was Tadanaga, and that as long as this, the sole wish of his heart was accomplished, he cared not what might happen to him or his House. He further added that he did not compass the death of the Shôgun from any feeling of hatred to his person or his Government, but solely from the respect and love he bore Tadanaga.

In the course of a short time a beautifully fitted bathroom, with a death-bearing ceiling, was completed, and Honda daily awaited the arrival of the Shôgun. The carpenters engaged on the work had never been permitted on any pretence whatever to step outside the castle gates, and now that their work was finished they were ordered to remain in the castle until after the arrival of the Shôgun. They wonderingly accepted their imprisonment, which was made to them as light as possible, as they were well cared for and feasted each day on the best of everything. Now among the carpenters who had been employed on the treacherous work, was a handsome young fellow named Yotaro, who was in love with the daughter of a wealthy man named Joyemon, who lived in the same village of Shiwomura but a short distance from Utsunomiya. This girl, who was as clever and accomplished as she was beautiful, had been brought up surrounded by every luxury, and her father, a wealthy and proud man, was in no way inclined to give her in marriage to an ordinary mechanic. Yotaro had therefore promised his love that he would work with the utmost industry at his trade, and thus place himself in such a position that her father could no longer refuse his consent to their marriage.

Now Yotaro having finished work at the castle, chafed against the detention, which prevented him from seeing her to whom all his heart was devoted. At last, unable

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

any longer to control his impatience, he went to the gatekeepers and implored them to allow him to leave the castle, promising to return in a short time, The gatekeepers, notwithstanding the strict orders they had received to let no one go out from the castle, could not resist his entreaties, for his good looks and joyous temper made him a favourite with all, and his reputation for trustworthiness was well known. They therefore allowed him secretly to leave the castle, and he at once made his way in all haste to the dwelling of his future bride. After the first delighted greeting was over, in answer to her enquiries he told the maiden all that had transpired at the castle, and the nature of the work on which he and his fellow workmen had been engaged; also how strict orders had been given that no one should pass the outer gates until after the arrival of the Shôgun, and that he had only succeeded in getting away by stealth and must return at once before his absence could be discovered.

But at the castle, during Yotaro's absence, it happened unluckily that Kawamura called a muster of all the workmen, and finding, Yotaro missing demanded the cause of his absence. When he learned that he had left the Castle and gone to a neighbouring village he was furious, and fearing lest any hint of the plot should be disclosed, he at once gave orders for the execution of the unhappy carpenters, which order was immediately executed, and when poor Yotaro returned in all haste to the castle from his stolen interview, it was only to meet the same cruel fate as his unfortunate companions.

Now one of the gatekeepers of the castle, becoming alarmed at orders given for the execution of the unhappy carpenters, whose lot he feared he might perhaps be called upon to share, secretly deserted his post, and not knowing that it had been carried out, went to the families of the murdered men and informed them of the approaching fate of their relatives. The latter, grieved beyond measure at the intelligence and being yet in doubt if so cruel a command would actually be carried into effect, made their way in a body to the castle, petitioning for the lives of their fathers or husbands or brothers or sons, on whom they depended for their support. Kawamura, on being informed of their arrival, ordered them to be brought into his presence, and there informed them that the crime committed by the workmen was unpardonable, inasmuch as they had broken into the storehouse and stolen the treasures kept within. He further told them that although the sentence had not yet been carried into effect, owing to the anticipated arrival of the Shôgun, the criminals would certainly be put to death as soon as His Highness had departed. So, filled with grief, the families of the workmen had to return to their desolate homes.

When Joyemon's daughter heard of the fate that had befallen her lover, she was maddened with grief and refused all comfort, weeping incessantly. And thus did she reason:—Yotaro is a man to whom the idea of stealing would never have occurred. The tale is false, and in all this tragedy is some deep mystery concealed. Then she remembered the tale of the bath room with its cunningly contrived ceiling, which she had heard from her lover when he secretly visited her so few short hours before his death. So writing a letter with all the particulars which she could call to mind, and stating that without her lover life was worthless, she stabbed herself and died. This letter her grief-stricken father found by the side of her body, and having read, determined on revenge. With this view he set out to disclose the whole plot, and thus cause the destruction of his lord Honda, whose scheming had brought about all this wretchedness.

On the 13th of the fourth month the Shôgun left Yedo, and by the seventeenth, the day that Joyemon had discovered the letter, was close to Utsunomiya. Ii-kamon-no-kami, who rode in advance of the procession, had advanced as far as Honda's castle gates, when Joyemon approached him and requested him to grant an immediate interview, stating that he had a matter of the gravest importance to communicate. His request was granted, and Joyemon showed his daughter's letter and stated his suspicion. At first Kamon-no-kami did not believe the tale, but being a sagacious man, he deemed it advisable to be on his guard lest the Shôgun should be allowed to fall into a trap. Thanking his informant therefore, he at once decided on his mode of procedure, and gave orders to his retainers by means of which the plot, if any existed, should be evaded. What his plans were will be presently related.

At this juncture Honda came out of the castle and proffered a welcome to Kamon-no-kami. And now it seemed as if everything was about to favour the fulfilment of his wicked plan.

By this time the Shôgun had arrived at Ishibashi, which is distant only about two leagues from Utsunomiya, and was proceeding or his way, when a messenger arrived suddenly from Yedo, bearing a letter from the council stating that the ex-Shôgun Hidetada had been suddenly siezed with a dangerous illness, and requesting that His Highness would return immediately and attend his father.

His Highness, greatly surprised at the receipt of such intelligence, desired Kamon-no-kami to attend him at once, and on his arrival with Honda, the Shôgun handed him the communication which, as he supposed, had just been sent to him from Yedo. Kamon-no-kami, on reading the letter, which he had himself composed and caused to be written, advised the Shôgun to return without loss of time, urging that he could at any time visit the tombs at Nikkô, or even send a deputy to present his offerings, but that it was imperative upon him to be present at what might prove to be the death-bed of his father. Then turning to Honda, he told him how keen was the Shôgun's regret that by the occurrence of such an outward circumstance he should be deprived of the pleasure of enjoying his hospitality, after all the preparations that he had made at his castle for the reception of His Highness. He, however, begged that he would accompany him on his return journey to Yedo. Honda was in despair at this unlooked for failure of his plans, but concealing his disappointment, he promised to accept the Shôgun's invitation, and returned to his castle.

One of the attendants of the Shôgun, named Itakura, was appointed to act as the deputy of the Shôgun, and to proceed to Nikkô to present prayers and offerings. The real intention of his journey, however, was that in accordance with Kamon-no-kami's secret instructions he might stop by the way at Honda's castle, and try and find out something of the suspected plot. In the mean time Kamon-no-kami had relieved the mind of the Shôgun from its anxiety respecting his father's condition, by privately informing him that the letter was false, and why it had been written. It was then suggested that His Highness should remain at Ishibashi for that night, and set out on his return to Yedo the following morning. But Ishikawa Hachiyemon, one of the advisers of the Shôgun, disapproved of the Shôgun remaining even one night at Ishibashi, saying that a man like Honda, who was capable of concocting so deep laid a plot, might not hesitate to make an immediate and open attack, and that it would be better that His Highness should set out secretly without delay, leaving his escort to follow in the morning. Adopting this advice, Kamon-no-kami said that he would immedately send on one Matsudaira Echizen-no-kami to announce in Yedo that the Shôgun would leave Ishibashi early on the following morning, so that necessary preparations might be made for his reception. But actually the Shôgun took his place in Matsudaira's *kago*, and with a small guard commanded by Ishikawa started at midnight for Yedo, while Matsudaira was to take his place in the morning in the *kago* of the Shôgun. This fact was kept secret from all members of the escort except Ishikawa.

Now Ishikawa, who was a man of immense strength, made the *kago* bearers run with all speed, not even allowing them time to take their food. They managed to keep up until noon of the next day, when all had given in exhausted but one. Ishikawa himself therefore took the pole in front and carried the *kago* for two hours, by which time they had advanced as far as Kuri, when the man who had hold of the hinder end of the pole could go no further. Ishikawa, then pulling the pole well forward, hoisted the *kago* on his shoulder, and thus carried it until seven o'clock in the evening, where he arrived at the great gate of the Shôgun's palace at Yedo. When he announced the return of the Shôgun, and demanded admittance, the gatekeepers went to Matsudaira Idzu-no-kami who had command of the palace during the Shôgun's absence, and asked him whether they should open the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

gate, but he replied that he had no knowledge of the return of the Shôgun, and that the great gate could by no means be opened at night. This refusal so enraged Ishikawa, that with the pole of the *kago* he broke open the small side gate, and would have forced an entrance, but the men on guard threatened to kill him if he used further force. Fearing, therefore, that in the scuffle which might arise if he persisted in his attempt that the Shôgun might receive some injury, he took the *kago* round to one of the gates in the rear of the palace, and there managed to obtain admission, and as soon as the Shôgun got out of the *kago* he was at once recognised, all the people in the palace being greatly surprised at his unannounced return. The following day Matsudaira Echizen-no-kami arrived with the Shôgun's train, and entered the palace in great magnificence accompanied by all the high officials.

Itakura, the deputy sent to Nikkô, very soon returned, having received unmistakable proofs that the plot had actually been laid, and that it had for its object the raising of Tadanaga to the Shôgunate. He had also ascertained that Torii, the Daimio of Yamagata, was an accomplice with Honda. On learning these facts Ii Kamon-no-kami immediately issued orders to Honda to collect his forces and proceed to chastise Torii, who had been detected in a traitorous plot against the life of the Shôgun, at the same time issuing similar orders to Torii with respect to Honda. At the same time he sent Ukio-no-suke Shigenaga, at the head of three hundred men, to lie in wait for both Honda and Torii, at a place between the towns of Utsunomiya and Yamagata.

Honda had no alternative but to obey the orders of the Bakufu, but feeling sure that Torii would offer him no resistance, he set out at the head of only a few men for Yamagata, not to attack Torii, but to hold a consultation with him, and if possible arrange some means for breaking out into open rebellion against the Shôgun. Torii, believing the same of Honda, had started out from Yamagata with similar intentions when they were both captured on the road by Ando and brought prisoners to Yedo, where they were confined in the *yashiki* of Kamon-no-kami.

On examination it was found that Torii, although an accomplice, had taken no active part in the plot. He was therefore ordered to be kept in confinement, and although his estates and title were forfeited, his son was granted an estate of considerable extent at Nibu in Shimotsuke. Honda, traitor though he had proved himself, was, not disgraced by the sword of the executioner, but was permitted to perform *seppuku*. His family were, however, degraded, and his retainers punished according to the part they had taken in the plot. The other accomplices, Hiraiwa and Sadanaga, both committed suicide when they heard that the plot was discovered.

The case of Ishikawa Hacheyimon presented great difficulties. Although he had rendered excellent service to the Shôgun, by bringing him to Yedo in safety, yet the crime that he had committed in attempting to force an entrance into the palace was unpardonable. He was therefore banished to a small island at the mouth of the Sumida-gawa, still known by the name of Ishikawa-jima. but was afterwards rewarded with an estate of four hundred *koku* per year.

We understand that Mr Kwok A-cheong is to become the purchaser of the P. and O. S. S. *Bombay*, the purchase-money is said to be $30,000. She will be fitted with new boilers by the West Point Foundry and have a thorough overhauling.—*China Mail.*

A telegram from New York arrived last night announcing the arrival of the *Glenartney* on the 5th instant, fifty-two days from Shanghai, including stoppages at Amoy, Singapore, etc. We believe this is the fastest run that has been made from here to New York. The *Loudoun Castle's* time is sixty or sixty-one days, of which five days were lost at Singapore owing to an accident, but even with this the *Glen's* time is the best.—*Shanghai Courier.*

The charges by Mr. Myers late U.S. Consul-General at Shanghai, against Mr. Seward the U.S. Minister to Peking, have, we are informed, been formally drawn up, and placed in the hands of Mr. W. M Springer of Illinois, who was to present them at the earliest day possible and ask for an investigation. It is probable the Committee on Foreign Affairs will be directed to deal with them.—*Shanghai Courier.*

QUID PRO QUO.

No. 2.

To the Editor of the "Japan Weekly Mail."

Tôkiô, 15th December, 1877.

Sir.—You together with the Editor of the ***Japan Daily Herald***, seem to think that the argument in favour of the independent right of Japan to regulate her own import tariff, and to cleim a *quid pro quo* for each and privilege which she grants to other nations; is somewhat invalidated by the simple mistake of enumeration dutiable imports into Great Britain made in the ***Nichi Nichi Shimbun***, and which the Editor of the ***Mail*** wrongfully thinks we have followed in our letter of the 7th instant published in his paper of the 8th.

But we would now inform you our learned opponents that we do not rest our arguments, upon any such slender foundation, but that the point is rather that the British Government claims and exercises the right to lay imposts upon goods imported into that country, to make those duties heavy or light, or to admit certain articles free of duty, in the free and independent exercise of the national sovereignty, as shall seem to them best to conduce to their own domestic interests, without any regard for the advantage or disadvantage of any foreign nation.

If the Government of Great Britain believed that British trade would be benefited thereby, it would not hesitate for one moment to put a high duty upon silk as it now does upon Tobacco, Spirits, Tea etc.

Great Britain in making treaties with other powers does not resign its own interest, and advantages in favour of other nations, without a *quid pro quo*, and that was the real points of the argument in the "***Nichi Nichi Shimbun.***"

But in our article of the 7th instant, published in the *Japan Weekly Mail*, of the 8th we did not speak of our silk and tea as imported into ***Great Britain***, but we said "Our silk and tea, when imported" into ***Europe***, pay far heavier duties," etc.

And considerable quantities of our teas do find their way into some parts of Europe, and our silk but little of it goes to Great Britain where it is duty free, but the great bulk of it goes to other European countries where it does pay high import duties. So we were quite accurate in our facts after all, the Editor of the ***Japan Weekly Mail*** to the contrary notwithstanding.

And as in commercial treaties we cannot well be expected to discriminate in favour of Great Britain against France, Italy and other Continental European countries, therefore, in the consideration of questions of national sovereignty, and of reciprocity, when we find one nation imposing high tariffs upon our tobacco, tea and wines, and another nation fixing a high tax upon our silks, we are compelled to include all in one when we come to consider what taxes we shall levy foreign goods imported into our country. If Great Britain persuade our in any way induce France and Italy and other countries to admit our silk and rice duty free, and France or Italy can induce Great Britain to admit our Tobacco Saké and tea free of duty, then it will be time for us to consider what *quid pro quo* we can give to them in return. But while all these Sovereign states exercise their independent rights to foster and protect their own domestic interests regardless of our interests or advantages, we must insist upon the justice of our claims to the same free exercise of our national sovereignty for the protection and advancement of our own domestic interests. No brave Briton would stand by and see a slave or a prisoner who was bound hand and foot, attacked and brutaly beaten by some merciless ruffian. When a fight begins amongst British Coolies, how quickly they form a ring and cry out, "stand back"! "One at a time"!! "Fair play,"!!! But

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

still even British Statesmen and Diplomatic agents constantly endeavour to bind our nation fast, hand and foot, and then allow the whole world to attack us at once in the great commercial strife, in which all others beside ourselves are quite free of hand and limb to buffet us as they please !!!

No! No!! Messrs. *Mail* and *Herald*, we will not allow you to raise a dust about some trifling error of words, with which to blind us, and so hide from our view the real point of our argument ;

In the days of "Old Japan," when the eyes of our people were but half open as they were just begining to arouse themselves after long centuries of sleep, your national representatives often succeeded in leading us away from the real point at issue, as well as in frightening and bullying us into false positions, by which you gained your own selfish ends to our great sorrow ! But now a broader light has dawned upon us, and "New Japan" can no longer be frightened with twilight ghosts and hobgoblins and made to run away while you gather up the golden "Kobans" and all our other treasures and fly off like birds of prey over the sea with your ill-gotten gains ! ! Our people no longer lie in wait to shed noble British blood for which you used to demand such a high price and for which we were compelled to pay such heavy indemnities ! ! We now see more clearly our own rights and the proper means of protecting them ! We now mean to treat you all as men like ourselves, and not as either gods or devils, and we expect from you reciprocity and equality of international rights and privileges !

Your Home Government cannot assert the right or the power to regulate the tariffs upon the trade of its colonies. Each one of the Colonial Governments claims and exercise these rights for itself, as we see in Canada, the West Indies Australia, India and other dependencies of the British crown, where the tariffs are as various as the names and localities of the several colonies. This being the case with your own Home Government and its dependencies, with what face then do you come to this Empire of the Eastern Sea and demand of us that we shall disregard our own domestic interests for your sakes ?

We think any one who can boldly make such unreasonable demands, and persist in trying to support them with all kinds of sophistry without a single blush, must indeed have faces of brass, or hearts of stone ! In your little British Islands you cunningly manage to admit duty free such foreign products as you need in your own domestic manufactures, but upon such foreign goods as you know your people will have even though they be heavily taxed you put on a great duty and so you manage with shrewdness to raise nearly as much duty under the banner of "*Free Trade*" as the United States is able to raise under a *Protective Tariff!*" We do not find fault with you for this, but we think it will serve us as a good precedent, helping us to lay claim to a like free exercise of our own sovereign rights, in the fostering and protection of our own domestic interests.

If you come to us with sincere and generous offers, to give us a fair *quid pro quo* for what you wish to get from us, we shall be most happy to listen to your proposals, but if you come demanding great concessions for which you are willing to give little or nothing in return, we must say as we have said before, "emphaticaly No !" to all such unfair and unreasonable offers. Our people have a saying "*Go-bu, Go-bu,*" which means half and half, or, an equal division, or in other words *quid pro quo*, and we beg of you to study these words earnestly for a while, and see if you cannot find in them an equal applicability to Japan, as that which you suppose them to have for Western nations !

And believe me,
Yours reciprocally now
and forever mistaken,
RENAISANCE DU JAPON.

[We can vouch for the genuineness of the above letter which at first sight reads like a cruel joke at the expense of this country. But our Correspondent must refrain from personalities, and above all must practise the supreme virtue of brevity.—ED. *J.W.M.*]

INQUEST.

Tokio, 19th December, 1877.

Before H. S. WILKINSON, Esq., *Coroner*,
and
W. B. MASON,
G. E. GREGORY,
J. CROSBY,
} *Jurors.*

An Inquest was held this day at the Tsukiji Hotel touching the death of F. C. Hayes.

J. Hall, of Tsukiji, deposed.—I happened to be standing at the front door of Mr Hayes' house yesterday afternoon at about five minutes to 5. I was talking to a Japanese about private business, when a Japanese boy came out of Mr Hayes' house and asked me to go upstairs, as his master was lying in bed all covered over with blood. I went into the hotel and asked Mrs Blockley's brother, Mr Allman, to go upstairs with me. When we got into his bedroom, we found three Japanese boys there and Mr Hayes lying in bed all covered with blood. When I saw him he was still alive. I came downstairs and ran out for Dr Faulds, who at once came over with me, and we went up to Mr Hayes' bedroom together. After remaining in the room a short time with Dr Faulds, he asked me if I would be good enough to fetch Dr Manning, who lived at Takanawa. I did not get back until about a quarter past seven, so I was not present when Mr Hayes died.

By a Juror :—I saw a revolver lying on a chest near the bed. I suppose the boy put it there. Mr Hayes did not speak to me. He was breathing with difficulty. I was in the Yedo Hotel about 10 minutes before the boy called me. I did not hear the report of the revolver. The boys went up before I did.

By the Coroner :—It must have taken place while I was in the Hotel. The room was full of smoke. I went to call Mrs Blockley and her brother before going upstairs to see Mr Hayes.

By a Juror:—I did not ask the boys whether they were present when Mr Hayes shot himself. They did not tell me so. Two boys were at the bottom of the stairs. I did not clearly understand what they meant at first, so asked again of the cook, and on learning the state of the case I went up. I do not know whether Mr Hayes was alone or not when he shot himself. I did not see the revolver until Dr Faulds came.

Tomojiro Hatsushiba, cautioned to speak the truth, said : I am a native of Obamamura, Hizen. I was employed as Mr Hayes' servant. My master's illness commenced on the 10th of this month. He has throughout ate but little. On the 11th he was able to get up, but since then he has been obliged to keep his bed. His illness seemed to be of the character of diarrhœa. A Japanese doctor came about half past one o'clock one day. He was the doctor that lives just beyond the Seiyoken Hall and is called Kumogawa. On the 14th or 15th, I cannot exactly remember, Dr Faulds came to visit Mr Hayes. Dr Faulds did not come yesterday, that is, of course, until after the accident. My master obtained medicine and pills from Kumogawa which he took. Mr Takahashi came about nine in the morning and stayed until about half past four. The report of firearms was heard about half an hour after. I went into Mr Hayes room twice after Mr Takahashi left, alone, and then came down and was sitting smoking and talking with the cook when the report was heard. I then rushed upstairs and found Mr Hayes gasping for breath and bleeding profusely ; his hands were closed, and the revolver was lying on the floor beside the bed. I ran downstairs and out of doors and called Mr Hall, who happened to be standing there. He sent us (cook and myself) upstairs to hold Mr Hayes' hands. The Yedo Hotel cook also went up with us. Then Mrs Blockley came and shortly afterwards Dr Faulds. Shortly after this my master died.

By a Juror :—I was down below with the cook when the report was heard. The third party came after.

H. Faulds, M.D., sworn :—I was called to see Mr Hayes on Friday the 14th. He complained of pain in his upper part of the head and of sleeplessness; his pulse was rather stronger and faster than usual but he had no appearance of fever about him. I prescribed a sleeping draught. I got a note from him the next day saying that he had had no sleep and that he wished me to see him again. He still complained of severe pain in the upper part of his head and of not having had any sleep. I felt strongly persuaded that he was mentally excited and asked him the question and pressed him for an answer, but he said "no." I injected morphine under the skin. Next day I had a note signed by Mr Bottomley saying I need not come round again unless specially requested. Last night, about 5 o'clock, I went to see Mr Hayes. There was no apparent disorder about the room. Mr Hayes was lying, with his head in a pool of blood, on the bed. The lower part of his face was covered with blood. He was lying in what might be called an easy and natural position, with his hands over the bed-clothes, which were not disturbed; his head was little over toward his right. There was no weapon in his hands, nor did I notice any immediately about him. A revolver was found on a large box near the window, looking as though it had been carefully placed there. It could not have been dropped where it was from his hands, I think. His eyes were closed and the pupils were natural. Blood was issuing from his nostrils and mouth in considerable quantities, also bloody froth. He was breathing heavily and slowly and with great difficulty, making a loud rattling noise as of blood in the lungs, etc. I saw no external marks of violence, but on opening his mouth the tongue was found blackened; the teeth were quite uninjured. I examined the palate and found that there was some injury there. While attempting to examine it he made a violent start and caught my finger. I got a cork and inserted it between his teeth and made efforts to stop the bleeding, and immediately sent for Dr. Manning. Mr Hayes died

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

in about twelve or thirteen minutes after my arrival. The revolver was not smeared with blood, but I found some very minute specks of blood on it that seemed fresh. I made a post mortem examination to-day with Dr. Manning. (Here Dr. Faulds gave a long description of the wound and general condition of the head and body). There was no evidence to prove that death was due to chronic disease, as the deceased appeared to be well-nourished and healthy.

By the Jury. There were some opaque spots on the brain, probably the result of inflamatory action, which might account for the pain. I can hardly conceive it possible that the wound could have been inflicted by anyone else. The teeth were uninjured

C. J. Manning, M.D. M.R.C.S., sworn:—I saw Mr Hayes at a about 8.15 p.m. He was lying on the bed dead, but the body was still warm. The bed clothes about the head and chest were covered with blood, and blood-stained froth was oozing from his lips. I made a post mortem examination to-day with Dr. Faulds. On opening the head I found a wound at the back of the palate large enough to admit one's finger, and taking an upward, outward and backward direction, towards the left ear but rather in front of it. There were no marks of injury about the lips or the teeth. The vessels of the brain were congested and contained dark-coloured blood. The conditions were the same as stated by Dr. Faulds, and the only conclusion I can draw is that the deceased died of an injury inflicted by his own hand.

Jno. W. Hall, of No. 67 Yokohama, said.—I was very well acquainted with the deceased. I saw him the day before yesterday when he informed me that he had been low for some days, suffering fearful pains in the head, obtaining no sleep and being able to take only little or no nourishment. I remained with him for about half an hour. He occasionally wandered a good deal in his speech. He asked why some one who is now in England had not been to see him and several other such questions. He said he was better then than he had been, and he hoped with a proper course of dieting that within a few days he would be all right.

After the Jury had been addressed by the Coroner, the foreman returned the following verdict:—That deceased shot himself while in a state of temporary insanity.

Law Reports.

IN THE JUDICIAL COURT OF KANAGAWA.

Before Mr. ASAINA KANSUI, Vice-President.

Saturday December, 15th; 1877.

H. GRAUERT *vs.* MARUOKA & Co.

(Adjourned from the 28th August last.)

This was a claim of $2,800 damages for breach of a charter party, by which the German barque *Madagascar* had been chartered by defendants from plaintiff.

Plaintiff and defendants appeared personally

To-day the Court room was properly heated.

After more than an hour's waiting, the case was at last called, when His Honour delivered the following

JUDGMENT.

(Translation.)

The plaintiff tried to prove the responsibility of Maruoka *alias* Araki Yahei for executing the charter party of the *Madagascar* by the facts: that at the time of the contract one Kikuchi Shozaburo, manager of Yahei's establishment, was present; that in front of that establishment a board was hung up with a notice of the sailing of the said vessel, and that the said Kikuchi Shozaburo had, in presence of one R. Bleifuss, one of plaintiff's witness, acknowledged the charter, Misaki Hambei, the defendant has also stated that the charter was made after consultation with Kikuchi Shozaburo, Maruoka's manager.

On the other hand, the said Kikuchi Shozaburo stated, that he was present at the time of the charter, to see how the matter was going on, and that he hung out the board with the notice of sailing, only for the purpose of inviting passengers and to obtain freight, but of course not to show that the vessel was chartered by his firm, and he denied ever having acknowledged the charter in the presence of Bleifuss.

There is thus no proof to show that Kikuchi Shozaburo was concerned in the charter, nor is there any evidence that the charter is Maruoka's *alias* Araki Yahei's. Consequently the above allegations, as well defendant's as plaintiff's, are inadmissible

The plaintiff claims both from Maruoka, *alias* Araki Yahei, and from Misaki Hambei the sum of $2,800, with the proviso that if Misaki should prove to be the *banto* of Maruoka's firm, then the latter alone be condemned to pay the said sum. From this it would appear that at the time of the charter plaintiff did not know whether he contracted with one or with two persons. But Misaki Hambei is not Araki Yahei's *banto*, nor is he his agent, and consequently Araki Yahei is not alone to be ordered to pay the sum claimed. Moreover, there is no proof that Araki Yahei had anything to do at all with the charter party.

For these reasons it is found that the charter was made between plaintiff and Misaki Hambei, who signed and sealed the contract.

Under these circumstances the sum of $2,800, which is claimed by plaintiff as damages for breach of contract, must be paid by Misaki Hambei solely, who is hereby ordered to pay the said amount to plaintiff.

YOKOHAMA SAIBANSHO.

15th day of 12th month, 10 year of Meiji.

IN THE TOKIO SAIBANSHO.

Before YAMAMOTO MASAKI, *Hanji.*

Monday, December 17, 1877.

THE NETHERLANDS TRADING SOCIETY *vs.* MASUYE JIROBEI.

This was a claim for $3,691.26, a debt arising from a consignment of silk, made by defendant to plaintiffs.

The plaintiffs were represented by Mr. M. Dames; defendant appeared personally.

Plaintiff stated that they, in the month of April, 1870, were requested by defendant to transmit for him 25 bales of silk to the Netherlands for sale there; that they received 16 bales on the 22nd April, and 9 bales on the 27th of the same month, and that they, on the first named day, advanced defendant $8,970, and on the second $4,650. Defendant consigned his silk to plaintiffs, because he, as a Japanese merchant, was unable himself to effect a sale in the Netherlands, and the plaintiffs advanced the defendant the current-price less 10 per cent., the account to be finally balanced after the silk had been sold in Holland. The plaintiffs were to be credited with 2 per cent. commission, and 5 per cent. interest on the advances paid; all the expenses connected with the shipment and sale were also to be deducted from the proceeds of sale, and the surplus, if any, to be handed to the consignor who, on the other hand, would have to indemnify the consignees, if the proceeds of sale proved insufficient to cover the advances and expenses, such being the rules of consignment Plaintiffs shipped the silk by mail steamer on the 14th May, 1870, but by the time the invoice arrived at its destination the war had broken out between France and Germany, and not only had prices in consequence gone down very much, but manufacturers stopped buying altogether. In May, 1872, the market again rose, and the plaintiffs sold 16 bales, keeping back nine, in expectation of still higher prices; but the market fell again Waiting for higher prices, plaintiffs held on until the month of October, 1874, but instead of going up the market went down, and to avoid greater loss, the plaintiffs sent the silk to London, where it was sold at public auction on the 8th October, 1874, with great loss. It has been contended by defendant that plaintiffs, when they found the market so bad, ought to have reported the state of affairs to defendant, and not to have sold the silk until after consultation with defendant. But no such stipulation had been made. When the plantiffs became defendant's consignees, it was, of course, understood that they should use their best endeavours in the interest of the owner of the silk, and no one could anticipate such extraordinary ill luck as had happened. In consequence of the Franco-German war nearly every merchant in Europe suffered unforseen losses. This was not the first time that the plaintiffs had acted as consignees for defendant, they had done so several times before, for instance in 1869, and they had, on the 8th January, 1870, handed defendant the proceeds of that consignment, viz $12,069.97. If the present consignment had turned out less profitable, that was no reason why defendant should refuse to indemnify his consignees, and plaintiffs now claimed that defendant be ordered to pay the balance of their account, $3,691 26.

The defendant admitted having consigned 25 bales of silk to plaintiffs in April, 1870, and received an advance of $13,220, and also that he, previously to this, had, in January, 1870, received $12,000 from plaintiffs, but he considered himself not liable to pay the balance of plaintiffs' account, because it was incomprehensible why the plaintiffs did not sell the silk immediately on its arrival in Holland, but only sold it after three years had elapsed, when the market was extremely low. If the prices had gone so very much down in consequence of the outbreak of the war between France and Germany, the plaintiffs ought to have consulted with defendant, but they did no such thing, but sold the goods as they pleased. and the defendant ought not to be held responsible for the loss incurred by them.

JUDGMENT.

The defendant pleads that the plaintiffs did not sell the silk consigned to them immediately on its arrival at its destination, but only sold it when the market had become exceedingly low, and for this reason he demands that the plaintiffs' claim be dismissed. But defendant did not, at the time of consignment, make any special stipulations with regard to the sale of the goods, he simply consigned his goods to the plaintiffs, and he cannot excuse himself from bearing the loss consequent upon a fall in the market prices. When the silk arrived in Holland, the war had already broken out between France and Germany, and there can be no doubt of its having had a depressing effect upon the European markets, which sufficiently justified the plaintiffs in postponing the sale.

For these reasons the defendant is ordered to pay $3,691.26 to plaintiffs as claimed by them.

TOKIO SAIBANSHO.

17th December, 10th year of Meiji.

IN THE YOKOHAMA SAIBANSHO.

Before Mr. ASAINA KANSUI, Vice-President.

Tuesday, December 18th, 1877.

WM. SAMUEL CANNON *vs.* SHU-ICHI ICHO, ITO SHIKOJIRO, NAKAYAWA TAMAHEI, and YANAGIWA TAIJIRO, officers of the *Kaigi-Kioku* Yokohama.

This was a claim for 7,689 *yen*, damages for non-delivery of 46,600 silk-worms'-egg cards, bought by plaintiff, but non-delivered on account of the unlawful interference of defendants, who had arrested the seller.

Plaintiff and defendants appeared personally.

Plaintiff, who is a resident of Tokio, stated in his petition that he,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

on the 26th November last, made a contract with one Arai Sakichi for the purchase of 46,600 silk-worms'-egg cards at 3½ cents each, the total purchase sum being 1,621 *yen*; he paid 25 *yen* as bargain money, and was to pay the balance of the purchase sum and take delivery the following morning. When he had paid the bargain money and got a receipt for it, in rushed the four defendants, belonging to the *Kaigi-kioku*, and arrested Arai Sakichi, who was thus prevented from delivering the cards. Plaintiff had already sold the cards at 20 cents a piece to an Italian merchant, named Mr Andreas, living at No. 77, Yokohama, and by not being able to effect that sale he has suffered a loss of 7,689 *yen*, which sum he now claims.

Plaintiff said in Court that, as far as defendants, in their answer to his complaint, had stated that he had only bought 25 cards, that was an untruth, because he had in fact bought 46,600 cards. Defendants had further said that they arrested the 25 cards because they were not stamped, but five of them were stamped; on what plea were they arrested? It was in a tea-house in Kanagawa, near the railway station, that he struck the bargain with the Japanese cartoon seller; the 25 sample-cards were there, and there he paid 25 *yen* bargain money on the purchase of 46,600 cards, not on only 25 cards, worth merely a few *sen* each.

After having examined the defendants, and two witnesses produced by plaintiff, His Honour intimated to the latter that it would be neecessary for him to hear the evidence of the cartoon seller, Arai Sakichi; and of the police officer, whom he understood had been present in the tea house.

The case was therefore adjourned *sine die*.

AN APOLOGY FOR BLUEBEARD.

(The Examiner.)

Professor Zeller, the illustrious author of the 'History of Greek Philosophy,' once published an essay to clear the character of Xanthippe, the wife of Socrates, from the aspersions which have long rested upon it. He shows conclusively that most of the charges brought against that lady are of late origin and of doubtful authenticity, and that the judgment of Socrates himself, the aggrieved party, upon his wife, was of a very different kind from the legend of calumny which after ages have built up. He likewise points out, with a candour worthy of a philosopher, that Socrates must have been a husband to try the patience of an even more submissive wife than Xanthippe is alleged to have been. For Socrates, amid a race of men which has fixed the type of manly beauty for all time, was grotesquely ugly. He was a man who neglected a bread-winning profession in order to spend his days in the unpopular task of convincing his fellow-citizens that they did not know what they were talking about. He was, what women cannot abide, an oddity. His hours were irregular; the company he kept was dubious; his habits were unaccountable; the money he gave to his wife was probably limited in quantity. And what woman could tolerate his imperturbable calmness under conjugal reproof, the polished irony of his repartees, his practice, most exasperating of all to the feminine mind, of always asking for a reason, his frequent exhortations to self-knowledge, and the intimations which he sometimes let fall, that he valued her temper as an exercise to his own equanimity? What fair-minded man could expect from a woman that she should have an eye for the unsurpassed gifts of character and intellect which lay hidden under this provoking exterior? Thus, by applying the historical method, and letting his consciousness play freely round the subject, the distinguished critic has dispelled the prejudice which once existed against this misconstrued woman, and thrown much unexpected light on the domestic relations of a man who must have been fascinating to anybody rather than to his wife. But Xanthippe is unhappily not the first or the last whose relations in married life have been judged harshly and ungenerously. A still more conspicuous instance of the shallow censoriousness of the world is to be found in the measure which has been meted out to the unfortunate Bluebeard.

An impartial investigation of the life and fate of this luckless but interesting character will not fail to show that, at the worst, if he erred at all, he was more sinned against than sinning; and that there is, indeed, every reason to hope and trust that, in his conjugal department, he was wholly and absolutely blameless. Let us briefly state the facts known about him, and the conclusion which these facts appear to warrant.

In the first place, the misfortune of his situation must be taken into account. His beard, it is recorded, inspired such extreme horror that few men, and no woman could at first look it without a shudder. Of what avail were his wealth, his influential position, and those social powers of which he gave frequent proof, when he was sentenced to the aversion of one-half the human race by his natural infirmity? The isolation to which this affliction condemned him must have made the craving for sympathy and affection all the more irresistible. There is ample proof that, notwithstanding the abhorrence caused by his beard, he was a man full of social charm. Even before his last unfortunate marriage, four women had already consented to become his brides. It is notorious that young ladies prefer a pair of epaulettes or a well-trained moustache to all the cardinal and theological virtues. What force, then, must there have been in this man, with none of the prestige of uniform or beauty, to have won so many female hearts! But the scene of his mental accomplishments only embittered the feeling that he was physically a shocking anomaly among mankind. That he had slain his first four wives will presently appear to be in the last degree improbable—but they had undoubtedly disappeared. We are not left without the means of conjecturing how. Smarting under his misfortunes, and robbed of almost the last shred of faith in human (and female) nature, he nevertheless resolved to make one final throw for domestic happiness and peace.

Hard by dwelt a widow lady with two sons, both absent in the army, and two daughters of great beauty. It was to this tranquil home that Bluebeard turned for something which might make him forget the past. His addresses, however, were not, for the first moment, received with much favour by the maidens. Bluebeard seems to have behaved admirably. When questioned by the mother as to which of the two was the object of his attentions, he replied, with a calmness and impartiality of judgment which did him honour, that it was immaterial. But the Immaterialist was not destined to be happy. Soon, indeed, a brief gleam of sunshine broke through the cloud. Bluebeard's perseverance, the kindness which he lavished on the ungrateful girls, the splendid receptions which he gave them at his country seat, did, in fact, make an impression upon one of them—the younger sister—who consented finally to the marriage. The fatal knot was tied. The honeymoon appears to have passed off without any misunderstanding. But at the close of the first month of marriage business summoned Bluebeard from home on a journey of some length. Attempts have been made to represent this voyage as a mere feint to deceive his wife; but his traducers may be defied to bring forward a single fact in support of this view. Indeed, the perfect—the touching—confidence which he showed in her is enough to refute it. The trusting husband put the key of every room, of every drawer, of every box and casket, including that which gave access to his money, his jewels, and his private papers, into his wife's keepings. One key only—the too famous key—he strictly charged her not to use. Had not his conscience been void of offence with regard to his former wives, it is ridiculous to suppose that he would have taken this step, which otherwise must almost infallibly have led to his detection and punishment. Why he—who knew too well what women, from Eve downwards, have been like—entrusted her with the key, cannot be said with certainty. He seems to have wished to test her obedience. It is possible that even in the first weeks of marriage he may have observed in her signs of weakness, of frivolity, of womanish curiosity. For him, set apart by nature to exceptional suffering, marriage must be everything or nothing. Had she stood the test, the autumn of his life might have made some amends for its blighting spring. He went and left her; and no sooner was he out of sight than forgetful of his commands and her own promises, regardless of every other key and lock, she went straight to the door of the forbidden chamber. For awhile she stood there in hesitation, not unmixed with a tremulous anxiety balancing between duty and curiosity. At last—and of course—the latter won the day. She unlocked the door, entered the room, and there saw four decapitated women, hanging to as many nails. At the shock of this unexpected sight she let fall the key; and the stain of blood which it bore when she picked it up, no washing, scrubbing or scraping could remove. The sequel may be told in a few words. Bluebeard, the day after his departure, was met by letters which informed him that his business was done. Joyfully he returned home, and after embracing his wife with effusion, asked her for the keys. All were returned to him except the one marked with the tell-tale crimson. The husband's suspicions were justly aroused. He demanded the missing key. The wife, confused and trembling, declared that it was mislaid, and asked for time to find it. Time was granted. At length delay, evasion, and subterfuge ceased to serve her turn. The key was at last produced, with its irrefragable evidence of the wife's disobedience. Then at last Bluebeard's self-control gave way. Snatching up a carving-knife which lay near, he was about, it is alleged, to inflict upon her a punishment which his calmer judgment would have shown him to be somewhat in excess of the offence, when she stayed his hand by a prayer for time to make her peace with heaven. In the very whirlwind of his passion, the indignant husband found room for mercy. Time was granted, and, in the interval, as is well known, the brothers were, with the connivance of her sister Ann, brought into the castle, and Bluebeard himself was overpowerd by superior numbers and put to death.

Now, what proof is there that Bluebeard killed his former wives, or deliberately planned the murder of the last? To take the second point first. His treatment of her, up to the time of his return from the journey, is described as uniformly kind and affectionate. Nay, more; it was that of a man who, though he may have noticed certain defects in her character, still trusted her fully. We are so accustomed to look at his conduct in the light of our own uncharitable prepossessions, that a plain, unvarnished statement of the facts has the air of special pleading. Surely there are neater and quieter ways of getting rid of a wife than chopping off her head in open daylight, in a house with several people in it, and close to the king's highway. The truth of the matter probably is that Bluebeard, in a transport of not unnatural indignation, caught up the first weapon which came ready to his hand, with the object, possibly, of doing no more than the frighten the disobedient woman. That, even in the midst of his just incensement, he was open to the appeal of pity, is conclusively proved by the respite which he granted her—a respite for which he himself paid dearly. Taking the severest view of his case for which the facts offer the faintest justification, no honest jury would bring him in guilty of anything worse than an attempt at manslaughter when in a state of temporary insanity. The poor man, in fact is to be pitied, not blamed. The unfavourable view of his conduct towards his last wife is founded on the gratuitous assumption that he was blameworthy in his relations with the other four. But of this there is no proof. There is, indeed, no reason to think that the decapitated women, whoever they were, had been murdered at all. In the first place, to repeat the argument used above, who ever heard of such a clumsy way of giving people their quietus? Bluebeard was of all men precisely the one to treat murder as a fine art, to choose the most dexterous and scientific means of committing it. Nor, again, is it conceivable that one wife after another would

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

have fallen by his hand, without the friends of the murdered women setting the police on the assassin's track. It is equally unlikely that after one or two had disappeared, nobody knew where, others would have been found ready to take their place. Nor is there any evidence that the women hanging on the nails were, after all, the missing wives Bluebeard was far too clever a man to dispose of them in this way; and, if he were not, the law would long before his fifth marriage have had something to say to him. It is more than probable that the unhappy women, disgusted with the personal appearance of their husband, and too shallow and frivolous to understand the great qualities to which his abnormal hairy development blinded them, had absconded with certain officers from the neighbouring barracks, where it is known positively that the two brothers were stationed. It is notorious of what exploits in this department military men are capable. Possibly, indeed, or rather probably, the very two men by whom the blood of the injured husband was at last shed were themselves the wicked agents by whom his domestic peace had been already four times ruined. To anyone who impartially and conscientiously weighs the evidence on both sides, this is the explanation which will most commend itself. Many difficulties are removed by this hypothesis. It explains why the brothers, ever on the watch for an opportunity to rid themselves of one whom they had so grievously wronged, turned up at the precise moment when they could give some plausible colour to their deed of violence. It explains why, two to one against Bluebeard, and better armed, they did not deliver him up to justice, and incur the risk of public exposure, but slew him on the spot and silenced the one voice which would have marked them out for infamy. And, on the other hand, it sets the generous affection of Bluebeard, which could fix itself on a woman from whose family it had already received such irreparable wounds, in a halo of romantic glory. The one hitch—and it is a very trifling one—lies in the problem as to the hanging corpses. Since they did not belong to the former wives, nor were they the bodies of murdered women at all, what were they, and how did they come there? This is a difficulty; but without difficulties there would be no such a thing as faith.

REUTER'S TELEGRAMS.

LONDON, December 20th, 1877.

THE WAR.

Despatches report that the German Government has refused the proposal for mediation made by the Porte.

ENGLAND.

The opening of Parliament will take place the 17th January next, when the *Standard* states the Ministry will propose an increase of the British Army and other changes.

Conservative journals, Austrian and German, support Russia.

Real danger to British interests is apprehended.

LONDON, December 18th, 1877.

THE WAR.

Despatches report that the Italian Government has accepted the proposal for mediation made by the Porte. It is, however, believed that the Turkish proposition for mediation will not be successful.

The Russian troops are advancing on Gabrova.

LONDON, December 17th, 1877.

SERVIA.

Despatches report that the Servian Army has been ordered to cross the Frontier.

THE WAR.

The Circular Despatch received from the Porte solicits mediation, and proposes collective intervention of the Foreign Powers in order to stop further bloodshed.

The conditions it is prepared to offer for Peace are not stated.

LONDON, December 16th, 1877.

THE WAR.

Despatches report that the attack to be made by the Russian troops on Erzeroum is imminent.

The British Consul has left Erzeroum in charge of the archives of his Consulate.

SERVIA.

Servia has declared war against Turkey.

ENGLAND.

The *Morning Post* states that the Cabinet Council was convened to consider the Circular Despatch received from the Porte, wherein it intimated its willingness to accept the mediation of the European Powers.

The Queen has gone on a visit to Hugenden.

LONDON, December 16th, 1877.

ENGLAND.

A Cabinet Council has been held to consider the consequences likely to result from the fall of Plevna.

Parliament has been prorogued until the 17th January next.

Mr. Garthorn Hardy has stated that he considers peace impossible without British intervention.

FRANCE.

M. Batbie was unable to form a Cabinet.

M. Dufaure has succeeded after great difficulty in forming a new Cabinet.

LONDON, 4th December, 1877.

Perfect communication exists between Erzeroum, Trebizonde and the interior.

The Russian troops are wintering on the plain of Passin. Their advanced guard is at Deve Boyun.

The Turkish Troops at Orchanie and the adjacent positions are falling back upon Sophia.

At a Conservative demonstration, Sir Stafford Northcote, repeated the statement that England's policy was one of conditional neutrality, and declared her readiness to mediate when able.

CHRISTMAS DOUBLE ACROSTIC.

First to the ladies, then to high and low,
Both rich and poor, then every friend or foe,
To all the nations that on earth do dwell,
To those at home God knows we love so well,
To all beside, whoe'er they chance to be,
That in the mind's embrace we've failed to see,
We wish much joy, good will, and peace sublime,
At this recurring interval of time.

1.
Like this and that my first and last appear,
For Christmas these, those for the New Year.

2.
A great impediment you'll find this light,
It blocks all progress, and obscures the sight.

3.
A Californian town, who finds the name,
May be induced Eureka to exclaim.

4.
The burthen of this light must rest with you,
The language may be dead, the weight is true.

5.
If but indebted, then you surely know
It just amounts to this, you simply owe.

6.
Spring, summer, autumn, winter, which you please,
It gives a relish when not one of these.

DOUBLE ACROSTIC.

Where youths of muscle and of sure eye
For words of praise from lips of ladies vie.

1.
I oft afford quartets a costly joy,
Of India hight recorded thought destroy.

2.
Take but one letter from a fell disease,
And me in Latin you may guess with ease.

3.
Wherewith the sex hath oft its smilings mask'd,
And warriors hostile crania's thickness task'd.

4.
An honourable support of perfect man,
Yet what is ne'er an honourable man.

5.
Let but these letters a Dutch stream embrace,
And me you may in every mirror trace.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—A good general business has been done at hardening prices. In *Yarns* large transactions are reported and quotations show throughout an advance, closing very firm. *Shirtings* are in fair enquiry, and rates have improved. *T. Cloths* move in small lots. Of *Velvets* some sales are reported at current rates. Other articles are unchanged.

Grey Shirtings:—					White Shirtings:—		
7 lbs.	38½ yds.	39 in.	per pce.	$1.45 to $1.85	60 to 64 reed 40 yds.	35 in.	per pce. ... ... 2.10 to 2.30
8 lbs.	38½ yds.	44 in.	,,	1.90 to 2.30	Turkey Reds 24 yds.	30 in.	2—3 lb. per lb. ... 0.65 to 0.82½
8 lbs. 4 to 8½ lbs.	38½ ,,	39 in.	,,	1.65 to 2.35	Black Velvets		... 7.25 to 8.25
9 lbs.	38½ ,,	44 in.	,,	2.10 to 2.52½	English Drills 14/15 lbs.	40 yds,	30 in. ... ... 2.45 to 2.70
T. Cloth 7lbs.	24 ,,	32 in.	,,	1.40 to 1.57½	Taffachelass	12 yds,	48 in. ... ... 1.65 to 2.00
,, 6lbs.	24 ,,	32 in.	,,	1.10 to 1.25			

Yarns.—

No 16 to 24	per picul...	$29 00 to 32.50	No. 38 to 42	per picul...	$36.50 to 39.50

Tea.—Business continues brisk in this staple, settlements for the interval since date of last mail report reaching the large total of 7,500 piculs, which is much in excess of usual settlements at so late a date in the season.

Prices are in consequence very firm, and a rise of $1.00 to $1.50 has been for the moment established, but holders of stock seem anxious to realize before the New Year, and are inclined to meet purchasers on fair terms.

The *Messenger* has been laid on for New York at £1.10/ per ton of 40 cubic feet.

Common	$10.00 to $12.00	Fine	$21.00 to $24.00
Good Common	$13.00 to $15.00	Finest	$27.00 to $32.00
Medium	$16.00 to $17.00	Choice	$34.00 Nominal.
Good Medium	$18.00 to $20.00	Choicest	—

EXCHANGE AND BULLION.

DYSENTERY, CHOLERA, FEVER, AGUE,

COUGHS, COLDS, &C.

Dr. J. COLLIS BROWNE'S

CHLORODYNE

(Ex. Army Med. Staff)

IS THE ORIGINAL AND ONLY GENUINE.

CAUTION.—Vice Chancellor Sir W. P. Wood stated that Dr. COLLIS BROWNE was undoubtedly the Inventor of CHLORODYNE; that the story of the Defendant, Freeman, being the Inventor was deliberately untrue, which he regretted had been sworn to. Eminent Hospital Physicians of London stated that Dr. Collis Browne was the discoverer of Chlorodyne; that they prescribe it largely, and mean no other than Dr. Browne's.—See "Times." July 12th, 1864.

The Public, therefore, are cautioned against using any other than

DR. J. COLLIS BROWNE'S CHLORODENY

REMEDIAL USES AND ACTION.

This INVALUABLE REMEDY produces quiet refreshing sleep relieves pain, calms the system, restores the deranged functions and stimulates healthy action of the excretions of the body without creating any of those unpleasant results attending the use of opium. Old and young may take it at all hours and time when requisite. Thousands of persons testify to its marvellous good effects and wonderful cure, while medical men extol its virtues most extensively, using it in great quantities in the following diseases:—

Diseases in which it is found eminently useful—Cholera, Dysentery, Diarrhœa, Cholics, Asthma, Rheumatism, Neuralgia, Whooping Cough, Cramp, Hysteria, &c.

EXTRACTS FROM MEDICAL OPINIONS.

The Right Hon. Earl Russell communicated to the College of Physicians and J. T. Davenport that he had received information to the effect that the only remedy of any service in Cholera was Chlorodyne.—See "Lancet," December 31st, 1864.

From A. Montgomery, Esq., late Inspector of Hospitals, Bombay:—"Cholorodyne is a most valuable remedy in Neuralgia, Asthma, and Dysentery. To it I fairly owe my restoration to health, after 18 months' severe suffering, and when other remedies had failed."

Dr. Lowe, Medical Missionary in India, reports (Dec. 1865) that nearly every case of Cholera in which Dr. J. Collis Brown's Chlorodyne was administered the patient recovered.

Extract from "Medical Times," January 12th, 1866.—"Chloro dyne is prescibed by scores of orthodox medical practitioners. Of course it would not thus be singularly popular did it not supply a want and fill a place.

Extract from the General Board of Health, London, as to its efficacy in Cholera.—"So strongly are we convinced of the immense value of this remedy that we cannot too forcibly urge the necessity of adopting it in all cases"

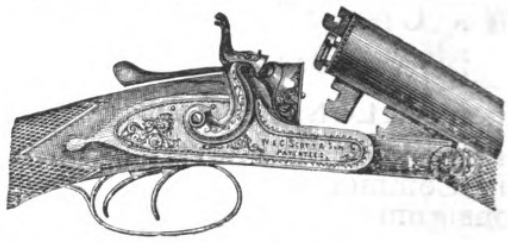
Beware of spurious and dangerous compounds sold as CHLORODYNE, from which frequent fatal results have followed.

See leading article. "Pharmaceutical Journal," August 1st, 1869, which states that Dr. J. Collis Browne was the inventor of Chlorodyne; that it is always right to use his preparation when Chlorodyne is ordered.

CAUTION.—None genuine without the word "Dr. J. Collis Browne" on the Government stamp. Overwhelming medical testimony accompanies each bottle.

The public are further cautioned, a forgery of the Government stamp having come to the knowledge of the Board of Inland Revenue.

SOLE MANUFACTURER—



J. T. DAVENPORT,

83, Great Russell Street, Bloomsbury, London.

Sold in bottle at 1s, 1½d., 2s. 9d. and 4s. 6d.

Yokohama, December 15, 1877. 26ins.

MISCELLANEOUS.

W. & C. SCOTT & SON.

FIRST PRIZE MEDAL and DIPLOMA OF HONOUR awarded, CENTENNIAL EXHIBITION, Philadelphia, 1876. For excellence of Materials and Workmanship in their PREMIER QUALITY and medium grades. Their New PATENT TRIPLEX action and COMPENSATING LUMP.

The attention of Sportsmen is requested to the above new system of action. Its superior strength and solidity imparts greatly improved shooting powers. Hard hitting being the desideratum required is obtained by this powerful Gun.

Prices of the TRIPLEX: £22.10.0, £30.0.0, and £37.10.0. This latter is our highest quality and is marked "THE PREMIER QUALITY."

Excellent DOUBLE-GRIP BREECH-LOADERS at £8.10.0, £12.0.0, £16.0.0 and £20.0.0. Shooting guaranteed.

OUR PATENT TOP LEVER with PURDEY solid double bolt. Shooting guaranted. Sound plain finish £15/0/0. Well finished, good materials £21.0.0. Cases and implements £4, £6 and £8 extra.

In the New York International Gun Trial competition, 1873, the Committee awarded our guns the Diploma, being declared first for points of merit of action, materials, proportion and shooting qualities.

Extract from Forest and Stream, New York, December 26th, 1876. Contributed by one of the judges of awards of guns at the Centennial. "The crowning glory of the display was the case of W. & C. Scott & Son. This firm has sent more good guns to this country during the past few years than any other, and they especially commend themselves to American sportsmen from the fact that they furnish good guns, honestly made, and of high shooting powers at very moderate prices. Their TRIPLEX ACTION combines, in the highest degree, strength with simplicity, and it must rapidly secure the favor of all who test its merits."

OUR PATENT COMPENSATING LUMP strongly recommended; should be ordered on every gun (cost, 30 shillings extra). For the Sportsman abroad, this invention is invaluable, being secured against the joint becoming loose after several years wear.

CHOKE BORED GUNS.—Slight, Medium or Full.

BREECH LOADERS in all systems from lowest qualities.

SINGLE and DOUBLE MUZZLE LOADERS.

Makers of the NEW SWINBURN-HENRY Sporting Express and SWINBURN-HENRY RIFLES and Carbines taking Government Ammunition. This Rifle is a great improvement on the Martini.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

It is a mistake to suppose that those connected with the Sisyphus task of conducting a newspaper do not require occasional relaxation, but alas, they seldom get a chance to indulge in it. At the New Year when all the world is playing holiday, circumstances favorably combine to allow of several days' well earned rest. There are no mails due, no business and no native papers. We have therefore much pleasure in announcing that, in common with our contemporaries, we shall publish no morning paper on Monday and three following days, and we feel convinced that the public will not begrudge us the holiday.

The news in Japanese circles is of the most meagre character, everything being seemingly at a standstill in view of the approaching New Year's holidays. The only item of interest is the visit on the 28th instant of the Chinese Ministers to the Mikado, when His Majesty addressed them in the following terms, "Your mighty Emperor has chosen you as Ambassadors, and appointed you the bearer of a letter by which the close friendship of His Majesty of China is shown. This gives me great pleasure. I believe you to be moderate in your views and experienced in the duties which it is your task to perform, and that you will bring the two nations into closer bonds of union. I pray for the peace and prosperity of your country."

Owing to the great inconvenience that has been felt by the community in the matter of exact time since the discontinuance of the weekly noon gun, Mr. Rickett, the agent of the P. and O. Co., has kindly undertaken that at five minutes before noon on Monday, the 31st, a flag shall be hoisted at the main of the S. S. *Malacca*, and that at noon precisely the flag will be lowered and a gun fired from the steamer.

A mail will be closed at the Imperial Japanese Post Office for Hakodate, by the *Takachiho Maru*, at 6 p.m. to-morrow, Sunday, the 30th instant.

A contemporary takes exception to a statement in our last issue that 'for ten years the most cowardly species of assassination was practised with the view of frightening us out of the country.' The statement in its bare expression is certainly true. Between 1859 and 1869 a terrible series of murders were undoubtedly perpetrated, and but very few of any of these were brought about by the folly or wrong-doing of the victims. In addition, many attempts at assassination, some inchoate, others proceeding as far as a scuffle, were made during the same period, and of by far the greater number of these attempts no record whatever exists. Most of us who knew the country between 1862 and 1866 are perfectly aware of these facts, and the writer of these lines was an eyewitness of three several instances of attempted assassination occuring within the space of a single year, of which no official report was ever made.

Nevertheless, the statement excepted to by our contemporary leads, as it stands, to conclusions of far too sweeping a nature. Assassination is at all times a cowardly practice, whatever the motive may be, and those that took place between 1859-69 in this country were no exception to the rule. But the motive was not in itself usually an ignoble one. A sort of fanaticism allied to, though nor identical with patriotism, commonly actuated the assassin, who nevertheless chose the most contemptible means of effecting his object. Nor do we believe that the Government of the conntry in any way, directly or indirectly, lent their sanction or approval to the practice. In fact, we are convinced that the Shôgunate almost from the beginning was anxious to maintain and extend intercourse with foreigners. We are equally sure that no preference existed on the part of the people of Japan, taken collectively, for such a mode of getting rid of the 'ugly barbarian', and the statement in question ought to have been so expressed as not to contain any possible implication of the Government or people of Japan in the cowardly and treacherous system of a fanatical party. But Japan cannot escape a certain responsibility for crimes, the authors of which, if not applauded' were not condemned, either by the Government or the people, and only in a very few instances punished; crimes, too, that the conduct of the very party now in power may fairly be said to have rather encouraged than deprecated the commission of. We trust there will be no occasion to refer to these matters again. We have no desire whatever to rake up the past, and we think both the public of this country and foreign residents would do well to order their intercourse upon the facts and requirements, of the present, in accordance with those rules of morality which ought to hold as much between nations as between individuals.

The friends of General Van Buren will be glad to learn that the slanders which appeared against him in some of the American papers, and which he went home to disprove, have been treated with the contempt which they merited by the State Department, and that the perpetrators have failed in their purpose of doing the object of their spite any injury.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

The State and Navy Departments are, or very properly pretend to be, entirely ignorant of the existence of any complaints against the conduct of General Van Buren in his capacity of Consul General at Yokohama, which originated only in the malice of some enemy, and to which it is surprising that the *Times* and other prominent American papers should have given publicity without first knowing on what grounds they were preferred.

The *Times* now publishes the following special despatch with reference to the matter :—

Special Dispatch to the New-York Times.

Washington, Nov. 22.—A paragraph containing a statement of complaints against Gen. Thomas B. Van Buren, Consul-General at Kanagawa, Japan, was sent from here to *The Times* in April last, which subsequent information shows did Gen. Van Buren a great injustice. The paragraph was published in the belief that the complaints alluded to had been, or would be, brought officially to the notice of the State Department. No charges of the kind were made, however, and there is reason to believe that the report to which The Times, in common with some other papers, gave currency, had their origin in the malice of some enemy of Gen. Van Buren. The statement referred to was that naval officers who had returned from Japanese waters made complaints against Gen. Van Buren, charging him with immoral and scandalous practices, general dereliction of consular duties, and with imposing unusual and cruel sentences upon American seamen taken before him for judgment. It now appears that no such reports were ever made to either the State or Navy Department. Such complaints are not only unknown to the State Department, but Gen. Van Buren presents evidence of a conclusive character that they were unknown in Japan. Capt. Young, of the flag-ship Tennessee, at Yokohama, writes to Gen. Van Buren : " I have never heard one word from either officials or civilians reflecting upon your private character, and so far as I know it is unexceptionable. Officially, you stand high ; I have always found you prompt and zealous in attending to your consular duties, and very considerate in awarding fines and punishments to seamen who have been brought before you for irregularities on shore. I never heard a complaint from any man attached to this ship. On the contrary, the men express themselves as satisfied with your sentences." Gen. Van Buren has also a paper signed by 15 of the most prominent Naval officers at the Yokohama Station, which is dated on board the Tennessee, and says : " We believe these attacks emanate from personal malice, and we desire to bear our best testimony, not only to the marked ability and justice with which you have conducted the affairs of your office, but to add to that testimony an expression of entire confidence in your fidelity honor, and uprightness as a gentleman and patriotic American." There is an abundance of evidence that Gen. Van Buren, instead of being liable to the charges reported against him, has a very high social and official character, and that in Japan, as at home, his private life is above reproach.

It is stated that General Van Buren will return shortly to resume his official duties at Yokohama.

At the present time both in this country and in America the question of Tariff Reform seems to be occupying the largest share of public attention, and while American writers preach protection and high duties for Japan, it is only necessary for them to look at home and see what the workings of the doctrines have resulted in. The *Nation* has a most able article on Tariff Reform, which we regret space does not permit us to quote at length, by which it appears that the new Committee of Ways and Means is strongly inclined to lower the present tariff. The writer commences his article by stating that there has been for some years. " A growing belief among the class (by far the largest in every community) who never trouble themselves with abstract views aboutany thing, that high duties on imports have not been producitve of any high degree of prosperity to the country. This belief is shared by not a few manufacturers who joined in securing for us the present tariff, and who once suposed that their interests depended upon the rigid maintenance of such legislation. It is noteworthy that nobody desires any increase of protective duties just now, although many oppose any medding with the subject whatever. The protectionist doctrinaires of the Carey school, and the protected interests which have so far got the better of their neighbours in the adjustment of duties that they can keep their heads above water in the surrounding sea of bankruptcy, are firmly opposed to any change. Subsidies to steamship lines are the remedy they propose for the unsatisfactory state of our foreign trade. Anything which looks to compensating anybody out of the public treasury for any losses he may sustain in cotton spinning, or ship-building, or otherwise, meets their approval. Cheap freights to South America at the public expense would undoubtedly help some of our suffering and over-crowded industries. If Government would undertake to lay down American goods at Rio, Calcutta, Melbourne, Hongkong, and other convenient places without any freightcharge at all, they would be helped still more, and the perfection of the system would be reached if Government would pay a portion of the cost of the goods sufficient to enable the manufacturer to undersell the grasping Briton. In this way France has nearly crushed out the English sugar-refiners, and what France has done on a small scale, we might do on a large one. The plan of putting the entire cost of running a steamship on the letter-bags is susceptible of a high state of development, and it is evident that protection, having drained the tariff to the very dregs, is looking that way for a new stimulant."

As yet it is doubtful what means will be adopted to save the revenue, and at the same time to " relax and unbend the monstrous system that protection has riveted upon the country " proving how difficult it is for a nation to cast off this Old Man of the Sea, who has once been permitted to lock his arms around her neck, paralysing her energies and strangling her commerce. As we pointed out last week, all customs duties are economically objectionable, but there may be cases where the general objections to such imposts have less application, and while certain duties may be comparatively little felt by the consumer, they may produce a considerable revenue to the Government. This fact the Americans are at last recognising, and while it is under consideration to reduce all existing duties by twenty-five per cent., it is proposed to re-impose the tax on Tea and Coffee, which it is estimated will yield a clear gain of $25,000,000 to Revenue. " The duties on Tea and Coffee " says the writer " were repealed at the instance of the protectionists at a time when the revenue was in excess of the wants of the Treasury, and when duties on something had to be withdrawn. Lest the burden should be taken off blankets, carpets, salt, quinine, spool-cotton, calico, copper, or something else producing little revenue but much taxation, they united in putting upon the free list the two articles which yielded the greatest revenue with the least taxation. In this enterprise they were assisted by sundry demagogues of free-trade extraction, who are now discovering, or pretending to discover, that the repeal of the tea and coffee duties never benefited the consumers at all. The truth of the matter is that tea and coffee are articles of such general and constant use that a very large sum can be realized to the Treasury from them by a tax so small that the public are not made aware, by any change in retail prices, when it is put on or when it is taken off. To sacrifice such a source of revenue was something worse than a blunder ; and tariff reform, which consists not merely in repealing and lessening duties but in adjusting them so that the largest fiscal results shall be achieved with the least burden to the people, should begin by reimposing these duties, and thus making it possible to remove duties now exacted from the tools and materials of industry, which constitute the basis, or pretended basis, for a large part of the protecting duties on manufactures. If the Committee of Ways and Means has tariff at heart, it will begin by clearing up the underbrush of raw materials, such as wool, hides, copper, hemp, linseed, fibres, alkalis, dyestuffs, and chemicals, and thus obtaining a clear view of the foundation of our manufacturing system, which is at present so choked and obscured by weeds and parasites of every description that nobody knows the reason of anything, although everybody complains of hard times, and the manufacturing operatives suffer grinding misery under the highest tariff ever known to the present generation."

A meeting of the members of the Yokohama Race Club and Yokohama Racing Association was held at the International Hotel this afternoon, for the purpose of amalgamating as a Racing Club under another name, and so dissolving the two rival bodies who have for too long represented a divided racing community. This purpose has now, fortunately, been accomplished, and we shall soon know the Club and Association no more, but shall look to the new Yokohama Jockey Club for the future management of racing matters here. We congratulate the whole community that the breach has at length been healed, and that there is now nothing to prevent good feeling existing among those who indulge in the noble sport. The meeting was well attended, and was

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

presided over by Mr. Dennison the Acting U. S. Consul-General. The first business was to decide on a denomination for the new Club, after which those present proceeded to vote for a committee, the result being that the following gentlemen were elected:—Messrs. Keswick, Fischer, Cruickshank, J. A. Fraser, Center, Allen, Evers, Kirkwood, Monbel, A. Barnard and de Boinville. This Committee will proceed at once to draw up rules for the governance of the new Club, which they will lay before the members at an early date.

We beg to call attention to a letter which appears elsewhere in our columns, addressed to us by Mr. Bramsen on the subject of the transliteration of Japanese words. Mr. Bramsen complains, and, with all respect to the opinion of those gentlemen whose authority on the subject cannot be questioned, we think with reason, that the mode recently adopted of rendering Japanese words into English equivalents will be apt to confuse the general reader. Those who are unaware of the reason why what is generally known as Kôbe should properly be written Ka-u-be, or why what is commonly written and pronounced Ôsaka, should be changed into O-ho-za-ka, will be not a little bewildered by the recent innovation. If consuls in future trade reports adopt the new system of transliteration, we shall have the Foreign Office and others who may be interested in them utterly befogged, and probably see statements in the papers to the effect that new ports have been opened in Japan. We thank Mr. Bramsen for calling attention to the subject, and we entreat those gentlemen who have by unremitting study vanquished the difficulties of the Japanese language, to be as considerate as they can to their weaker brethren, and not to sacrifice intelligibility to absolute correctness, except in scientific works addressed to those who have sufficient acquaintance with the language to understand this erudite method of transliteration.

With the introduction of newspapers apparently follows the infliction of news-boys, loud voiced, glib-tongued, skilful in invention. The Japanese Government shows itself in advance of Western Governments—and in some other minor matters the latter might with advantage follow its lead—by immediately setting to work to abate the nuisance, for we read in the *Chôya Shimbun* that the Minister for Home Affairs has issued a notification to the Bureau of Police to the following effect; that whereas the sellers of newspapers in Tôkiô are given to cry out at the top of their voices what is not contained in the journals, the police should take measures to put a stop to such proceedings.

The *New York World* states that the Hon. Francis Plunkett, formerly British Secretary of Legation in Japan, and afterwards chargé d'affaires at Washington, gave a farewell dinner recently in that city, previous to his return to England, his successor Mr. Victor Drummond having arrived.

Men are no longer to have the monopoly of executing arduous pedestrian feats, and Weston and Gale will have to look to their laurels, as woman, who seems bent on invading all those walks of life which man has hitherto monopolized, is determined to compete with him on what might surely be considered his own ground. A Miss Von Hillern, on the 22nd of November, at Philadelphia, completed the task of walking 144 miles within 50 hours. The time actually occupied in walking was 35 hours 8 minutes and 45 seconds, the rests amounting to 12 hours 40 minutes and 51 seconds. After this who will doubt the story of Atalanta's race?

The *Athenæum* has some very sensible remarks on the use of soda water, which although they are addressed to Indian readers have equally pertinent application to drinkers here. The writer points out how many people who abjure the drinking of water on the ground that it is prejudicial to health, uniformly supply its place by soda water, believing that with that they are perfectly safe. That this is a great mistake is proved by the number of cases of alarming illness, which are traceable to some poison, either vegetable or mineral, contained in the soda water bottle. Although aerated waters of native manufacture are more likely to contain poisonous elements than those put up by known makers at home, these latter are not entirely free from suspicion, and are too often prepared from impure and tainted water. The *Court Journal* some time since remarked that "nothing can exceed the flatness and nauseous flavour of some of the aerated waters of commerce when once the gas has been allowed to escape." As the writer in the *Athenæum* remarks, such a change is not due to metallic changes; but must be caused by the water itself. It is even thought that some of the numerous cases of typhoid fever which have lately occurred among the upper classes in England may be traced to the same source. Another very fruitful source of discomfort, if not of actual illness, after drinking soda water is to be found in lead poisoning arising from the pipes used in its manufacture, and the use of uncleansed, lead-topped syphons in the place of the old fashioned glass bottles. The soda water manufactured by Chinese and native makers both in Tôkiô and Yokohama, and which but a short time since was largely consumed both in restaurants and in the houses of foreigners at Tôkiô, is altogether bad, and we are acquainted with several cases where those who drank of it suffered severely. Where it is so largely used as here, too much care cannot be taken in investigating its quality.

It is satisfactory to learn that the prospects of the crops in India continue good, and that with the exception of one or two districts the rainfall has been everywhere abundant. Prices continue to fall, and the numbers employed on relief works and in receipt of gratuitious relief diminished in one week in November by the number of 277,029.

After all there is nothing new under the sun, and it is seldom that the spirit of research which distinguishes the present day does not discover that every so called modern invention is in some sort a repetition of something long ago existing. According to one of the American papers, the principle of the telephone has been known and applied by the Camaroons on the West Coast of Africa from time immemorial, and thus it is an old servant of the earliest times of civilization. In October 1865, Mr. Jones sent a drawing and description of the instrument to the London *Athenæum* with the following remarks:—"By the sounds produced on striking the instrument the natives carry on conversation with great rapidity, and at several miles distance. The sounds are made to produce perfect and distinct language, as intelligible to the natives as that uttered by the human voice, and which I had the means of testing on several occasions. The instrument is in universal use among the Camaroons, and up in the interior, in the Abo and Budi countries, a part of Central Africa not yet visited by Europeans. I visited this part of Africa in 1859; my coming was generally announced beforehand to the different villages by the 'Elliembic.' I questioned some of the oldest inhabitants as to the inventor, but none of them could tell me, further than that they supposed it must have been some of their great-grandfathers. This most ingenious invention, therefore, must have been in existence before telegraphs were dreamed of in England"

A correspondent writes to us as follows:—"On December the 21st the hoisting engines, machinery and various pumping engines, connected with the Heigori Blast Furnaces at Kanaishi, were set in motion by Mr. Casley for preliminary trial, and were found to work most satisfactorily. The inhabitants of the neighbourhood came in crowds to see the, to them, extraordinary sight of powerful motion produced by no visible means, some declaring it to be a miraculous work of the Deity. Considerable excitement prevailed but good order was kept."

The *Hiogo News* states that Kagoshima is rapidly rising from its ruined state and recovering its prosperity, and thinks that much is due to the generous action of the Government in

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

assisting those who suffered by the war, irrespective of political sympathies. Doubtless this must have an excellent effect, as also the moderation and clemency which it has shown toward those who took part in the rebellion. There are few Governments that would have acted with so great leniency under similar circumstances.

It is evidently dangerous to joke with or attempt to cheat your barber out of his just dues That he is as cunning as Shylock and far more powerful for evil while he holds your unresisting face with one hand and his razor with the other, let the following anecdote from the *Decoan Advertiser* of the 9th November show. Last Saturday, at Shumshabad, a Brahmin engaged the services of a barber. After completing his work he demanded payment, whereupon the Brahmin refused to pay him there and then. "I don't care much about the payment," said the barber, "as I have shaved you half and half." Well, if you shave me properly," said the Brahmin, "I will then pay you." The barber set to work, and after scraping at the Brahmin's cheek for some seconds, all of a sudden cut off his nose by way of satisfaction and in full settlement of his dues!

The Indian student, unmindful of Ruskin's maxim to read but little poetry and never by any chance to write any, is much given to gushing in poetry. How successful he is in his literary efforts may be gathered from the following extract from the *Times of India*.

A Baroda poet has lately been addressing his young Prince in the language of the Power which raised that potentate to the throne. He commences, according to the *Pioneer*:—

Hail, ever hail, our unique boy-Prince,
Whom Mother Queen picked up from a field,
Far away, on village boys, he used to wield
The power of a boy who is strongly willed;
Long live our new-born Syaji Maharaja,
Farzand-i-Khas-i-Daulat-i-Inglishia,
And may thy Royal Line ever grown on;
On which many happy centuries may dawn.

After another burst of hails! ! to "our unique boy-king, whom Northbrook cleared out of a Ring" (a proceeding which refers apparently to some prize-fight, not hitherto chronicled), the bard goes on to describe the ends and objects for which the young Prince was placed upon the musnud, and the means by which these were accomplished:—

Hail, ever hail, our brave young Syaji
Brought to learn Statecraft and Geography.
From a village hut, to win a Kingdoms's glory;
Long live, &c., &c,

Like all intellectual athletes, our poet reserves his strength for the finish, and closes his ode with the following magnificent peroration:—

And let thou, in growing long-lived age, be graced
With conservatism pellucid, of old Syaji, decked
With essence exquisite, of humanities choicest,
A Lytton produces to blend the East with West;
Long live, &c., &c.

The *Osaka Shimpô* gives some statistics relative to the traffic of that city, by which it appears that there are 9,645 *jinrikishas*, 2,934 coolie carts, 583 farming carts, 348 ox carts, 2,483 small coolie carts, 1,340 trucks, 14 one horse carriages, and 14 riding horses, showing that the population is little given to equestrian pastime.

The editor of this same paper, which is an offshoot of the *Osaka Nippo*, seems fond of collecting statistics, for he further informs his readers that there are three thousand fighting dogs in Kochi Ken (Tosa), and that there are collected annually from this source taxes to the amount of twenty-five hundred *yen*. Dog fighting is the great sport in Tosa, and the people of that province go to Osaka to purchase dogs, very high prices being sometimes paid for animals of good breed.

The usual midnight mass was held at the French Church on Christmas Eve. The church was more elaborately decorated than on previous years, while the musical portion of the service which was under the direction of Mr. O. Keil, was, thanks to that gentleman's untiring exertions, rendered with far greater effect than on any former occasion. Sermons were preached by Abbé Pettier, in English, and by Mgr. Osouf, in French.

Some weeks ago we published some interesting particulars regarding the peculiar virtue attributed to the Eucalyptus or Blue Gum Tree. From *Nature* we learn that, in addition to its other properties, it is said to possess the valuable one of checking fire. "Encalyptus shingles are said to be fire proof. A tree of this species was exposed to the San Francisco fire of 1876 and is still flourishing. The notion is urged that the spread of fires in cities is checked by setting out such trees for shade and ornament. All varieties of the Eucalyptus are said to possess this valuable property." If such be the case the Japanese ought to do all in their power to promote the growth of this valuable tree, and thus do something towards checking the terrible conflagrations by which their towns are so lamentably often devastated.

A recent number of *Nature* announces the death of Mr. Robert Swinhoe F.R.S., of the China Consular Service. In 1860 Mr. Swinhoe was appointed Vice-Consul at Taiwan, Formosa, and to the full Consulship in 1865. In 1866 he was removed to Amoy. In 1871 he was Acting Consul at Ningpo, and then at Chefoo, where he remained until the October of 1873, when he had to retire from the service on account of ill health, dying on the 28th October last. Mr. Swinhoe will be best remembered as an ardent student of natural history, and to his researches, and to those of a fellow worker, M. Armand David, much of the knowledge of the fauna of China is due, which before the investigations of these gentlemen was supposed to possess little interest, all indigenous species having been destroyed by the teeming population. That Mr. Swinhoe proved the fallacy of such assumptions will be seen from the following extract:—

Mr. Swinhoe was a Fellow of the Asiatic Societies of China and of Bengal, as well as of many other societies, having been elected into the Royal Society in 1876.

By far the majority of Mr. Swinhoe's scientific communications—fifty-two in number—mostly on the mammalia and birds of China, are to be found in the *Proceedings* of the Zoological Society of London between 1861 and 1874. Other papers appeared in the *Ibis* and the *Annals and Magazine of Natural History* within the same period. Among the most important of these are the "Catalogues" of the mammals and birds of China and its islands, in which are to be found descriptions of many new species of both classes, among which are St. John's Macaque (*Macacus sancti-johannis*), the Water Deer of Shanghai (*Hydropotes incruris*), the Mantchurian Deer (*Cervus mantchuricus*) Orange-bellied Helictis (*Helictis subaurantiaca*), the Superb Flying Squirrel (*Pteromys grandis*), Boyce's Stork (*Ciconia boyciana*), together with a great number of other birds, for a complete account of which we cannot do better than refer our readers to a work upon the birds of China, by M. l'Abbé David and M. E. Oustalet, published at Paris a week ago.

Michie's Deer (*Lophotragus michianus*) is the name given by Mr. Swinhoe to a small deer from Ningpo, with antlers more diminutive than many other species. This, or a very closely-allied species, was previously sent to Paris by Père David. and described by M. A. Milne-Edwards under the name *Elaphodus cephalophus*.

Mr. Swinhoe, besides the collections which he made, was indefatigable and particularly successful in his endeavours to send living animals from China to this country, and there are many species, including *Cervus swinhoii*, *Hydropotes incruris*, and *Ciconia boyciana*, which were first procured by him.

It will be some time, we fear, before so enterprising a naturalist as Mr. Swinhoe takes up his residence in China, and employs every available opportunity for the prosecution of his favourite line of research.

The *Chôya Shimbun* states that an the force of police in Yamagata *ken* has been increased by one hundred men, and that the extra expenses of the force in Owake *ken* for the past year amount to 17,330 *yen*.

We have just received the December number of our whimsical contemporary *Punch*—the "decumane number" as he is pleased to call it. The rest which his late unfortunate accident compelled him to take, has evidently been fruitful of the happiest results, and in the present issue we see our old friend thoroughly rejuvenated, and giving ample proof that time has not dulled his wit, neither has his hand lost its cunning. It is in every way worthy of the *Punch* of our griffin days.

We have received the Sixth Annual Report of the Postmaster General of Japan for the year ending June 30th, 1877. We shall take an early opportunity of passing it under review, but space forbids us at present to do more than acknowledge its receipt.

The Agent of the Northern Telegraph Co. informs us that the cable between Nagasaki and Vladivostock is interrupted. The Southern line is in working order.

From the "Japan Mail Daily Advertiser."

Monday, 24th.

The *Genkai Maru* was towed from Yokosuka on Saturday afternoon; where she has been fitted with new boilers and received a thorough overhaul.

The second performance of Mr. Whites' acrobats took place on Saturday evening before a fairly good house. With a few exceptions the feats were the same as on the first occasion? All of which were done really well, especially the swinging on the cross ropes and balancing on the bamboo which must be seen to be appreciated.

The Southern railroad seems to be less successfully managed than the line between this port and Tôkiô, as we see by the *Osaka Nippo* that on the 18th instant a special train which left the Shichijô station at Kiôto at 7.55 a.m. before arriving at Mukô-Himachi station ran off the track, thus causing about two hours delay.

The *Nichi Nichi Shimbun* of the 22nd announces the eggs of 308,130 unsalble silk cartons, now stored at the *Machigaisho*, are to be scraped off from the cards and destroyed within three days from to-day.

From he *Hôchi Shimbun.*

The Government has given an order to the Bureau of History in the Daijôkuan to compile a work on the recent rebellion Kiushiu from all documents relating to the above affair.

Certain merchants of Kobe chartered, for the sum of 2,000 *yen*, the English sailing vessel *Eurigo* to bring some goods from Kobe to Yokohama. The goods arrived safely on the 14th instant and 500 *yen* on account paid at Kobe with the agreement that the remainder should be paid in Yokohama, but on the arrival of the vessel at Yokohama, the Japanese merchants could not raise this sum, and although eight or nine days have passed it has not yet been paid. The Captain has informed the merchants that they are subject to a demurrage of 60 *yen* for every day's delay.

A fine tomb is to be erected over the remains of the late Seikuan In-no-Miya (the concert of the late Shôgun Iyemochi) at the cost of ten thousand *yen*.

From the *Akébono Shimbun.*

At Okurairi, in former Wakamatsu *ken*, a policeman was on his rounds from village to village when it commenced snowing. On seeing the foot marks made by the boots of the policeman, the people said that some strange animal was roaming about the neighbourhood, and many of the hunters in the neighbourhood loaded their guns and assembling to the number of about one hundred and followed the foot marks. The hunting party found that the foot steps which they traced led them to the residence of the chief man of the adjoining village. They all stood in front of the house, none of them being brave enough to enter, the villagers and the farmers expressed with grief to each other that all the inmates of the house had been eaten up by the beast. At last one more bold than the rest, volunteered to take a peep into the house and asked the others to have their guns ready. When this daring one peeped in he saw a policeman warming himself at the fire place. So they returned to their homes in gladness.

Wednesday, 26th.

After all her mishaps, the unfortunate steamer *State of Alabama* arrived at Hongkong on the 15th instant, and by late advices was to leave for Shanghai on the 18th.

The *Glengyle* also arrived at Hongkong on the 16th, and was to leave for Shanghai on the morning of the 18th.

From the *Nichi Nichi Shimbun.*

It appears that the Chinese Ambassadors intend to live at the house formerly occupied H. E. Ito, now the property of Masuda Takashi, at Goten Yama, Shinagawa, Tôkiô. Dr. McCartee with some officials of the Foreign Office, went to inspect the house on the 24th instant.

The Judicial Department has established an office where those who wish to become public attorneys are to be examined.

The *Nichi Nichi Shimbun* gives the following list of National Banks in Japan, with the amount of their capital, etc:—

Denomination and where established.				*Capital.*	*President.*
The	1st	National Bank	Tôkiô..... *Yen*	1,500,000	... Shibusawa.

In all 25 Banks, having a gross capital of 22,726,100 *yen*.

From the *Akébono Shimbun.*

The Chinese Ambassadors, Dr. McCartee and a few members of the suite, visited H. E. Okubo, the Minister of Finance, at his residence on the 24th instant.

From the *Akébono Shimbun.*

Ex-*Sangi* Soyejima intends to form a mercantile company in China.

From the *Hôchi Shimbun.*

Of the three millions of families in Korea, three millions of persons are said to have died through the famine last year.

Thursday, 27th.

We are without our usual San Francisco files by the *City of Peking*, and are therefore indebted to a private source for the few telegrams we are able to publish.

The third performance of the Japanese Troup of Acrobatic Artists at the Gaiety Theatre was fairly well attended, but not so well as the excellence of the entertainment warrants. The feats, wonderful in themselves, are executed with that finish, ease, and grace which lends such a charm to Japanese performances of this kind, while the spectator's pleasure is not in any way mixed with that fear of accident and bodily danger to the artists which is too often called forth in witnessing the not less clever, but more fool-hardy acrobatic tricks of European performers. A kind of trapeze business is something entirely new to us, and is remarkably clever, and the performance, indeed, from beginning to end is so good that it deserves to receive the patronage of the community.

From the *Akébono Shimbun.*

On the 25th instant the following sentence was passed upon the Satsuma rebel Nakayama, at the Special Kiushiu Court established at *Genrô-In*, Tôkiô:—"Nakayama Takamori, a *samurai* of Kagoshima *Ken*. You while acting as a police sergeant of the 3rd class in the Kagoshima *Ken*, by order of Nakajima Takehiko, the chief of the station, cruelly put Nakahara Hisao and others to torture, and forced them against their will to append their seals to the confessions drawn up by Nakajima and others. Moreover, you joined in the treason of Saigo Takamori and had charge of the transportation of the supplies of the rebels, and also collected troops to fight against the Imperial army. For these acts you are deprived of your rank and sentenced to hard labour for ten years." Other Satsuma *samurai* were also sentenced; Ebihara to one year's hard labour; Kunai to five years; Shiba, Miyo, Kodachi and Kôno to three years' hard labour, while Furukawa and Taniguchi were pardoned.

Nakahara Hisao and twenty-one others, who were accused of having determined to attempt the assassination of Saigo and other Satsuma leaders, were cleared of all suspicion of being implicated in such a plot,

Friday, 28th.

Messrs. Norton and Steele's troup of "Merry Makers" arrived here by the *City of Peking*, and intend to give a series of their Minstrel and Vaudeville entertainments at the Gaiety Theatre, the first of which will take place on Saturday evening next, the 29th instant. This troupe has been highly spoken of by the English and American press, and we have no doubt their performances here will be well worth visiting. We wish them every success.

The Tôkiô *Saibansho* closes to-day for the usual vacation, which formerly used to commence on the 25th of December.

The *Hôchi Shimbun* says that the Satsuma people used to be falsely accused of indulging in dog's flesh, but since the war the distress in Satsuma has been so great that it really has been used as food.

From the *Chôya Shimbun.*

On the 21st instant one thousand five hundred policemen, who returned from Kiushiu under the command of Police Inspector Watanugi, were drawn up in line at the gardens of the Fukiage Palace, where H. M. the Mikado addressed a few words to them, in recognition of their services during the late war.

The *Daijôkuan* notified the *Naimushô* on the 25th instant, that the annual allowance for the expenses of the police in Kôchi *Ken* (Tosa) would be increased to 43,068 *yen*.

Saturday, 29th.

The Chinese Ambassadors were received by H. M. the Mikado yesterday, and presented their credentials.

Messrs. Norton and Steele's troupe of "Merry Makers" give their first performance at the Gaiety Theatre this evening, and we hope will be rewarded by a bumper house.

The *Hôchi Shimbun* announces that the King of Loochoo will shortly visit Tôkiô, travelling from his kingdom in the *Taiyu Maru.*

The *Akébono Shimbun* states that Nakahara Hisao and the others, having been acquitted of all suspicion of complication in a plot to assassinate Saigo and other Satsuma leaders, have been restored to their former positions in the police force.

From the *Chôya Shimbun.*

The confessions of the rebels Nakayama Moritaka and others, together with full particulars of the trial of Nakahara Hisao and others, are to be printed and published by the Special Kiushiu Court.

From the *Akébono Shimbun.*

The Bonin Islands are to be surveyed. A branch *Saibansho* is to be established there, and the Islands will attached to one of the *Kens*, so as to be under its jurisdiction. There are at present five Japanese officials stationed at the Islands, and four Japanese policemen.

THE NEW YEAR.

YET a few revolutions of this tireless globe and another year will be added to the endless list of those that make up the past. 1877 will hardly be marked with white in the calendar of the world, or be looked back to with any gladness either by Europe or Japan. The storms of the physical world seem to have found their echo in the tumultuous passions of men, and the less happy moods of nature that the present year has witnessed have had their counterpart in the violent movements of mankind. Tempests, hurricanes and inundations have devastated whole regions, while even more terrible droughts have dried up the face of the earth and slain by a cruel and lingering death thousands of human creatures. But nature, ruthless as she has been, has been less pitiless than man, and the hapless multitudes whose bones whiten the defiles of the Balkans are the victims of the ambitions and the fanaticism of their fellows.

On the threshold of another year, we naturally pause for a moment ere we step into the unknown future, pregnant we cannot tell with what happiness and misery, and leave behind for ever the irrecoverable past, to take a hasty glance at the events of the twelvemonth that is slipping from our view, and hazard a wistful look into the dimness of the new epoch whose birth is at hand. It is fortunate that the coming year is not the mere sequel of its immediate predecessor, but the outcome of all precedent time, a *livraison* of the great book of history, whose contents may in some sort be divined, not from a perusal of the one to which it succeeds, but from a consideration of all antecedent portions of the record. The closed chapters of the world's history maugre their tale of crime and error, teach us the grand truth embodied in the beautiful myth of Pandora, and the world, shocked by the record of human misery, is yet justified by the whole experience of the past in nourishing hope for the future. In vain does mankind strive to render useless the beneficence of Nature, in vain do the nations of the earth make themselves the ministers of death and destruction, or essay by a selfish and narrow policy to hinder the development of the principle of fraternity, which alone can bring about the solidarity of interests that must precede the abolition of the barbarous militarism that constitutes the shame of the nineteenth century. The advance of the world in humanity and civilisation is slow but sure; despite many and grievious backslidings, there is an irresistible though unequal march onwards towards a better state, never the best attainable, but which, we may be sure, once realised affords mankind a wider outlook and a higher standard, never afterwards to be otherwise than temporarily narrowed or lessened.

For ourselves, all more or less directly interested in the prosperity of this country, the ensuing year presents a fair promise of improvement over that now close upon its death. The dangers incident to the infancy of a new nation have been well won through, and the successful quelling of the Satsuma rebellion has removed the last peril that beset the reconstructive efforts of the Government, while the rare moderation of the victors has not only affirmed their power but has signally proved their capacity as wise administrators after the best western model. The Japanese are far from being the angels their worst enemies under the assumed guise of friendship love to

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

depict them, but the history of the Satsuma rebellion is, so far as the Government is concerned, one of the brightest pages in modern annals, and the humanity and prudence which have characterised the policy of the Imperial advisers towards the insurgents, both during and after the final collapse of the insurrection, constitute a strong claim on the part of Japan to the enjoyment of the full sovereign rights that are conceded even to the pettiest and most turbulent of South American republics; while the best assurance of an enlightened treatment of the difficult questions that the ensuing year may witness the discussion of, is afforded by the good sense displayed in connection with the Satsuma outbreak. These questions must be approached in a fair and moderate spirit on both sides, and despite the petulance of Japanese editors we have great hopes that the Government will neither be exorbitant in their demands nor illiberal in their concessions. They have gained the respect of the whole world, let them not forfeit it by an unwise adoption of a restrictive policy, distinctive of the barbarous ages of European history; a policy that cannot but tend to cramp the national life and dwarf the national conscience by inaugurating a system of isolation involving a return to the principles of the Tokugawa Shôgunate, in plain and positive contradiction to the spirit of the nineteenth century. Let the Government use their foreign advisers as sources of information, and base their policy wholly upon their own appreciation of the needs and interests of the country. They will thus, we feel confident, be led to a right decision in the end, and the intercourse between Japan and the rest of the world will be, not restricted by a foolishly selfish, but aided by a wisely liberal treatment of the questions that the approaching Revision of the Treaties will give rise to.

Finally, whatever the New Year may bring forth we must face the future resolutely. The earth is not less fruitful than of old, and the folly and perverseness of mankind are not absolutely constant terms. Men must work and women must weep to the end of time, but the work is not always without its reward, and the tears are succeeded by smiles.

Difficulties often loom larger through the mist of the future than their actual proportions warrant, and fortune, like a bully, not unfrequently fawns upon those who despise her threats.

" Biancheggia in mar lo scoglio,
Par che vacilli, e pare
Che lo sommerga il mare
Fatto maggior di se.
Ma dura a tanto orgoglio
Quel combattuto sasso;
E'l mar tranquillo e basso
Poi gli lambisce il pie."

The whole commercial world has had to endure a depression of four years' duration, and in Japan special causes have operated in producing a local aggravation of an universal evil. But some of these exist no longer; there are signs in Europe and America of the advent of a more prosperous era, and if we are prudent we may at the end of 1878 have reason to congratulate ourselves upon a more fortunate year than the one now closing. We most heartily hope such may be the case, and are prepared to welcome the coming year in the trust that neither the folly of men nor the unkindness of Nature may prevent it indemnifying us for the lean years we have passed through.

PROTECTION IN ENGLAND.

IT is not difficult to understand the dead set made at the commercial system of England by those countries that have delivered themselves over, bound hand and foot, to the anachronismal demon of Protection. One has only to be better than one's neighbour to incur the accusation of being actuated by the worst motives. The simplest actions are looked upon with a distrust, not wholly feigned, and a policy the opposite of that followed by the detractors is sure to be execrated in proportion to its success. Thus the people of Great Britain are quite accustomed to hear themselves held up to the common hatred of the world as perfidious, ravenous, and unscrupulous apostles of the detestable and hypocritical doctrines of Free Trade. Free Trade stinks in the nostrils of Protectionists, not simply as a commercial heresy, but as part of a deliberately immoral commercial system, adopted by the strong with the express object of ruining the weak. No attempt is ever made to demonstrate the selfishness of an economical doctrine that places not the slightest obstacle in the way of the foreign trader, and permits him to compete in our own markets upon equal terms with ourselves. It is simply asserted that this seeming generosity masks a fell purpose, and that the whole commercial and political public of Great Britain are engaged in a vast conspiracy to ruin every nation they have intercourse with, by inundating them with cheap cottons and hardwares. The next generation, or, at furthest, the next generation but one, will recognise the singular wisdom and liberality of the British commercial policy of to-day, and wonder at the strange lapse of most of our contemporaries into economical practices retrograde on their character, and, in direct opposition to the current political thought of the period, sacrificing the interests of the many for the profit of the few. But for the moment we must bear the obloquy with such equanimity as we can command, and look to the applause of the future to indemnify us for the injustice of the present. In the long run the truth is sure to obtain full recognition, and the world will cease to find in the abolition of restrictions npon commercial intercourse the proof of a desire to monopolise trade. While most of our rivals are content to rail at us as Free Traders, it has been reserved for Japan to discover that we are not really free traders at all, but Protectionists of a pronounced character, and the recent utterances of the press of this country show to what a marvellous extent ignorance and malice can alter the import of the simplest facts. The tariff of Great Britain is, with an amusing confidence, cited in illustration of the novel thesis. Now that tariff is with a few wholly unimportant exceptions, which we shall presently note, absolutely nonprotectionist, and it may be worth while to demonstrate this truth at some little length.

Excepting tea, tobacco and alcoholic liquors or derivatives, there are but nine articles of produce or manufacture subject to duty in Great Britain. Of these three only, pickles which pay a nominal duty of one penny per gallon, playing cards which pay a little over threepence a pack, and gold and silver plate are manufactured in the United Kingdom. With the sole exception of plate, on which is levied a duty of seventeen shillings per ounce Troy, if gold, of one shilling and sixpence if silver, it can hardly be said that British manufactures are protected. Why so heavy a duty should be paid by plate we are unable to understand;

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

the supposed desirability of taxing luxuries may possibly explain it—in our opinion a wholly insufficient reason, for excessive taxation of luxuries confines the enjoyment of them to the wealthy, without sensibly adding to the revenue. Of the remaining articles included in the tariff, coffee is, we believe, the only one produced within British dominions, and as precisely the same duty is charged on it whether imported from a British possession or not, it is clear the duty is in no way of a protective character. Tea pays sixpence a pound—a high duty which all parties in England are desirous of abolishing. But apart from alcoholic liquors, tea is the only article included in the tariff by taxing which the working classes can be compelled to furnish a contribution towards the expenses of the state, so long as no income tax is paid upon incomes of under £150 per annum. If while the income tax remains unaltered the duty on tea were taken off, the artisan or labourer would practically pay nothing whatever to the state, for the internal revenue collected upon railway passenger fares, and by means of the stamps duties and the duties on such tobacco as the labouring classes use, is hardly a burden upon the working man. Whether the tea is the produce of China, Japan or of a British possession, it pays precisely the same duty, and our teaplanters in Assam are not in the slightest degree protected against the competition of other tea producing countries. The same as the case with tobacco, very little indeed of which article is grown in any British Colony, while within the United Kingdom its cultivation is absolutely prohibited. If the protective principle is applied at all in the instance of tobacco, it is applied as against ourselves in favour of tobacco producing countries. Alcoholic liquors, again, pay a high duty, but the excise levied upon these within the United Kingdom is almost equivalent to the duty imposed upon them when imported. Thus the British manufacturer has no real protection against the competition of his foreign rival. There is a difference of threepence per gallon in favour of spirits of colonial manufacture, and to this slight extent the colonial manufacturer may be said to have an advantage,

It is clear then, that, with the very unimportant exceptions we have mentioned, the principles of protection have been wholly abandoned by Great Britain. The Customs are (with the exceptions referred to) regarded purely as a source of revenue, not in the least as a means of protection. Her industry stands on its own merits; she has learnt that with nations as with individuals an intelligent generosity is in the long run the best policy, and offers to every nation a freedom of commercial intercourse which no nation accords to her. The policy of isolation is a contemptible one, and is recognised as such by the best minds of every civilised people.

SPIRIT OF THE JAPANESE PRESS.

THE KIUSHIU SPECIAL COURT.

("Chôya Shimbun," 23rd to 25th December.)

The task of suppressing an insurrection by fire and sword is not so great, as the difficulties which present themselves in meting out punishments to those who were concerned in it with such impartiality, that the offenders shall be made to feel that they acted wrongly and that the justice of the sentences passed on them shall be acknowledged in the future.

At the commencement of the present year the *samurai* of Satsuma broke out into open rebellion against the Government, but the latter acted with such promptitude, and the officers and men of the Imperial army displayed such bravery and judgment, that the power and daring of the rebels were checked before they gained full headway, and the disturbance was thus confined to four provinces. The insurgents had everywhere to retreat before the victorious Imperialists, and at Shiroyama the whole of the remaining rebel army was annihilated. Great credit is due for its speedy suppression, but as the whole country was fighting against the rebels, it was known from the first who would prove the stronger. The suppression of the Satsuma rebellion cannot therefore be deemed an act of the highest merit on the part of the Japanese Government. Still the manner in which it has treated the conquered is much to its credit, and we trust that all its judgments of rebel prisoners will be guided by the same spirit of justice, so that it may bear a good name in the future, and that the praise called forth by the merits of the army may pale before the admiration which it shall command for its treatment of the prisoners.

When the troops were sent to the South, the power of passing sentences on the rebels was placed in the hands of the Imperial Commander-in-Chief, and hence the establishment of the Special Kiushiu *Saibansho*. Mr. Kôno Toshikama, a member of the *Genrô-In*, has since been ordered to take charge of all matters relating to the trial of rebel prisoners while certain judges and other judicial officers have been appointed to the *Genrô-In* in order to assist him.

It is the duty of the *Daishin-In* (the Supreme Court) to try cases and to pass sentence, but when treason is involved special Courts are established to meet the requirements of the case, examples of which have already happened. But how is it that in the present case the trial of these men has been trusted to officials of the *Genrô-In*, whose duties are only legislative? Can it be that there was such a paucity of men in the *Daishin-In* and the *Saibansho* that Mr. Kôno and the others with him, who have great experience in law, got up a Special Court, and put the whole matter in charge of the *Genrô-In*. Supposing this to be actually the case, we cannot understand the reason why the judges and the officials of the *Daishin-In* should first have been appointed to offices in the *Genrô-In* and then commissioned to conduct the trials in the Kiushiu special *Saibansho*. But this is probably done in order that the Government may not be suspected of any injustice in the future.

In all civilized countries the greatest caution is exercised in conducting the trials of traitors so that the Government may not in the future lie under the imputation of exerting its power to oppress those who have rebelled against its authority. Wrongs suffered from Ministers can be complained of to the National Assembly which possesses the power of investigating the acts of officials

In the recent Satsuma affair, actual treason is shown, and the trials must be conducted with the greatest care. Moreover there are various opinions with regard to the cause of Saigo's rebellion. At all events the reason alleged by Saigo as the true cause was that Okubo, the Minister of the Interior, and Kawaji, the Chief of Police had sent Nakahara Hisao and others to assassinate him, the then Commander-in-Chief of the Japanese Army. It was of course necessary for the Government to suppress the rebellion by force, but in taking a simple view of the facts, Saigo has accused two prominent members of the Administration of a crime. Thus on one hand it was necessary to send the army to suppress the rebels, and on the other to have the officials tried before a legislative body in order that the minds of the people might be cleared of all existing suspicion.

Do the people remember the pretext given by Saigo Takamori for taking up arms? Oyama Tsunayoshi, the then Governor of Kagoshima *ken*, notified to various *ken* that Police Sergeant Nakahara Hisao and others had returned to their homes, bearing a secret order to assassinate the Commander-in-Chief, and that Saigo at the head of an army would proceed to the capital to demand an explanation from the Government.

During the war the minds of the people were occupied with the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

conflict and they took very little heed of the above facts, and when peace was proclaimed they were so rejoiced that they thought very little more about the matter. But now they will gradually begin to reflect whether these reports are true or not.

We cannot think that Saigo's rebellion was the work of a day or two, but as his views differed from those of the Government that he intended to rise on the first opportunity. As for the secret orders given to Nakahara, the story was made up as a pretext for Saigo's action and those who are aware of the existing state of things do not believe that it is true. But the reason why investigations should take place is that the Government may be cleared from the stain of suspicion. Assassination is resorted to in uncivilized countries, but abhorred by civilized nations, so that when assassinations take place one is grieved to think that cowards capable of such actions exist, and when such foul acts are attempted by prominent men, no words can describe their baseness. Before a country becomes civilized assassinations often occur, and many cases are recorded both in Japanese and Foreign histories. But in Europe and America they are no longer tolerated, the people of those countries maintaining that the greatest of evils arise from these the vilest of acts. Assassins maintain that though they act wrongly good will result. But under such circumstances officials are prevented from making proper use of their abilities. The Japanese Government having seen the error of assassination, punished those who attempted the life of Iwakura *Udaijin*, and is still in search of the man who murdered the *Sangi* Hirosawa.

Thus there cannot be the least doubt that no secret orders for the assassination of Saigo Takamori were issued. But among the masses there may be some who think that what the Satsuma rebels said is true. Moreover in view of our foreign intercourse, when foreigners observe with such attention what transpires in our country, we have no idea in what light they might view all this. Therefore to convince both our own and foreign nations that the Japanese Government is worthy of confidence, the trials of these men must be conducted on the fairest principles. The Government has also seen the necessity of this, and have had Nakahara and others examined. We are pleased at the caution displayed and foretell that the day is not far distant when the innocence of Nakahara will be made known.

OUT OF BOUNDS:

Being an Account of a Recent Trip into Shinshiu.

(Continued.)

The next morning, as I had anticipated, owing to the previous night's unwilling dissipation, I did not get away until late from this unconducted, forlorn, bathless, masterless, mistressless hotel, my young host attentive and polite to the last, and the five old women sitting as calm and unconcerned as the Fates, at their work of unripping and remaking old garments. For the first *ri* the road was somewhat heavy from the rain of the previous night, but after that it was of firm white sand, winding through scented pine forests and scattered groves growing daily more brilliant in autumn glory. At several points the road had been swept away, and the adjoining land covered with rocks and sand, sometimes for a breadth of half a mile, by the torrents that had poured down from the hills. The mountains loomed cold and sullen through the gray atmosphere, which threw up the varied colouring of the foliage with startling brilliancy, affording many a tempting subject to the painter. My destination was Ōmachi, distant nine and a half *ri* from Matsumoto, which I was informed was the only place where I could find decent accommodation in this little travelled region. The villages through which I passed no longer displayed the air of neatness and comfort which I remarked on first entering Shinshiu, but again presented the usual tumble down plank-and-paper aspect of the ordinary Japanese village. The people, however, in this part of the country are a remarkably sturdy, well looking lot, with clear ruddy complexions, and fair skins, though it cannot but be regretted that measures are not taken here, as elsewhere in Japan, to remedy the pocket handkerchiefless condition of the children. Many of the men are tall and well made, and appear to be a far stronger and better grown race than those I have seen in other provinces. The dress of the farming class is also somewhat different, both men and women wearing trousers, called *Yuki bakama* which are made full to the knee like the ordinary *hakama*, and then tight to the calf. It is thus almost impossible, when the heads are covered, to distinguish the male from the female portion of the community. From the sensation that my appearance evidently produced, I conjectured that foreigners' visits had been few and far between in this remote district, and on enquiry I found this to be the case. I remarked also that the people, although perfectly polite, were free from the usual servility of manner, and had more of that air of sturdy independence which one almost always find among mountaineers. The road, although as I have said broken up in parts by floods, is fairly level and very good, and *jinrikshas*, one of which conveyed my baggage the whole distance for sixty *sen*, ply over it. As one approaches Ōmachi the valley narrows, and through it tumbles the turbulent Takasegawa, which though not very wide when I crossed, shewed by the immense area of its rock strewn bed and the remains of former bridges, that when opportunity offered it could become a very formidable torrent indeed.

I reached Ōmachi just as the gloom of evening was deepening into night. A threatening, lead coloured night too, with now and then a spatter of rain and a cold damp gust from the sullen mountains that brought to mind Campbell's well known lines.

'For pallid Autumn once again
'Hath swelled each torrent of the hill;
'Her clouds collect, her shadows sail,
'And watery winds that sweep the vale
'Grow loud and louder still.

Ōmachi consists of two streets, a long, narrow and dirty one out of which runs at right angles a long, broad and clean one, with a clear mountain stream running down its centre, confined by a deep, stone built channel. About two thirds up this street on the left was the hotel, not a very inviting one to judge from the entrance, around which stood a number of pack horses and which had the look of a common country shop. I was agreeably surprised, however, on being conducted up stairs at the back of the house to find extremely well appointed and comfortable rooms, while the reception given me by the master of the inn proved to me at once that my lines had fallen in pleasant places, and this was fully confirmed by his subsequent treatment of me. Nothing was wanting on the score of cleanliness or attention. The *tamagozaké* was made to perfection, and the supper plentiful, varied, and to a man as hungry as I was, delicious. Even my servant exclaimed when he saw it, that it was indeed good to be here, and that we might do worse than tarry many days in such a house of plenty. Among other good things served to us were some capital little birds—*hi-wo-dori*—a "most toothsome morsel," as I find I have written in my diary. They are about the size of an English starling with long tail and dark, leaden coloured plumage. They were sent up split in half and fried, having been slightly sprinkled with soy. Cooked in foreign fashion I should think they would be delicious. Large quantities of them are caught in this part of the country, and at every inn or eating house I saw bunches of them hanging up. There is also another kind rather smaller with brown plumage, which I ate elsewhere, but which, possibly from want of skill in the preparation, were not as good as those at Ōmachi.

Do you know, by the bye, what is *tamagozake?* Then let me hasten to inform the future traveller that he may learn wherewith he may comfort his soul when he is "a man that hath no whiskee" and seeketh some spirituous solace on a cold night after a hard day's work. It is Japanese *saké*, with which the yolks of two new laid eggs are carefully mixed, and sweetened with white sugar. It is served hot, and the test of its perfection is that the eggs shall be perfectly mingled without curdling. I found it not only entirely harmless, but wonderfully comforting on cold nights, and admirable as a restorative after hard climbing and exposure.

At Ōmachi I stayed two days, and had the season been less advanced should have remained longer and made some excursions to various peaks which have never yet been trodden by a foreigner. They all, however, required that one should go provided with the means of camping out for one or two nights in the open air, and also a larger expenditure of energy than I had either time or inclination to give. I therefore confined myself to short excursions and to sketching the wild and beautiful

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

scenery in the neighbourhood. The forms of the mountains are bold and grand, and there is a very Swiss look about the place as their purple scarred sides streaked with the early snows rise above the brown eaved houses and the dark fir woods. The beauty of the autumn coloring exceeded anything I had yet seen, the gnarled trunks of the pines being covered with creepers which dressed them in robes of vivid carmine and orange. The paths, too, are excellent, as they are of hard white sand, so that there is an entire absence of mud even in the heaviest rains.

Thus my two days passed only too rapidly, and I left the place with reluctance, my stay having been marred by one untoward circumstance only. And my suffering was entirely of my own seeking, for the same spirit which compelled Robinson Crusoe to wear a shirt when on a desert island, would not permit me to go unshaved even in the wilds of Shinshiu. My razors having suddenly become blunt with that same perversity which induces buttons to come off or bootlaces to break when assistance is impossible, I called in the services of a native barber. I found that the knight of the razor at Ōmachi was a woman, and with many misgivings did I entrust my face to her tender mercies. What saint it was who was flayed alive I cannot remember, but while she shaved I thought of that unfortunate, and of Marsyas, and of the archer who shot Cœur de Lion. I know, too, that I called on saints not in the calendar, and that if my tormentor had understood plain Saxon she would either have cut my throat on the spot, or have dropped the razor in terror and fled. My servant disappeared, and when I asked the reason of his thus abandoning me he touchingly replied, "I could not bear to see you suffer?"

And I did suffer, and doubtless must have been a very unbearable object while undergoing the torture. Not content with nicking and chopping and scratching and scraping my unfortunate face, and plucking out bristles by the roots, to say nothing of drawing upon the resources of her mouth when Euxesis proved insufficient for her fiendish purposes, she endeavoured to shave my eyebrows. When I objected to this she proceeded to operate on the nape of my neck. Driven thence she made my blood curdle by twiddling the razor in my ears, and then as a final horror, she played it skilfully in each nostril, causing me to shudder and sneeze in so violent a manner that it is a mercy some lasting injury did not result. And all this misery she was willing to inflict for the small sum of one *tempo*. The most irritating part of the proceeding was that she laid all my sufferings to the Euxesis, or "soap" as she was pleased to call it. How Japanese human nature can endure unlathered shaving I am at a loss to understand.

Each evening my room was the rendezvous of the heads of the village, who crowded in with minds full of wonderful treasures concealed in the mountains, "which the gentleman had doubtless come to explore" and with hands full of mineralogical rubbish "which doubtless the gentleman knew all about." One man had indeed a very interesting collection of specimens, most creditably got up, neatly arranged in a number of trays, each specimen labelled with the name of the district where found. Some of the stones were very curious and the owner claimed that he had specimens from every part of Japan. From him, too, I learned the true story of the wonderful diamond. It had been found by a farmer who had picked up a singular looking oval stone. Breaking it open, out dropped what he at once knew to be a diamond as it sparkled and would cut glass. All who saw it were astonished and were convinced that its value was enormous. The fortunate finder had forwarded it to Tôkiô and was expecting to receive news of its having been sold for an enormous price, as it had been pronounced there a genuine diamond. I have made a calculation since my return,—for I am not ashamed to say that I could not at once reduce *momme* into carats, without books of reference—and find from the figures given me that the weight of this jewel is four thousand three hundred and twenty nine carats, for which I trust the owner will receive a fair price. From what I could glean a brisk search was going on after more diamonds of similar magnitude, but unfortunately none were discovered whilst I was in the neighbourhood, or I should have purchased them on the spot.

My informant was very anxious that I should make an excursion to Kurotake, the highest point of the range of mountains lying between Hida and Shinshiu. It is distant a little over twelve *ri* from Ōmachi, and the scenery is, I was informed, extremely wild. It has, I believe, been once visited by a party of foreigners, who did not however attempt to reach the summit. For those fond of mountain climbing Kurotake would prove very interesting, as there is glory to be gained in overcoming the difficulties of its ascent and the view from the top should be superb. Crystals, white, pink and black, are found there in great quantity, one of the wonders expatiated upon being the wall of black rock from which they can be dug. The people all seemed mad on the subject of diamonds and diamond hunting, and could not be induced to believe that I had any other purpose in visiting their neighbourhood. They are convinced, they say, though I could not ascertain on what grounds they founded their belief, that diamonds exist and that they have been found. All my enquiries however failed to discover where, and no one could produce a specimen of what was supposed to be the precious gem. They also maintained that gold and silver exist in large quantities. A specimen of silver ore I was shown, but nothing at all resembling gold, though it is quite possible that it may be contained in these mountains. But in talking about these matters they were like children, building castles with their prospective riches. Poor things, one could not help wishing that in the future a little more of the "precious dross" may come from some quarter or another into their possession, giving them the means of becoming better clothed and better fed, and creating a want for that which does not seem to exist in the country districts of Japan, common comfort of living.

For what of comfort does the average Japanese know? While there is an almost utter absence of the keen piercing misery among the lower classes which is so sad to witness in most of the European countries, there is yet an equal absence of what we understand by comfort among the fairly well-to-do classes, such as small merchants and shopkeepers. Away from any of the great centres one scarcely ever sees a sign of foreign intercourse, or any change in the mode of living from that which has probably existed for centuries. The discomfort in which the people are content to live does not seem to be so much the result of poverty, (for although there is doubtless a sad dearth of money throughout the country, of absolute want or wretchedness as we understand the terms there is little trace) as from ignorance of anything better, and the absence of all apparent desire for increased comforts. But in this respect the people are strangely apathetic. All the members of a household are content either to sit shivering, with the tips of their fingers burning over the embers in a *hibachi*, and remarking to each other how cold it is, while these is wood in abundance to be had for the picking up, or else to remain blinded in a cloud of smoke from the open fire in the *irori*, because there is no chimney, while the paper on the slides is in ribbons, and the freezing wind finds its way unhindered to all parts of the house. Imagine the dolefulness, the weariness, the utter, useless wretchedness, in which the winter evenings are passed, with no light but that from the lamp which makes darkness visible, and no fire but that I have described. There is no conversation, no book, no life, no mirth; and so from year's end to year's end run out the gentle and harmless, but unenjoyed and profitless lives. If there be an absence of keen discontent, there is an equal absence of all that makes life worth the living. While there may be little positive wretchedness, household comfort in any sense is unknown and unsought for except in the large cities.

The Peiho river is now closed, and all the steamers engaged in the northern trade are either confortably laid up for the season, or seeking employment in other directions.—*Shanghai Courier.*

We learn that the refugees spoken of as on their way to Shanghai have begun to arrive, and that between two and three hundred are sheltered in an old temple at the South Gate. The authorities have with commendable promptness given them assistance, 40 *cash* to each adult and 20 to each child. Their clothes are old and ragged, and there is no sign of beds or bedding. But if the Chinese authorities give them as comfortable mat sheds as last year and regular rations, daily, their most pressing necessities will be cared for. It is to be presumed that the present Taotai will follow the example of his predecessor.—*S. C. & C. Gazette.*

THE CASTLE OF YEDO.

By THOMAS R. H. MCCLATCHIE,
H. B. M.'s Consular Service, Japan.

Read before the Asiatic Society of Japan, on the 22nd December, 1877.

Hardly any foreign traveller coming to Yedo can have failed to pay a visit to the Castle, which forms so large a portion of the city itself. Those, in particular, who have had the good fortune to visit it prior to the recent extinction of the feudal system hitherto prevailing in Japan, cannot fail to have been struck by the scenes that there met their view. The long lines of *Daimiôs'* mansions, with swarms of two-sworded retainers about the doors,—the broad streets, along which the trains of the various nobles, with brave following of horse and foot, were constantly passing to and fro,—and the stately towers and buildings of the Castle palace itself, appearing from amidst the trees in the centre of the lines of defence composed of wide moats, stone bastions, and massive gateways,—all formed a sight which, once seen, was never to be forgotten. And although, of later years, its glory has sadly departed, the towers and out-buildings well-nigh disappeared, and many of the gateways been completely demolished, there yet remains much to interest the antiquary. The broad causeways running along the sides of moats covered in the autumn months with lotuses in full bloom and in the winter time teeming with wild-fowl,—the stone-faced embankments,—the noble trees and beautiful gardens, still exist, to tell the tale of former greatness, and to carry back the thoughts of the visitor to the olden times when the Shôgun held his Court in the present metropolis of Japan. The Castle of Yedo will always be one of the most interesting localities in the city, and therefore the following notes relating to its foundation and subsequent history may not be unacceptable.

As, in the course of this paper, constant reference must necessarily be made to the various gateways of the Castle, each of which possesses a special name, it is perhaps as well to call attention in the first place to the accompanying plan of the whole enclosure. This plan, with the exception of the very central portion, has been copied from a large map of the city of Yedo published some years back and finally revised in 1852, so that it may be taken as representing the ground-plan of the Castle as it existed immediately prior to the commencement of Japan's nearer intercourse with foreign nations. It was not permitted to publish in any map the plan of the central line of defences, but a bird's-eye view of the Castle as painted on an old screen from the former Shôgun's palace at Kiôto, together with personal observation of the works still standing, have supplied the deficiency, and this plan may therefore be accepted as correct. The course of the moats is here laid down, and the sites of the *yashikis*, or mansions of the nobles, are also marked, with various minor particulars. Each gateway is numbered, and these numbers correspond to the names given in the following list, only a few of the entrances to the palace itself being doubtful.

LIST OF GATES IN YEDO CASTLE.

1 *a.*	(?) *Naka no Go-mon*.....	or,	Central Gate.
1 *b.*	*Naka Suzumé Go-mon*..	„	Central Sparrow Gate.
1 *c.*	(Name unknown.)		
2.	(?) *Ôté-san-no Go-mon*....	„	3rd Chief Gate.
3.	(?) *Ôté-naka Go-mon*.....	„	Middle Chief Gate.
4.	*Hasu-iké Go-mon*.....	„	Lotus-pool Gate.
5.	*Nishi hané-bashi Go-mon*..	„	Western draw-bridge Gate.
6.	*Kita hané-bashi Go-mon*..	„	Northern draw-bridge Gate.
7.	*Bairin-zaka Go-mon*.....	„	Plum-forest steps Gate.
8.	*Ôté Go-mon*.....	„	Chief Gate.
9.	*Hirakawa-guchi Go-mon*..	„	Hirakawa Gate (named from district.)
10.	*Také-bashi Go-mon*.....	„	Bamboo Bridge Gate.
11.	(Name unknown).....		
12.	*Momiji-yama Go-mon*.....	„	Maple Mount Gate.
13.	*Nishi-maru o ura Go-mon.*	„	Rear Gate to the Western Enclosure (as opposed to the Chief Enclosure of the castle).
14.	*Saka-shita Go-mon*.....	„	Gate below the steps.
15.	*Uchi Sakurada Go-mon*, (also called *Kikiyô Go-mon*, after the name of a certain flower).	„	Inner Sakurada Gate, (district).
16.	*Nishi-maru Ôté Go-mon*...	„	Chief Gate of Western Enclosure.
17.	Apparently unnamed; but this, and the one immediately preceding, are together known as the *Ni-jiu-bashi*.....	„	Double Bridge.
18.	(Name unknown).		
19.	*Soto Sakurada Go-mon*...	„	Outer Sakurada Gate, (district).
20.	*Hanzô Go-mon*.....	„	Hanzô Gate, (person's name).
21.	*Tayasu Go-mon*.....	„	Tayasu Gate, (named after one of the "Three Noble Families,"—*Go-san-kiô*—allied to the Tokugawa clan).
22.	*Shimidzu Go-mon*.....	„	Shimidzu Gate, (after another of the *Go-san-kiô*).
23.	*Kiji-bashi Go-mon*.....	„	Pheasant Bridge Gate.
24.	*Hitotsubashi Go-mon*.....	„	Hitotsubashi Gate, (after the third of the *Go-san-kiô*).
25.	*Watagura Go-mon*.....	„	Watagura Gate, (district).
26.	*Baba-saki Go-mon*.....	„	Gate before the race-course.
27.	*Hibiya Go-mon*.....	„	Hibiya Gate (district).
28.	*Sukiya-bashi Go-mon*.....	„	Sukiya Bridge Gate. (district).
29.	*Kaji-bashi Go-mon*.....	„	Blacksmith's Bridge Gate.
30.	*Gofuku-bashi Go-mon*....	„	Gofuku Bridge Gate (street).
31.	*Tokiwa-bashi Go-mon*.....	„	Everlasting Bridge Gate.
32.	*Kanda-bashi Go-mon*.....	„	Kanda Bridge Gate (district).
33.	*Yama-shita Go-mon*.....	„	Gate below the hill.
34.	*Saiwai-bashi Go-mon*.....	„	Good-luck Bridge Gate.
35.	*Atarashi-bashi*.....	„	New Gate.
36.	*Tora no Go-mon*.....	„	Tiger Gate.
37.	*Akasaka Go-mon*.....	„	Akasaka Gate (district).
38.	*Kui-chigai Go-mon*.....	„	Crooked Gate.
39.	*Yotsuya Go-mon*.....	„	Yotsuya Gate (district).
40.	*Ichigaya Go-mon*.....	„	Ichigaya Gate (district).
41.	*Ushigomi Go-mon*.....	„	Ushigomi Gate (named after a *Daimiô*).
42.	*Koishikawa Go-mon*.....	„	Koishikawa Gate (district).
43.	*Suidô-bashi*.....	„	Aqueduct Bridge.
44.	*Shôhei-bashi*.....	„	Shôhei Bridge (named after a place in China).
45.	*Suji-kaë Go-mon*.....	„	Slanting Gate (from structure of bridge outside).
46.	*Idzumi-bashi*.....	„	Idzumi Bridge (from the title of a *Daimiô*).
47.	*Atarashi-bashi*.....	„	New Bridge.
48.	*Asakusa-bashi Go-mon*....	„	Asakusa Bridge Gate (district).

The above is a list of the gates as they stood in recent times; but it must not be supposed that these have always existed, nor that the castle enclosure was in olden days of the same wide dimensions as at present. This large total has been obtained by many an addition to the original number, which was very small indeed. And this remark leads us back to the consideration of the earliest days of the Castle's existence.

The foundation of the Castle of Yedo was laid in the

year 1456 A.D., during the reign of the 103rd Emperor of Japan, Go-Hanazono (1429-1464). The founder was Ôta Saëmon no Taiyu Mochisuké, commonly known as Ôta Dôku'an, a famous warrior of his age, and a chief retainer of the Uyésugi family, which at that time held supremacy in the east of Japan,—a member of it, named Uyésugi Sadamasa, being one of the then *Ku'anrei* or Governors of Kamakura, under the Ashikaga Shôgunate. Both Ôta Dôku'an and his father, Ôta Dôshin, seem to have possessed considerable skill in the construction of fortifications, and the castles of Kawagoyé and Iwatsuki,—both situated in the province of Musashi, some thirty miles to the north-west of Yedo,—are also stated to have been their respective handiwork. Some few Japanese authors assert indeed that Dôshin, and not Dôku'an, was the founder of the castle of Yedo, but these writers are decidedly in the minority, for nearly every work in which mention is made of the subject gives the younger Ôta the credit of the foundation. In particular, a book entitled *Shiudzu Gak'ketsu-ki*, (主圖合結記) which specially treats of Japanese fortifications, holds this view. Dôku'an's own residence was at Goten-yama, the rising ground in the rear of the present suburb of Shinagawa. He was stationed in this spot by the Kamakura authorities in order to guard against any attack from the East, during the troublous times then prevailing in this part of Japan. Round Shinagawa he placed a chain of small look-out stations, and the site of one of these, a lofty mound, still remains in the grounds of a *yashiki* formerly belonging to a *Daimiô* named Toki Iyo no Kami, at Takanawa,—till recently occupied by the British Legation. An inscription on a stone placed on the mound narrates this fact, and states that the name of the locality was changed to Kato by Dôku'an. But the skilful General could not but perceive the immense superiority of the present site over that which he then occupied. The numerous rivers here flowing into the Bay of Yedo afforded great facility for communication with the interior and for the transport and shipment of produce, and he was not slow in determining to erect a fresh castle higher up the coast. Only a few houses of fishermen then lined the beach, and for miles and miles inland stretched the wide plain of Musashi, covered only with reeds and sedge. The place was admirably adapted for making a stand against any army advancing from the East, and we find it recorded as a fact that in later times, whenever war broke out in this part of the country, the first care of the Commandant of Yedo Castle was to throw forward a detachment of troops to the bank of the branch of the Tonégawa which flows into Yedo Bay, in order to prevent the enemy from crossing that river. If successful in the field, these troops could inflict a severe check upon the advancing foe; if themselves worsted, they could always fall back on the Castle. Having thus selected a desirable position, Dôku'an forthwith began his work. A small book named "*Ochiboshiu*" (落穗集), which contains various items of interest with regard to the Castle, narrates that he first marked out, by means of leafy bamboos, the site upon which he purposed to build. Within the space thus enclosed were three small villages, called Chiyota, Takarata, and Iwaita. Dôku'an, on learning this from the villagers, remarked that all these names, as well as those of the department and the province, were words of good omen; and he hailed this circumstance as a fortunate sign of the future prosperity of his stronghold. It may be noticed, in this connection, that the Castle was commonly known as "Chiyota Castle" until it passed into the hands of the Tokugawa family a century and a half later on. Dôku'an commenced the work in the year 1456, and completed it on the 8th day of the 4th month in the year following, when he removed to the Castle and took up his residence there. After this the place rapidly increased in importance, and a large town soon rose up beneath the protecting shadow of the Castle walls. The following extract from a work entitled "*Kotei-ki*" (江亭記), a description of Yedo, published in 1476 (twenty years after the foundation of the Castle and during Dôku'an's lifetime,) gives an idea of the importance at that time deemed to attach to the locality, both from a military and a commercial point of view:

"The Castle of Yedo in the Province of Musashi was "first constructed by Ôta Sakingo Dôku'an. To the east "of the Hakoné Barrier there are few who can rival him. "He has always been the most influential man of his time, "—is both mighty in power and kindly in disposition, and "possessed of numerous accomplishments. During the "disturbances now prevailing, only three of the eight "Barrier provinces submit to the rule of the Sovereign; "the tranquillity or peril of those three depends on the "state of the province of Musashi alone, while the "tranquillity or peril of that one, again, depends on "the single Castle of Ôta himself. The locality in "which it stands is more prosperous than any other "province, both as regards products of sea and land, and "as being the resort of vessels and wheeled vehicles. "The ramparts around it are over 10 *jô* (*i. e.* 100 feet) in "height; they are steep and perpendicular, and consist of "firmly built stone walls for a distance of 10 *ri* (1 *ri* = "about 2½ English miles) in circumference. On the out-"side are wide moats and deep ditches, holding a large "quantity of water, but little of which is allowed to flow "by. Huge timbers are thrown across them, so as to "form bridges, kept for purposes of passage in or out "The gates are of iron, with barriers of stone, the pas-"sage-ways being also paved with the same. If, going "now to the left, and now turning to the right, one ascend "the Castle towers, the pavilion of the lord may be seen "in the midst, and in its rear his actual residence, with "guard-houses on either side. The towers and ramparts, "and the military store-houses or godowns for grain, the "stables, barracks, and other roofed buildings are very "numerous."

It is, of course, difficult to lay down with any great degree of accuracy the limits of the Castle at the time of its first construction, but its dimensions were certainly extremely narrow. From various passages, however, in the "*Yedo Meisho Dzuyé*" or "Pictorial Guide to the celebrated localities of Yedo," and in a small work entitled "*Tonoi-bukuro*," (published in 1839) containing various rules and hints for the guidance of the Castle guards under the Tokugawa régime, it would seem that Ôta Dôku'an's work comprised merely the very central enclosure of all as shown in the plan. In the year 1474, Dôku'an held a poetical meeting in the Castle, at which sixteen guests of literary renown were present. Many of the verses composed on this occasion are still extant, and that of Dôku'an himself particularly alludes to the view from his fortress. This verse runs as follows:—

"To my hut adjoins a fir-tree plain, and hard by rolls "the sea; the lofty peak of Fuji is seen from below the "eaves."

The "fir-tree plain" to which allusion is here made was a copse of firs inside the spot where the Tayasu Gate now stands; and at the time in question the present line of moat from the Watagura to the Hibiya Gate was "a sea-beaten beach, with only fishermen's huts thereon." We also read that the "plum-forest" from which the Bairin-zaka Gate afterwards took its name was only planted by Dôku'an four years later, in 1478. With regard to the general appearance of the lines of defence of the Castle, as at first constructed, no definite records have been preserved; but they cannot have been of any extraordinary strength. Without turning off into a dissertation upon Japanese fortifications in general, it may here be observed that, from the native works treating of this subject, it may be gathered that the ancient style of defences for strongholds in this country was very similar to that of the old Roman camps. First, a wide and deep ditch was dug; the earth thus displaced was then thrown up on the inside of the ditch, so as to form a firm embankment; and on the summit of this was placed a slight superstructure or rampart of wattled stakes. The entrance-gates were built of solid timbers, with heavy wooden doors, and were usually surmounted by a small platform whence archers could discharge their shafts. The description of the Castle as above quoted would therefore seem to be couched in rather more flowery terms than were warranted by the actual extent and appearance of the structure.

For more than a century after its foundation, the neighbourhood of the Castle was the theatre of civil war. The interminable feuds existing between the powerful families of the Ku'antô (the name given to the eight provinces east of the Hakoné barrier) kept this part of

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Japan in a state of anarchy, and all through this troublous period the Castle garrison played a conspicuous part. In 1477 Ôta Dôku'an was recalled to Kamakura, where military operations demanded his attention, and during his short absence Uyésugi Tomomasa, Miura Yoshiatsu, and Chiba Yoritané, all vassals of the Uyésugi family, acted as Commandants. In the year 1486, hostilities broke out between Uyésugi Akisada and Uyésugi Sadamasa,—Dôku'an's lord,—and some secret emissaries of the former contrived to slander the general to such an extent that Sadamasa ordered him to be put to death, and committed the Castle to the custody of one Soga Bungo no Kami. Next to him, Sadamasa's two sons, Tomoyoshi and Tomoöki, were in command. About this period, however, what was styled the "Later Hôjô" family was rising to supremacy in the Ku'antô, and in 1524 the Castle was attacked and taken by Hôjô Ujitsuna, when the above-named Tomoöki was completely routed, and fled away to the Castle of Kawagoyé. This is the only instance on record of Yedo Castle having sustained a siege.

The Castle remained in the hands of the Hôjô for many years later. This family, however, established their chief seat at the town of Odawara, not at Yedo, and the latter place was held by their retainers during the "four generations" of the house of Hôjô. These retainers belonged to the two families of Tôyama and Tominaga, and their command lasted until 1590. Several additions would appear to have been made to the Castle enclosure during this period, and to these reference is made later. There has, moreover, come down to modern times a copy of a diary kept by one Soboku, a famous poet; he describes therein a visit paid by him to Yedo in 1545, and the kind reception he met with at the hands of the Commandant, Tôyama Kai no Kami, who, amidst all the confusion of his preparations for an expedition against the province of Shimôsa, yet found time to entertain his guest, and to challenge him to a friendly contest of verse-making. Soboku also met here one Ôta Echizen no Kami, probably a descendant of the illustrious founder of the Castle.

In 1590, the family of Hôjô was overthrown, and the town of Odawara taken, by the famous Toyotomi Hidéyoshi, who bestowed upon his General, Tokugawa Iyéyasu, the eight provinces of Ku'antô, directing him at the same time to fix his residence at Yedo. The latter did so, and the Castle was the abode of generation after generation of the Tokugawa Shôguns, until the close of that dynasty in 1868. The history called "*Nihon Gu'aishi*" thus narrates the circumstance, and it is amusing to compare the description of the Castle, as therein given, with the flowery language already quoted above:—

"The Dainagon (Iyéyasu), after consultation with "Hidéyoshi, set up his residence at Yedo, and went "thither on the 1st day of the 8th month (of 1590). "* * * * The district of Yedo was bounded on the "East by the river Sumida, and on the South faced the "bay; to the West and North it adjoined the Plain of "Musashi. A general of the Uyésugi family, named "Ota Dôku'an, had first erected a Castle there. The "locality was flat and marshy, and over-grown with "reeds. The Castle enclosure was limited in extent, and "unsightly in appearance; the flights of steps were built "of old ship's boards. Honda Masanobu remarked, 'In "'such a place as this my lord cannot receive guests! "'I pray that it may be put in repair.' The Dainagon "laughed and replied, 'Do you entertain such a woman-"'ish idea as this? The question of repairs is one that "'can be deferred awhile.'"

True to his words, the first care of Iyéyasu was to provide for the safety of his new stronghold. In order the more effectually to secure this, he portioned out to his officers the lands in the vicinity, and established a regular cordon of fortresses, in the shape of a rough horse-shoe, around the Castle of Yedo, forming, as it were, the outworks to the main citadel. The "*Nihon Gu'aishi*" gives a full list, too long to be quoted here, of these fortresses and of the officers upon whom they were respectively bestowed. They were in all thirty-two in number, and foremost amongst them were Koga and Sékiyado in the province of Shimôsa, Iwatsuki and Kawagoyé in Musashi, and Odawara in Sagami, all of which have since continued to be the seats of *Daimiôs* until a few years back. Having thus displayed his generalship in strengthening his position, Iyéyasu was able to turn his attention to minor matters relating to his own Castle. The very first of these was the extension of his patronage to the temple of Zôjôji.

This temple, now better known to foreigners by the name of the district (Shiba) in which it at present stands, was in 1590 situated on the shore just to the east of the site afterwards occupied by the Watagura Gate. As Iyéyasu was riding into Yedo, and was approaching the main entrance of the Castle, the incumbent of the temple, one Genyo Son-ô, stood before his gate to see the procession go by. What followed is best told in the words of the priest himself, as recorded in the archives of Zôjôji, and reprinted therefrom in the "*Tonoi-bukuro*":—

"My lord, riding on horseback, was just passing in "front of the temple gate, when, strange to say, his horse "stood still, of himself, and would not advance. My lord "looked to left and right, and perceived a priest before "the gate. He gave orders to his attendants, say-"ing, 'Enquire what priest that is.' They therefore "questioned me, when I replied, 'The temple is of the "'Jôdo sect, and my own name is Son-ô.' But before "the attendants had repeated to him my answer, my lord "caught the words as he sat on horseback, and said, "'Then you are Son-ô, the pupil of Kanyo?'—(Kanyo "was the priest of the temple of Taijinji, in Iyéyasu's "own province of Mikawa).—I could only utter in re-"sponse an exclamation of surprise. 'Then I'll halt "'awhile at your temple,' said he, and he entered Zôjôji. "My lord next observed, 'I wish to take a meal by my-"'self in this temple to-morrow morning, but it is quite "'unnecessary for you to make any extensive prepara-"'tions,'—and with these words he went on his way. "True to his promise, he arrived early next day. I was "in the greatest delight, and offered him a humble repast. "Then said my lord, 'My sole reason for stating my de-"'sire to take a meal here this morning was as follows. "'For a general to be without an ancestral temple of his "'own is as though he were forgetful of the fact that he "'must die. Taijinji, in the province of Mikawa, has of "'course been the temple of my forefathers for generations "'back, but what I have now come to beg of you is to "'let me make this my own ancestral temple here, and "'to enter with me into a compact as priest and parish-"'ioner.' With tears of joy, I assented. He with all "reverence pronounced his acquiescence in the Ten "Buddhist Precepts, and then went back to the Castle. "After this, he was pleased to remove Zôjôji to Sakurada, "but on the grounds that it rendered the frontage of his "Castle too confined, it was shortly afterwards (in 1598) "removed once more to its present site to the west of the "sea-beach at Shiba."

In addition to the substantial benefits accruing to Zôjôji from the patronage of the Tokugawa family, there was also afterwards granted to each succeeding head priest of the temple the high privilege, on going to the Castle, of riding in his palanquin up to the very entrance-hall, instead of dismounting at the usual place, of which mention is made below.

Iyéyasu next turned his attention to the extension of the Castle enclosure, the erection of gates and bridges, and the excavation of the moats. The "*Yedo Meisho*" here remarks, "until that time it was merely a small "fortification, so, during the period Keichô (1596-1615) "the site of the Castle grounds was widened, and it was "made a grand structure as it at present stands, being an "immense Castle immutable for myriads of years." There can be no doubt that many additions had at this time already been made to the original structure as built by Ôta Dôku'an, and the description given in the "*Ochibo-shiu*" is sufficiently explicit to convey a tolerably good idea of the Castle at the moment when it passed into the hands of the Tokugawa family. The defences consisted of dry ditches of great width, and of grass-grown earthen embankments. In no part of the Castle were these banks faced with stone. The main entrance was where the Ôte-san-no Go-mon now stands, and hard by was a clump of trees and bamboos. The site of the present *Nishi-maru*, or Western Enclosure was then rough hilly ground, with very slight cultivation, and overgrown with peach

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

and plum trees. This hill was very far separated from the *Hom-maru*, or Chief Enclosure, and a broad roadway led below the Momiji-yama in the direction of the present Hanzô Gate. At the spot where the outer Sakurada Gate now stands was a large wooden gateway, without any door, called the "Odawara Gate," which name was afterwards changed by Iyéyasu. Immediately below the then Chief Enclosure were two others, styled respectively the Second and Third Enclosures: these were separated by dry moats, one of which is said to have been forty yards in width. The buildings, although greatly dilapidated, still stood as of yore, and were made to serve the purpose of barracks for the retainers of the Tokugawa chieftain. They consisted, for the most part, of very small *yashikis*, although there were a few of tolerably large size. The roofs were not of shingle, but were formed of large planks of cedar-wood, brought from the the province of Kai and from the neighbourhood of Nikkô in Shimotsuké. The out-houses attached to the former pavilion in the centre were merely thatched with straw, but were very spacious. Two or three small temples also stood in different places within the enclosures. These temples were, by order of Iyéyasu, moved elsewhere; and he then widened the site of the Chief Enclosure by filling in the dry ditches immediately around it. Fresh moats were next excavated, the embankments were faced with large stones brought up in junks from the coast of Idzu, and the whole aspect of the Castle was so much altered that, to quote the words of the *Ochibo-shiu*, "it seemed as though there were left no trace of "resemblance to the former structure, and its general "condition was greatly changed." The Western Enclosure was next added, the intention of Iyéyasu being to erect therein a palace for himself, in which to reside after he had resigned the reins of Government into the hands of his son. But after the consolidation of his power by his crowning victory at Sékigahara, in the year 1600, he fixed upon Sumpu (Shidzuóka, in the province of Suruga) as his future residence, and the Sakashita and Momiji-yama-shita Gates were built: the new Western Enclosure was thus united to the Chief Enclosure, and the public no longer had free access, as heretofore, to the Momiji-yama and the Sannô Shrine placed thereon, of which mention is made below. The stone-work on the Western Enclosure was added by Hidétada, during the lifetime of Iyéyasu, and the earth from the moat around it was used to raise the level of the sea-beach where the towns-people's houses stood. Minute details as to the dates of the construction of the different gates, etc., would prove far too lengthy for insertion in this paper, but it may be briefly stated that with the exception of a considerable portion of the very outside moat, and a few of the gates, the Castle as it now stands is just as it was laid out by the founder of the Tokugawa dynasty. The remaining portion of the outside moat,—from the the wide pool called Tamé-iké (above the Tora Gate) to its junction with the Kanda river just to the west of the present Suidô-bashi,—was excavated by Iyémitsu, the grandson of Iyéyasu, in the year 1636. This pool at first furnished the necessary supply of water to the Castle;—it was stocked with fish from Lake Biwa and from the Yodo river near Kiôto, and it is said that these fish changed slightly in form after their removal. The course of the Kanda river was altered shortly afterwards, so as to afford a supply of water on the northern side of the Castle. In the period Manji (1658-61), under Iyétsuna, the fourth Shôgun of his line, the deep cutting in the moat between the Suidô-bashi and the Sujikaë Gate was widened by the *Daimiô* of Sendai, by order of the Shôgun, so as to make it navigable for boats, and thus free communication was opened between the Kanda river and the sea. From this spot down to the Asakusa Gate, willow-trees were planted along the inner bank of the moat, which was in consequence styled Yanagiwara, or the "Willow Plain"—the name it bears even at the present day. The modern Oté Gate was first built in 1659, and since then has always been considered the main entrance to the Castle. The "*Ochibo-shiu*" narrates that "on the evening of the "15th of the 8th month of the year in which this bridge "was constructed, the night being very fine, the members "of the Chief Council (*Gorôjiu*), by common consent, "spread on the bridge rugs of many colors, and matting, "and held a grand drinking bout, which they kept up "until midnight. There were consequently despatched "from the Chief Enclosure some of the gentlemen-in-wait-"ing, with a message from the Shôgun to the effect that, "having heard of their being assembled to gaze upon the "moon from the bridge, he was pleased to send them an "addition to their feast from his own table." The Babasaki Gate was added in 1711, under the circumstances mentioned hereafter.

So much for the history of the gradual growth of the Castle from its foundation to its completion. It is easy to understand that to a hostile army unprovided with siege artillery, it would have been well-nigh impregnable. On the lower ground immediately fronting the sea, the lines of defence consist of high embankments,—faced on the outside with large stones, roughly hewn, and fitted together without mortar,—rising up almost perpendicularly from the surface of the moats. On the higher ground in the rear of the Castle, the moats are very deep, wide trenches, originally dry, but now having several feet of water at the very bottom, and the lofty grass-grown ramparts thus formed are further strengthened on the inner side by a low stone-faced embankment on the summit. Above the embankments all round the Castle, there stood till a few years back a slight upper defence composed of upright wooden stakes supporting a thin palisade of bamboo work daubed with clay, and whitewashed on the outside. The gates are approached, in the lower Castle, by bridges, and in the upper part by causeways on either side of which is a sheer descent to the deep moat below. The gateways are nearly all of the same shape. They are built in the form of a square, and have substantial stone foundations rising to a height of several feet above the level of the ground. On this foundation is raised a plastered superstructure of similar style to that above mentioned. The entrance on the outer side of the square consists of a heavy wooden gate, the height varying from ten to eighteen feet, covered over with a narrow tiled roofing. The inner gates are much narrower, and composed of far more massive timbers, while above them stands a second story, with white plastered walls, and surrounded with loopholes. The room in this upper story projects far beyond the gate itself, and immediately above the entrance the planking of the floor was made moveable, so as to allow of missiles being hurled down therefrom on the heads of besieging foes below. The roofs are high, with long upturned eaves, and a large bronze ornament in the shape of a fish is placed upright at each end of the roof ridge. The foundations of some of these gates are remarkably well built as compared with the rough stone-work in other places, and as an example of strength the "*Yedo Meisho*" calls attention to the masonry of the Saiwai Gate. This was erected by the Tsugaru family, of Oshiu, and being the gate by which the Shôgun always left the Castle when proceeding to the Southward, special care was no doubt bestowed upon its construction. For beauty, the same book gives the palm to the Akasaka Gate, where a long and gradually ascending slope leads up to the entrance between a clump of magnificent trees overhanging the Tamé-iké on the right, and a high grassy bank rising from the moat covered with lotuses on the left; while two *Daimiô's* mansions on very elevated sites just within the gate, look down on the whole. On the battlements of the inner moats, small towers, two or three stories high, used to stand at every corner, and of these three yet remain. In the centre of all, on the summit of the high raised terrace occupied by the palace itself, towered aloft the huge keep or citadel, on a wide and solid stone foundation, and this was no less than five stories in height. But perhaps the best idea of the appearance of the castle just after its reconstruction in the earlier days of the Tokugawa rule is to be gathered from the description given in Dr. Kæmpfer's "History of Japan;" and though this is rather a long one, it may not be uninteresting to quote it here, seeing that the writer was himself an eyewitness of the scenes he therein describes. Dr. Kæmpfer visited Yedo in February 1691, and his description of the Castle, or "residence of the *Emperor*," as he erroneously styles it, is as follows:—

"The Castle is seated about the middle of the city. It "is of an irregular figure inclining to the round, and hath

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"five Japanese miles in circumference. It consists of "two enclosures, or fore-castles, as one may call them, the "innermost and third castle, which is properly the resi- "dence of the Emperor, two other strong well-fortified, "but smaller castles at the sides, and some large gardens "behind the Imperial Palace. I call all these several "divisions castles, because they are separately, and every "one by itself, enclosed with walls and ditches. The first "and outermost castle takes in a large spot of ground, "which encompasses the second, and half the Imperial "residence, and is enclosed itself with walls and "ditches, and strong well guarded gates. It hath so "many streets, ditches, and canals, that I could not "easily get a plan of it; nor could I gather anything "to my satisfaction out of the plans of the Japanese "themselves. * * * In this outermost castle reside "the Princes of the Empire, with their families, living "in commodious and stately palaces built in streets, "with spacious courts shut up by strong heavy gates. "The second castle takes in a much smaller spot of ground; "it fronts the third, and residence of the Emperor, and is "enclosed by the first, but separate from both by walls, "ditches, draw-bridges, and strong gates: the guard of "this second castle is much more numerous than that of "the first. In it are the stately palaces of some of the "most powerful Princes of the Empire, the Councillors of "state, the prime ministers, chief officers of the crown, "and such other persons, who must give a more immediate "attendance upon the Emperor's person. The castle itself, "where the Emperor resides, is seated somewhat higher "than the others, on the top of a hill, which hath been "purposely flatted for the Imperial palace to be built upon "it. It is enclosed with a thick strong wall of freestone, "with bastions standing out much after the manner of "the European fortifications. A rampart of earth is raised "against the inside of this wall, and at the top of it stand, "for ornament and defence, several long buildings and "square guardhouses built in form of towers several stories "high. Particularly the structures on that side where "the Imperial residence is, are of an uncommon strength, "all of freestone of an extraordinary size, which are "barely laid upon each other, without being fastened "either with mortar or braces of iron, which was "done, they say, that in case of earthquakes, which "frequently happen in this country, the stones yield- "ing to the shock, the wall itself should receive no "damage. Within the palace a square white tower rises "aloft above all other buildings. It is many stories high, "adorned with roofs, and other curious ornaments, which "makes the whole castle look at a distance magnificent "beyond expression, amazing the beholders, as do also "the many other beautiful bended roofs, with gilt drag- "ons at the top and corners, which cover the rest of the "buildings within the castle. The second castle is very "small, and more like a citadel, without any outward "ornament at all. It hath but one door, and there is but "one passage to it, out of the Emperor's own residence, "over a high long bridge. The third castle lies on the "side of this second, and is much of the same structure. "Both are enclosed with strong high walls, which for a "still better defence are encompassed with broad deep "ditches, filled by the great river. In these two castles "are bred up the Imperial Princes and Princesses, if "there be any. Behind the Imperial residence there is "still a rising ground, beautified according to the coun- "try fashion, with curious and magnificent gardens and "orchards, which are terminated by a pleasant wood at "the top of a hill * * *."

(To be continued.)

The price of rice is rising in Hongkong owing to the scarcity of supply. We hear the stock here is at present almost nil, and pending arrivals from Saigon, higher prices will have to be looked for. Canton, from all accounts, does not seem to be much better, as the stock there is said to be very limited. The *Howsang* imported some 3,000 piculs, but that quantity is a mere bagatelle in comparison to the requirements of the people.—*China Mail.*

At the meeting, held on Wednesday last, of the creditors of Messrs. Henry Gribble & Co., Edward Rogers, Esq., was appointed Trustee, and we are gratified to be able to announce that a higher dividend than was anticipated will probably be the result of the winding up.—*R. S. & Nagasaki Express.*

ASIATIC SOCIETY OF JAPAN.

A General Meeting of the Society was held at the Tôkiô Dai-Gaku, on Saturday, December 22nd., Sir Harry S. Parkes, President, in the Chair.

The minutes of the previous Tôkiô meeting having been read and confirmed, it was announced on behalf of the Council that it had been determined to recommend to the Society the alteration of rule 26, changing the number of separate copies of a paper to be printed, to 50. This was put to the meeting and carried unanimously.

It was announced that Thos. H. Tripler M.D., was elected a member.

The Corresponding Secretary stated that he had received an invitation from Mr. Davis, of the Geological Institution, Mass., to exchange transactions.

Dr. Murray stated that the Vice-Minister of Education had offered the Society the use of a room at the Tôkiô Shoseki-k'wan for their meetings. It was now used by the Tôkiô Mathematical Society, and together with the Recording Secretary, he had visited it, and found it in every way suitable. He proposed that the offer be accepted, and thanks be given to the Vice-Minister for his offer. This was carried unanimously.

Mr. McClatchie then read a paper on "The Castle of Yedo."

Dr. Murray called the attention of the Society to a map of Yedo believed to represent the condition of the locality at the time of the founding of the castle by Ôta Dôk'uan. He said that the grandfather of the present owner purchased it in a book stall. It is much injured by the weather and by insects, but is still entirely decipherable. It has on it several inscriptions, one probably engraved on the block and the others in manuscript. The engraved inscription is as follows:—

"This map of Yedo during the period Chôroku (1447-1460) was originally in the possession of Okubo, and it was copied by Se Sado during the reign of the Emperor Go-Hanazono-in (1429-1464) and the Shôgunate of Ashikaga Yoshimasa (1448-1472).

"The Castle of Yedo was built by Ôta Dôk'uan who was the chief-retainer of Uyesugi Sadamasa, Governor of Kuanto. He began the work in 2nd Kôsho (1456) and ended it on the 8th of 4th month of 1st Chôroku (1458)."

The date here assigned for the building of the Castle accords with that stated by Mr. McClatchie in his paper. And as the period when Se Sado is said to have copied the map, viz., the reign of Go-Hanazono, ended with 1464, and the map had existed in manuscript before that, it is quite certain that that it relates to a time little subsequent to the building of the Castle; and may be without improbability the map of the vicinity made at the time it was laid out.

Another inscription in manuscript relates to the manner in which the map was preserved. It runs as follows:—

"THE MAP OF YEDO DURING CHÔROKU.

"This map seems to have been in the possession of my ancestor and published by him many years ago. In the course of years the wooden block on which it was engraved came to be used as a shelf in a closet. Last year when a carpenter had taken down the shelf in order to make some changes in the room, he found the map cut on the block not injured except by some marks of nails. If I had put the shelf back as it was, it would have been of little service, hence I have mended the injured spots and put it again to its proper use, hoping that everybody will from this be able to understand the origin from which the present prosperous city sprang!

"*N.B.*—If any map shall differ from this even in a single point, it must be a counterfeit.

"Ôta Tokitoshi, his private property.
1st month of 4th Kokwa (1847)."

Taking the last year of Chôroku as the date of the map, it is now (1877) probably 417 years old, and believed to be the oldest authentic map of Yedo extant. There are other old maps of Yedo, one known as the *Keicho Map* about (1596), and another the *Sho-ho Map* about (1644.)

The most striking points in this representation of Yedo in its early days are, *first*, that at that time the present city was a large number of separate villages. Thus we have Kanda-mura, Yushima-mura, Hongo-mura, Ushigome-mura, etc., which then were distinct communities, but which subsequently were merged into one large town, the districts of which, however, perpetuate the village names.

A *second* noticeable point is the large area which since that time has been reclaimed from the water. Many of the streams which then spread out in broad marshy ponds have been turned to use in supplying the Castle moat with water, or have been excavated and made to do duty as navig-

Original from UNIVERSITY OF CALIFORNIA

able canals. The site of the present University is here represented as covered with a pond of water formed by the expansion of the Kanda river. Since that time this river has been made in part to feed the moat and furnish a supply of water for the city, and the remainder provided with a new route to the Sumida river through the deep canal constructed by the *Daimio* of Sendai. The whole of the area now occupied by Tsukiji, the garden of Hamagoten and portions of the shore near the Shinbashi Station and southward, is still at the date of this map covered by water. The change has doubtless been produced partly by natural causes and partly by human agency. The rivers emptying into the head of Yedo Bay bring down with them vast quantities of detritus, which thus have in time materially shifted the shore line. He had been told by a gentleman resident in Tsukiji, that even within the past four years a great increase in the length of the sand spit at the river's mouth has been observed. The natural growth of the land was doubtless assisted by artificial means at some period, a fact which is preserved in the name Tsukiji, which means made ground.

There is a dotted line drawn across this map which is said to represent the route by which the famous hero Yoshiiye, often known as Hachiman-taro, i.e. the eldest son of the God of War, marched when on his expedition against the Northern barbarians, who under the leaders Takehira and Iyechira were defying the Imperial authority. The expedition took place in 1091, and is a favorite subject of Japanese art. There is in the Asakusa library a famous picture in the Gosé style, which he had seen, illustrating this expedition.

He would only add further, that with all due deference to the opinion of the gentleman who rescued this valuable map from the ignoble position of a shelf for his closet, he could not quite accept his claim for it of infallibility. He had made various efforts to compare it with others of known accuracy, but the distances are utterly unconformable. Taking the Castle, however as a centre, the directions towards various prominent objects are reasonably correct. Hence, he hazarded a conjecture that the general draft of the map was made by sketching from the heights of the castle, with little or no checking by means of measurement of distances. Taking it all in all, however, he thought it might be regarded as a valuable record of the history of Tôkiô, and trusted the members would pardon him for the time he had taken in giving an account of it.

Dr. Faulds said he had heard of a curious derivation of the word *shiro* (Castle). Some Japanese gentlemen were sailing on the Rhine, when they were struck with the resemblance of the word "*schloss*" when transformed into Japanese sounds to the word *shiro*, and thought that the latter must have come from Germany. He added that, curiously enough, his informant had not succeeded in finding the word occur in Japanese literature, prior to the early influx of western ideas. Perhaps some scholar here can throw light upon the subject.

Dr. Veeder remarked that the reference made in the paper to the widening of the deep moat known as the Sendai Hori by the *daimio* of Sendai, suggested a question which he hoped that Mr. McClatichie or some other gentleman present might be able to answer. It was well known that the current tradition in Yedo is that the *daimio* of Sendai was compelled to execute this great work at his own expense, as a penalty for a grave offence against the Shôgun. This was the account he had repeatedly heard given of the matter during the first four years of his residence in Tôkiô. But on visiting the localty about two years ago in company with the late Mr. Hatakeyama, the former Director of the University of Tôkiô, he was informed by him that this tradition was wholly an error; and that the truth appeared to be that the Shiyafugun, observing that the *daimio's* wealth and power were growing so great as to threaten to become a source of danger to the Shiyafugunate, sought at once to cripple to some extent the resources of the *daimio*, and greatly to strengthen his own Castle, by imposing upon him a task requiring the labour of vast number of men and a large the expenditure of treasure. Such a task was the widening of the canal referred to. It appears, also, from Mr. McClatchie's own statements respecting this matter, that the execution of this work, so far from being a penalty, was probably to some extent a voluntary work, in recognition of which certain distinctive privileges were conferred upon the *daimios* of Sendai and their retainers. If Mr. Hatakeyama's statements were correct, the performance of such a vast work in obedience to an absolute command, would be an interesting illustration of the absolute authority wielded by the Shôguns, and the implicit obedience rendered to that authority even by the most powerful princes of the empire. The question which he wished to ask of the author of the interesting paper to which they had listened was, whether in his investigation on the subject he had met with any trustworthy historic statements in relation to this point.

Mr. McClatchie in reply said that he had also heard the explanation give by Dr. Veeder, but as the members were aware, it was a most difficult task to verify a statement of such a nature. He had said in his paper that the privilege accorded to the retainers of the *Daimiô* of Sendai of passing through the gates with lighted fuses attached to their matchlocks, had "probably been given in return for the service rendered," but this was only a conjecture on his part.

Mr. Satow exhibited a Japanese printed book entitled *Oho-Yedo Dzusetsu Shifuran*, containing maps of Yedo of the periods 1558-1570 and 1624-1644. From the former it would appear that little change had taken place in the general character of the locality since the period described by Dr. Murray, but the second showed that in less than a century the city had assumed a great size.

The President observed that the labour and care which Mr. McClatchie had devoted to the subject of the paper would be fully appreciated by the Society. We learned from it that the principal growth of the city of Yedo was the work of little more than a century, that it was only a place of small extent at the end of the sixteenth century, and that a hundred years afterwards it had expanded to the large dimensions described by Kaempfer, which were scarcely inferior to those of the present day. The political condition of the country at that period, which made Yedo the centre of the Empire, accounted doubtless for this rapid development. The history of Yedo from the time that it passed into the hands of Iyeyasu might be said to be the history of the country itself, and the Castle, with its extensive walls and picturesque moats, formed probably the most durable monument of the genius and power of that great master-mind, which the country possessed. It was obvious, therefore, that any information that could be obtained, not only as to the construction of the city but also as to its traditions and the events which had occurred within its walls, would throw light on the recent history of Japan, and it would be seen, therefore, that the subject of the paper suggested a wide field of interesting and useful enquiry. He concluded by moving a vote of thanks to Mr. MacClatchie, which was carried by acclamation.

The meeting was then adjourned.

By a private letter from the North, we learn that the long-pending Emigration Convention between Spain and China has been at last signed, and so far as China is concerned, ratified. It may, therefore, be expected that the Chinese Minister, who was appointed so far back as eighteen months ago, will shortly proceed to the three countries to which he is accredited, viz., the United States of America, Spain and Peru. Our informant says the Minister may brave the discomfort of a journey overland from Peking to Shanghai, in order that no time may be lost in fultilling the object of his Mission, but we must say an attempt of the kind would be a very trying ordeal, especially to an old men of over sixty, at this time of the year. But it is more probable that His Excellency will leave Peking when the river is opened again next year, and his departure from China may therefore be looked for towards the end of next Spring. We have seen a text of the Convention, and the terms seem to us to be fair to both parties.—*China Mail.*

We understand that the total applications for bonds under the new Chinese Loan have amounted to £3,700,000, of which about £1,000,000 was applied for in London, and nearly a similar amount in Shanghai. It was expected that it would be taken up readily, but we fancy the actual success has been greater even than the promoters anticipated.—*S. C. & C. Gazette.*

The British Steamer *Nemesis* of London changed her colours on Saturday, and will in future be known as the Belgian S.S. *Perusia* of Anvers.—*China Mail.*

THE NEW SYSTEM OF TRANSLITERATION.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Tôkiô, 22nd December, 1877.

SIR,—I observe in the issue of the *Mail* of the 15th instant, that at a meeting of the Asiatic Society, held at Yokohama on the 8th instant, Mr. E. Satow informed the audience, that in common with Mr. Aston and several other students he had arrived at the conclusion, that in transliterating Japanese words, each sign of the syllabary should be represented by a separate combination of letters, and that the Japanese spelling should be followed, sign by sign, instead of the system of transliteration by ear being used. He added, that this was an absolute necessity for scientific purposes, and included hereunder "the translation of Japanese texts, the study of etymology, and the compilation of grammars and dictionaries of the written language."

Acting upon the conclusion thus arrived at, Mr. Satow, in his treatise on "The Introduction of Tobacco into Japan" transliterates the Japanese names and words he has occasion to use, according to the syllables they contain, regardless of their pronunciation. Among the Japanese names for the tobacco plant, we thus find *Bimbau-sau*, "poverty plant," and *Ahau-gusa*, "fools herb," which if written as pronounced would be *Bimbô-sô* and *Ahógusa*.

The same system of transliteration is followed by Mr. Chamberlain in his charming paper entitled "The Maiden of Unahi." We here find *Setsutsu* for *Settsu*; and the name of the ancient Japanese work "Manyôshiu" is rendered as "Mañefushifu"; and so on.

A comparison of the two modes of writing the last quoted word ("Manyôshiu" and "Mañefushifu") will show, how radical the difference is between the system hitherto followed and the one now inaugurated by the gentlemen above mentioned. I am perfectly convinced myself that in a few works, such as grammars and dictionaries of the *written* language, a system such as the one under discussion is by far preferable to the one formerly used. At the same time, however, I cannot but look upon the innovation as a dangerous one, *unless it be strictly limited to works actually relating to etymology*. In all other treatises on Japanese subjects and in translations of Japanese texts, whether they be prose or poetry, as long as they are intended to throw light on the history and literature of Japan, and the character and habits of its inhabitants, I am of the opinion that the new system is entirely out of place. An overwhelming majority of the public, who read such papers, are not conversant with the numerous rules for the contractions, elisions and assimilations of the *kana* characters, nay, perhaps, are even unacquainted with the characters themselves. They are consequently utterly at a loss to make out the pronunciation of Japanese words, if written as now proposed by Mr. Satow. For instance, how many persons, when reading in a chapter of Japanese History that "*Taikafu*, some time after having defeated *Mouri*, prince of *Chiyaushiu*, laid plans for an expedition to *Teuzen*," would understand it to mean, that *Taikô*, after having defeated *Môri*, prince of *Chôshiu*, meditated an invasion of *Chôzen*? In fact, since Mr. Chamberlain's paper appeared in print, I have heard many people speak of the "Maiden of *Unahi*," with "*h*" aspirated, and I have met more than one person, who when reading that the Maiden's tomb was still shown somewhere between *Kaube* and *Ohosaka*, did not know where those places were, little suspecting that they were meant for *Kôbe* and *Ôsaka*; and yet, in the latter cases the difference between the two systems of transliteration is comparatively slight.

It seems to me that, except in works of a purely etymological nature, the principal object of transliteration should be to form a substitute for the Japanese character, that can be availed of by all, whether students of the written language or not, and that will enable everybody to write and read such Japanese words as will necessarily appear in any treatise on Japan and the Japanese. To ensure this, the system of transliteration should be as simple and easy to pronounce as possible, conditions that are certainly not fulfilled by the new system. On the contrary, if the new mode of transliteration is allowed to take the place of the former one in all scientific and literary works and treatises on Japanese matters, without distinction, it will virtually prevent those who are not scholars, if not from reading them, at least from deriving much pleasure or information therefrom; while on the other hand, the few, who understand the system and consequently are able to read the transliterated words correctly and retain their proper sound in their memory are those very persons, *who from their knowledge of the written language require no transliteration.*

I may add, that the new system, for other reasons than those already stated, is utterly impracticable for translating Japanese poetry, an assertion which is sufficiently borne out by the fact that Mr. Chamberlain, in the versified portion of the above mentioned paper, is compelled by the metre to employ the old system, for which inconsistency he makes a kind of apology in foot notes.

In connection with this subject allow me to relate the following short story.

A promising young sculptor, a countryman of mine, while studying in Rome modelled a statue, on which those to whom he first showed it, bestowed much praise. Only one or two slight modifications were suggested by the friends and carried out by the artist, and the figure was now pronounced by everybody to be as near perfection as attainable. The sculptor himself for some time looked upon the offspring of his genius with unmingled satisfaction; yet anxious to improve that, which was already unsurpassable, he began to search for defects, and was not long in discovering what he thought to be such. He commenced to make alterations, notwithstanding the remonstrances of his friends: the nose he thought too straight, and so altered it to suit his ideas; the form of the chin was not graceful enough, so he modified its curve; the position of the left arm seemed unnatural, and this also he remedied. Strange to say, the more alterations he made on the statue, the more he found were required, until one day it flashed across his mind, that the once beautiful figure was now ungraceful and not true to nature. In despair he flung his mallet at the clay, and thus destroyed in a moment the work he had been toiling at for years, and to perfect which had been his fondest ambition. Disappointed and broken-hearted he could never touch the chisel again, and he is now living the retired life of a Dominican monk in one of the monasteries of Rome.

The various phases through which the system of transliteration, that first appeared fifteen years ago in Rev. S. R. Brown's "Colloquial Japanese," has passed, remind me of the story of the statue. Dr. Brown's plan, in itself a good and comprehensible one, has been modified by Hepburn, Aston and Satow, until in the Dictionary recently published by the latter gentleman, we have at last got a system that can hardly be improved upon. This method should, I think, be followed as universally as possible and should not, except when quite imperative, be allowed to give way to such a system as the one now inaugurated. To endeavour to introduce the new method into other than strictly etymological and grammatical works, will, I fear, bring about a result similar to the fate that befell the statue: the whole system will become so unnatural and incomprehensible, as to prove almost useless in practise.

In conclusion I venture to express a hope, that the above named gentlemen and others, who by persevering labour and untiring investigation have acquired such a rich fund of knowledge, will do all that lies in their power to give the results of their researches and studies to others in as accessible a form as possible.

Yours faithfully,

WILLIAM BRAMSEN.

FOREIGN REFUGEES IN LONDON.

(Saturday Review.)

The Vicissitudes of Families are a favourite subject with writers of the histories that verge on romance; but there might be far more exciting and pathetic reading in faithful narratives of the vicissitudes of individuals. No doubt one may draw impressive lessons of the instability of human greatness and the vanity of human ambitions from the slow decay of an ancient race, or the gradual descent of its lineal representatives from the dais of the castle to the chimney-corner in the cottage. But generally in these cases the family has had ample time to reconcile itself to its dwinding grandeur, and has subsided with slow-growing resignation from wealth and power to toil and poverty. We may listen to such a story with a thrill of interest, but there is little room for strong personal sympathy. With individuals it is altogether different. Whether their downfall may have been brought about by their misfortunes or by their faults, it s happily not in ordinary human nature to help feeling for the victim of some crushing change. If a man who was born with fair prospects is carried to a pauper's grave after a life of humiliation and wretchedness, we are more disposed to pity than to judge him. But it is not very frequently that our sympathies are appealed to by the publication of one of these melancholy tales. Men who have succumbed in such painful struggles seldom leave autobiographies behind them. Probably for the latter part of their burdensome existence they have made it their business to burrow out of sight, enveloping themselves and their proceedings in secresy. Nor do the relations and acquaintances who kept them at arm's length, or even those casual benefactors who capriciously reached them a helping hand, care to condescend on particulars which but rarely redound to their credit. The glimpses we get at such shattered lives are for the most part to be had in the proceedings of some Coroner's jury called in to pronounce a hurried opinion on the closing act in the eventful history. A case of this kind was briefly reported the other day in the newspapers. There was an inquiry held at the Vestry Room, Soho, on the body of the Count de Lally-Tollendal, who had been discovered dead in a coal-cellar. We fear that there was nothing very singular or exceptional in the circumstances, unless it is to be found in the fact that the deceased bore a well-known historical name. He was the greatgrandson of that Lally-Tollendal who, after distinguishing himself with the Irish brigade at Fontenoy, figured as Governor of the French settlement of Pondicherry in the gallant, though unsuccessful, campaigns against Clive, and who subsequently, in the words of Macaulay, "was dragged to the common place of execution with a gag between his lips." Thus there was a certain sad similarity between the life of the man who died in Soho and that of his more distinguished ancestor who was guillotined in Paris; but the parallel, so far as it goes, was all in favour of the latter. The refugee lingered out the latter part of his life in squalor, and died in the most abject misery. An officer of the Société de Bienfaisance gave evidence on the subject. He had known the Count for a considerable time as a pensioner of the Society. The Count did not stoop to beg, but he resigned himself to be helped. Nearly every day the old gentleman presented himself for the dole of bread, which was handed to him neatly done up in a parcel, and which he acknowledged with a courteous bow. He seems to have had no money at his command, or next to none, for he was indebted for occasional sleeping quarters to the charity of a tailor, who appears to have asked neither rent nor questions of him. It is fair to say that, according to the evidence, he was not actually starved; rather, like Prince David of Rothsay in the *Fair Maid of Perth*, he "ceased to exist." Thanks to inadequate nourishment, his bodily strength gave way, and it is clear that cold and other hardships had their share in hastening his end. We can easily conceive that the superfluities of his wardrobe had gone to the pawnbroker's and the doctor pronounced that the place where he lay was unfit for human habitation, and "that it was a mystery how any one could live in it for a night." We need make no surmises as to whether the old man's life was embittered by involuntary contrasts between his lot and that of the ancestors whose title he inherited. But, from the evidence of the Benevolent Society's officer, we may be sure that he was hampered in his struggle for life by the consciousness of his rank and his feelings as a gentleman. And what may have made the struggle in his case at once more intense and more exasperating was the belief that, if he could only hold out long enough, he might exchange starvation for riches, and regain a station befitting his rank. At least it is suggested that he was the next heir to a great inheritance, though it might be rash to pronounce too confidently on the grounds for this assertion.

Possibly the Count's case may have been an extreme one; no doubt it was unusually romantic; but we have no reason, as we have said, to believe it altogether exceptional. The quarters round Soho and Leicester Square must always conceal an extraordinary amount of suffering. The foreign refugees who take advantage of the privileges of asylum here have, as a class, no counterpart in English society. We have scapegraces enough, no doubt, who find themselves feeding upon husks with the swine, and with little hope of having fatted calves killed for them In the time of the Australian gold mania many disclosures came to light which were freely turned to account by newspaper Correspondents and writers of fiction. We heard of the sons of peers turning their clumsy hands to cookery, of baronets driving bullock drays and serving in suttlers' shops. At this moment doubtless there is many a solitary shepherd up the country in Australia and New Zealand who has held Her Majesty's commission or graduated with credit at a University. We do not suppose that the reflections of these men are of the most satisfactory or inspiriting character; but, nineteen times out of twenty, they have the doubtful consolation of knowing that they have only their own folly to blame; and, besides, they have strength and health to earn a sort of living. That they have their seasons of intense depression we may be sure; but at all events the body is clothed and fed, and in the distractions of an active out-of-door life they may learn to forget themselves, and even to be happy. When the body is alternately hard worked and tired out the mind must find alternate exhilaration and repose. But the fate of many of the foreign refugees in London must be a refinement of an Inferno on earth, and the only thing that can possibly help to cheer them is that hope is not entirely left behind. As they were banished by one turn of the political wheel, another revolution may possibly bring them home again. But in the meantime all is as cheerless as may be. Many of them were men in good positions, and already they are far advanced in life. Their habits, such as they were, had been formed; probably they were thinkers and students; possibly they were well to do and accustomed to luxuries. At least they lived in some comfort on their earnings as professional men, or were in the receipt of high wages as skilled artisans. That their prospects were suddenly clouded may have been due either to their patriotism or to less creditable causes. Either way, the consequences are the same, although in the former case they may find comfort in an approving conscience. They had to leave home at a moment's notice; and if they had little time to waste on packing, it was of the less consequence as they had to make their escape as unobtrusively as possible, and with the lightest conceivable baggage. Except for the clothes in which they stand up, they land in England almost as desitute as on the day they were born. Even Englishmen, with a home or hotel before them, must have experienced a depressing sensation on stepping out on a London railway platform on a damp morning after a holiday spent in the sunny South. Imagine what it must be to a man who has been lapped all his days in sunshine, and who sees his apprehensions as to our climate surpassed by the grim reality. He has no place to go to, no friends, no introductions, and the scanty sum in his purse must be carefully husbanded, since it is more than problematical when it will be renewed. Yet there is nothing for it but to give himself over to be pillaged by the cabman who drives him to the purlieus of Leicester Square. No wonder if, under the first impressions of that sombre quarter on a dripping day, he should recall to mind the reputed proclivities of the English to suicide. Nor do things improve on further acquaintance. The rare days of genuine in sunshine an English summer are but a pallid mockery of what he has been used to. The gleams that break the gloom of the interminable winter are ghastly reflections of his earlier memories. The weight of the leaden skies and of the damp-laden air lies heavily on a soul that is already sufficiently inclined to sink. The enclosures in Soho and Leicester Squares are somewhat less repulsive now than they used to be; but the blackened streets and the grimy sparrows are but a poor substitute for the Villa Reale, the Pincian, the Cascine, or the Tuileries. When he strolls out, the exile has to pick his way over slippery pavements, or wade through seas of mud, all splashed by passing cabs and omnibuses. As he slinks homewards, wet and weary, we shrink from following him into his sleeping den.

Even if one of these luckless strangers happens to be far better off than the mass of his exiled compatriots, his way of living is not to be envied. We have tried, from motives of curiosity, one or two of the foreign restaurants with which the refugees quarter of London abounds, but curiosity has been extinguished by the sight and smell of suspicious sauces and mysterious *entrées*. The cafés are as different from the gay establishments on the Boulevards as the watery compound of cloudy chicory from the fragrant essences of Tortoni or Bignon. But what have the crowd of foreign refugees to do with

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

such parodies of luxuries as these? Like the unhappy Count de Lally-Tollendal, they have to live from hand to mouth, or rather, to starve as best they can. Only themselves and the more intelligent sergeants of police, or an occasional officer of some charitable Society, can guess how they keep body and soul together. You may see one of them under the glitter of the gaslights, shuddering in a threadbare frock-coat tightly pinned to the throat, hungrily eyeing the costermongers' barrows or the windows of the cheap butchers. To many of the better educated the loss of their books is nearly as painful as the deprivation of food; and they are conscious of accomplishments which ought to fetch their price. They are ashamed to beg, and they are innocent of the use of their hands; while they have been learning to their sad experience that their education and accomplishments are a drug. Considering that they find it so difficult to help themselves, it is well for their wives and families that they should be lonely, however it may add to their personal grief But it is hard to imagine a more miserable fate; they are eager to work, were it only to distract themselves, but chances of employment perpetually elude them in the most bustling city in the world; they are starving by inches in the midst of luxury, with scarcely a ray of hope to lighten their future. If they still cling to any shreds of self-respect, it is but added poignancy to the inevitable wretchedness. We shall not follow them further. Their best friends in their dying moments, if they are fortunate enough to find company at all, are probably the officials of the parish, with whom perhaps they have not even a common medium of communication; and a pauper's funeral closes the melancholy story. When one thinks of what they may have hoped to be, and of what they are, such lives and deaths are a melancholy commentary on the irony of destiny and the vanity of human wishes.

CONTENTS OF A FRENCH LADY'S VALISE.

(New York Herald.)

A most curious spectacle is the inside of a French lady's valise, that small or middling-sized travelling trunk which is kept in hand, and which is supposed to contain but a few indispensable articles for not over two days' stay with a friend in the environs.

We have had the good fortune to look into one of these, and after having described the toilet of the owner, an authentic list will follow of the appliances, without which, she informed us, no Parisienne could visit. Her *champetre* toilet was a checked gingham moss and pink coral. It was made with a long paletot opening on a Louis XV. vest, and trimmed with pink plisses made of lawn and edged with narrow lace. These tortuous rose borders were kept in order down the front by ribbon hirondelle bows. A bow à la hirondelle is made in the shape of a swallow. The sleeves are *engageantes* that is, open to the elbow, and here ornamented with a deep plisse, and inside a fall of lace and organdie. The same stood up around the throat. The hat was a *toit de chaume* or thatched roof, a flat shape, coming over the eyes. This protection to the skin is made of coarse straw and simply trimmed with green chenille gauze in which nestles a sparrow. Long Suede mittens, parasol and fan to match, both of pink foulard the latter hanging from a wide watered moss rib' on studded with three handsome silver initials. The jewellery was *or percé*. A strong perfume of ixora scented the atmosphere in which moved the *visiteuse*. The inside of the valise will reveal more of the lady's tastes.

At the bottom was a long curling-stick, not made of box-wood as formerly, but of a knot-handle, in which could be screwed and unscrewed a tapering hollow made of brass. The hollow is filled every morning with boiling water. Round this the false curls are brushed in spirals. The heat of the water is a substitute for curling-tongs, and to this novel invention is due the perfect crispness and gloss of the long anglaises which French ladies wear down to their waist. It also explains how they manage to get *coiffé* without singeing their hair. All puffs, marteux, &c., are dressed in the same way. Rolled neatly in a worked canvas envelope made in the shape of an old-fashioned housewife was a foulard night-mantle and night cap to match, both pale blue. We say night-mantle and not night-gown, because it was a mantle with a plisse all round, and long enough to touch the ground; It had a sailor's collar, and plisse frills round the wrist, and there was a breast-pocket for the handkerchief. But the nightcap revolutionized our preconcieved notions of this somnolent article, The blue one we mention was pretty enough in itself; a Charlotte Corday caul and fall only, it seems scarcely credible, just on the forehead, were neatly tacked underneath two false flat hair locks! The nose, not being slept on, the space above it is, of course, a safe part for fanciful decoration, and our imaginative Parisiennes, who abhor homeliness, fall asleep with a deep-rooted conviction that even then they are *coiffé*. Two pairs of stockings came next, but so fine and so open that they looked like soap-bubbles. Next to these lay a soft leather roll containing a pair of shoes with six microscopic buckles on bars down the instep; the heels were as pointed as pegs. The brushes, combs, scent-bottles, and toilet accessories, were in different compartments lining the top of the valise; but a note worth mention is that all the perfumery was of the same kind—all was scented with ixora. It is now the fashion to be tout à la violette, tout à l'opaponax, tout à la marechal, or tout of any other essence. but no scents are mixed; there is not one for the hair and another for soap or handkerchief. To be known by one's perfume is to resemble, in one respect at least, a flower.

The blotter was very ingenious; a French lady may be a very attractive person and yet not know all her irregular verbs; she therefore travels with a writingcase called *sous main dictionnaire*. This contains all indispensable writing materials and a map of the French chief towns, with their departments marked out at a glance; a view of the participles, their rules and exceptions, a lexicon of the difficult words and the proper forms of condolence, congratulation, &c. This *sous main*, or "under one's hand," is a wonderful help to certain tourists. Another indispensable is in the refreshment line. Parisiennes like bonbons; they never leave home without a sweet of some kind, and the fashion in the season is fruit pastilles, but they have the disadvantage of either getting dry or of melting. An ingenious inventor has foreseen this, and manufactured round boxes of crystal, into which fruit cakes are poured in a liquid state. Three or four spoonfuls of water obtained at a station are dropped on when wanted, and the fruit is restored to its natural flavour and colour. Pineapple, raspberry, and apricot are the favourites pastes eaten in this natural state; a small spoon is found under the lid of these new bonbonnieres. The portemonnaie was a small morocco pouch, marked with initials. The needlework was carre asiatique, quite a novelty for anti-macassars, doilles, table-covers, mats, &c., It is of the simplest material as far as groundwork is concerned, but of the richest description in point of embroidery. A square of printed calico is tacked on another of stout linen. All the squares of the design are filled in with a flower worked with Algerian floss; all the lines and blocks are followed down with either point russe, point de feston, or point de corail. The coloured called Madras, that is, yellow and chocolate, are the most original. Beautiful contrasting shades enliven the dark parts. It is impossible to detect the groundwork when a square is finshed. Some of the designs are kaleidoscopic, and look like the rose over cathedral porches.

One of Dentu's novels, in a yellow paper cover, lay on the top with a leaf cover which represented a Louis XV. heel and sole; the former for the holder, and the latter for the paper-knife. A pocket-handkerchief tidy was scented with ixora. It was made of fine cloth, worked with Breton designs and galloons. An ivory apple held puff and powder. The etui magique contained knife, scissors, pincers, and all the fine arts for cheek, eyebrows, and lips.

Thus in a moderate valise of the period we have found not only food for the mind and body, but art and comfort combined. Its investigation has given us as good an idea of the fashions as could a long article on the subject. It may here be noticed that French style exists to a greater degree at present than French fashions, for the latter have been greatly simplified since ladies go to bed in mantles and wear their undergarments by day in one single piece.

A number of outside accessories are now indispensable, and manufacturers of the *article Paris* are not idle.

REUTER'S TELEGRAMS.

LONDON, December 27th, 1877.

THE WAR.

The Emperor of Russia, in replying to an address from his subjects, said he considered that there remained yet much to be done, but that he hoped Russia would accomplish her mission.

The Servian troops have captured Appalanka, Leskovats, and Kurshumlie, and after eight hours heavy fighting crossed into Moravia, where they succeeded in taking Peunella (?) and Nish.

The bombardment of Erzeroum is imminent.

LONDON, 25th December, 1877.

THE WAR.

Despatches report that Suleiman Pasha has garrisoned the Quadrilateral, and the remainder of disposable troops are being concentrated at Adrianople for the defence of the City.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

It is believed that the Porte has resolved to continue the war to the last extremity.

The Russian forces are investing Erzeroum.

RUSSIA.

The Emperor of Russia met with a most enthusiastic reception on his recent return to St. Petersburg.

LONDON, December 24th. 1877.

THE WAR.

Despatches report that the proposal made by Turkey for mediation has failed, and that the German Ambassador at Constantinople has recommended the Porte to enter into direct negociations with Russia.

SERVIA.

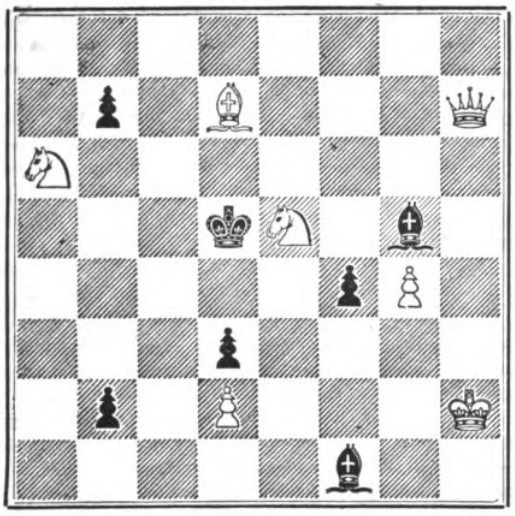
The Servian Troops are marching against Widdin.

TURKEY IN ASIA.

The intended Russian attack on Erzeroum is impeded owing to snowy weather.

LONDON, 22nd December, 1877.

The London newspapers, with the exception of the *Times*, agree that a demand should be made calling for a vote on account of Military preparations.



The Russian Government is mobilising an extra sixty thousand troops.

PROBLEM,

by W. S. PAVITT.

(Competing Problem.)

BLACK.

WHITE.

White to play and mate in 4 moves.

SOLUTION OF C. CALLANDER'S PROBLEM OF LAST WEEK.

White.	Black.
1.—K. to Q. Kt.'s 4th.	1.—Anything.
1.—Kt. to K. B.'s 4th.	2.—Anything.
3.—Kt. or P. mates.	

Correct answers received from W. H. S., Tôkiô; and Q., Yokohama.

TRIPLE ACROSTIC.

My third perplexes most folk, but is easy to my second,
My first, thereto appended, a pseudonym is reckon'd.

1.

Conspicuous o'er all my peers, and yet, confession risible,
I must admit that ne'ertheless I often am invisible.

2.

Consider well the last two words of my uncouth fifth verse,
I think you'll say it could not be grammatically worse.

3.

An officer, or captain bold, whose colour might be lighter,
But even then I question if he'd make a better fighter.

4.

Pray use me not, but if you wish another to attack,
Accuse him straight, and manfully, but not behind his back.

5.

Our glory has departed. But in the good old days,
We showed a profit, handsome, sure, and then could say "we pays."

6.

By nature hard as diamond, yet easy to be guessed,
As you will say when in these words I show myself confessed.

7.

In ages past my current swift defied the arts of man,
But now full trains, with human freight, my vanquish'd waters span.

8.

And now sweet Jane, or John, or Wilhelmina, or Orlando,
Finis coronat opus et solvitur ambulando.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—We have again to report an active market with slightly higher prices. *Yarns*:—In 16/24 and 28/32 a fair business has been done, and quotations for 16/24 show an advance. For *Shirtings* a moderate demand continues, and rates have improved. *Velvets* are in good enquiry, but there have been only small transactions in *T. Cloths*.

Grey Shirtings:—						
7 lbs.	38½ yds.	39 in.	per pce.	$1.55	to	$1.90
8 lbs.	38½ yds.	44 in.	,,	1.90	to	2.30
8 lbs. 4 to 8½ lbs.	38½ ,,	39 in.	,,	1.65	to	2.35
9 lbs.	38½ ,,	44 in.	,,	2.10	to	2.52½
T. Cloth 7lbs.	24 ,,	32 in.	,,	1.40	to	1.57½
,, 6lbs.	24 ,,	32 in.	,,	1.10	to	1.25

Yarns.—

No. 16 to 24	per picul...	$30 00	to 33.00
No. 28 to 32	per picul...	$32 50	to 35.50

White Shirtings:—			
60 to 64 reed 40 yds. 35 in.	per pce.	2.10	to 2.30
Turkey Reds 24 yds. 30 in. 2—3 lb.	per lb.	0.65	to 0.82½
Black Velvets		7.25	to 8.25
English Drills 14/15 lbs. 40 yds, 30 in.		2.45	to 2.70
Taffachelass 12 yds, 48 in.		1.65	to 2.00

No. 38 to 42	...per picul...	$36.50	to 39.50
Reverse Twist 16-24	,,	$34.00	

Woollens.—The position of this market has not changed materially during the past week. Plain *Mousselines de Laine* are fairly saleable, and prices are firm. Printed Goods remain very quiet. *Black Plain Orleans* show a better value, and Figured Goods are in demand. There is less doing in *Blankets*, whilst some sales of *Pilots* and *Unions* at quotations are reported.

Plain Orleans	40—42 yds. 32 in.	5.60	to 7.00
Figured Orleans	29—30 yds. 31 in.	4.25	to 5.50
Shimagoro	30 yds. 30 in.	3.75	to 5.25
Italian Cloth	—30 yds. 32 in.	0.25	to 0.32
Camlet Cords	29—30 yds. 32 in.	5.75	to 6.00
Camlets Asstd.	56—58 yds. 31 in.	—	
Lastings, Japan	22—30 yds. 32 in.	12.00	to 13.00
Plain Mousselines de Laine	—30 yds. 30 in.	0.17½	to 0.18½

Figured Mousselines de Laine	...30 yds. 30 in...	0.25	to 0.28½
Multicolored ,,	...30 yds. 30 in...	0.30	to 0.40
Cloth, all wool plain or fancy	...48 in. to 52 in...	0.80	to 1.20
Presidents	...54 in. to 56 in...	0.60	to 0.65
Pilots	...54 in. to 56 in...	0.45	to 0.55
Union	...54 in. to 56 in...	0.60	to 0.72
Blankets, scarlet & green 6 to 8 lbs.	...per lb ...	0.40	to 0.45

Sugar.—There is no demand for White Sugar, which has further declined. *Formosa* is almost unchanged, and only a small business has been done in it.

Sugar:—Takao in bag	per picul...	$4.00
,, in basket	,,	$3.90
Taiwanfoo in bag	,,	$3.90
do. in basket	,,	$3.80
China No. 1 Ping-fah	,,	None
,, No. 2 Ching-pak	,,	$7.50 to $7.70
,, No. 3 Ke-pak	,,	$7.50 to $7.70

China No. 4 Kook-fah	per picul...	$6.60 to $6.80
,, No. 5 Kong-fun	,,	$5.80 to $6.30
,, No. 6 E-pak	,,	$5.10 to $5.50
Swatow Brown	,,	None.
Daitong	,,	$3.40 to $3.50
Japan Rice	,,	$2.10 to $2.50
Kerosene Oil, nominal	nomi.	$3.90

Kerosene Oil.—Prices are weaker in consequence of arrivals from China, but there is a fair demand at $3.80 to $4.00 per case.

EXPORTS.

Silk.—During the week there has been almost a complete cessation of business, the cause for which must be attributed to the great uneasiness that prevails concerning the future course of events in Europe. Holders remain very firm in their demands, the majority declining to enter into further transactions until after the New Year. Prices show no alteration.

Total export to date is 16,598 bales. Stocks are augmented to 2,000 bales.

		In London at 4s. 0½d. per lb.	*In Lyons at f. 5.10 per kilo.*
Hanks,—Superior	Nominal. $630 to 650	22/6 to 23/2	62.75 to 64.50
,, Best No. 1 & 2	$600 to 620	21/6 to 22/2	60.00 to 62.00
,, Good No. 2	$580 to 590	20/10 to 21/3	58.00 to 59.00
,, Good all round No. 2½	$550 to 570	19/11 to 20/7	55.50 to 57.00
,, Medium No. 3	$520 to 540	18/11 to 19/7	52.50 to 54.50
,, Common to inferior No. 4 & 5	$490 to 510	17/11 to 18/7	50.00 to 52.00
Oshius,—Extra	—	—	—
,, Best	—	—	—
,, Good / ,, Medium	$520 to 560	18/11 to 20/3	52.50 to 56.00
Hamatshi,—Good to Best	$490 to 510	17/11 to 18/7	50.00 to 52.00
,, Common to Medium	$450 to 470	16/7 to 17/3	46.00 to 48.00
Kakeda,—Extra and Best	$660 to 680	22/6 to 24/2	65.50 to 67.00
,, Good	$620 to 640	22/2 to 22/10	61.75 to 63.75
,, Medium	$580 to 600	20/11 to 21/6	58.00 to 60.00
Filatures	$650 to 750	23/3 to 26/6	64.50 to 74.00

Tea.—Business has in a great measure been suspended since the 22nd instant, owing to Christmas holidays. Settlements for the interval are about 1,000 piculs, and present no feature to require special comment. Prices remain unchanged.

Common	$10.00 to $12.00	Fine	$21.00 to $24.00
Good Common	$13.00 to $15.00	Finest	$27.00 to $32.00
Medium	$16.00 to $17.00	Choice	$34.00 Nominal.
Good Medium	$18.00 to $20.00	Choicest	—

EXCHANGE AND BULLION.

Exchange.—In the early part of the week rates advanced to 4/0⅜ for 6 m/s. Bank, but have since receded, with very little business doing.

Rates close as follows:—

REPORTS.

The *Oceanus* reports: Left Shanghai on Dec. 7th; had fresh N. W. winds in the China Sea, and strong north and north-east winds on the Japanese coast. On the 18th inst., when off the Kii Channel, met with a fierce N.N.E. gale, lasting 14 hours.

The *Duke of Abercorn* reports: Left Shanghai on the 13th Dec, and passed the Saddles at 7 p.m. on the 15th. Had the wind from E.S.E. to N.N.E in the China Sea. Made Udsi-sima on the 19th, with a strong N.N.W. wind blowing. Passed Chimney Rock on the 19th, at 1 p.m., wind N.E. by N., fresh and squally, and made Satsuno-misaki light that night at half-past ten o'clock. On the 21st instant had a fresh gale from N. N. W.; made Oosima that day, bearing N. N. E. 25 miles. On the 22nd had baffling gales from N. W. to West, blowing in heavy gusts. Shortened sail to lower topsails and reefed courses. This weather lasted 16 hours, then moderated, and fell calm in the morning of the 22nd instant. On the afternoon of the 22nd had light winds, continuing to 4 p.m. on the following morning, when she was hove to, to wait for daylight. The wind freshening from Northwest, bore up at 6 o'clock for Kanonsaki lighthouse. Passed the Point at 7 a.m., and took a pilot half an hour later; was all day engaged in beating up to the anchorage, where she arrived at 7 p.m.

The *Malacca* reports: Left Hongkong December 18th and passed the *Sunda* and U. S. *Monocacy* that afternoon bound in. Had a strong monsoon; and on the 21st instant shipped a heavy sea which carried away part of the forward bulwarks. Had strong N.E. winds to Yokoshima; thence moderate weather to this port.

The *City of Peking* reports: Left San Francisco December 4th at 12 m.; had strong West and South-West winds with rough sea.

W. & C. SCOTT & SON.

FIRST PRIZE MEDAL and DIPLOMA OF HONOUR awarded, CENTENNIAL EXHIBITION, Philadelphia, 1876. For excellence of Materials and Workmanship in their PREMIER QUALITY and medium grades. Their New PATENT TRIPLEX action and COMPENSATING LUMP.

CHOKE BORES ON GAME.

WE have received numerous letters testifying to the excellence of our Guns. The following are a few extracts.

The W. & C. SCOTT & SON No. 10 choke bore "is all its name implies." I have killed stone dead grouse flying at 92 yards, and at 50 and 60 yards it will kill every time. At duck shooting it is perfection.
Brainherd, Minnesota. T. P. C.

I have just returned from North Carolina (Currituck Sound). I cannot say too much in praise of my choke bore. I have killed ducks at 60 yards, dropping dead out of the bunches at that distance. I consider I have an extraordinary gun, and deem it my duty to speak in the highest praise of guns of your manufacture. Wishing you all the success you deserve.
Red Bank, N.J., 1877. G. A. W.

From Captain BOGARDUS, Champion Shot of the World.—The Breech-loader you furnished me with is the best *proportioned* and most *effective* gun I ever owned or used. Its shooting is perfect, and I have won every contest since receiving it including my late English matches. I fully recommend the Scott as the gun.

I have carried guns of your make from Nova Scotia to Florida, and from the Adirondacks to the Pacific, and find them all I could wish for.
Cazenova, N.Y. L. W. L.

The guns for myself and friends have safely arrived. I have now great pleasure in acquainting you that I am extremely glad in possessing them. I have tried them and they give me great satisfaction. My friends are also very pleased too.
Yedo, Japan, March, 1876. V. E. B.

I have just received the Two fine guns ordered for me by Mr. B. F. Stevens, London, and desire to express my entire satisfaction of them. Such fine weapons which while they do credit to a reputation already so well known as to need no establishing, deserve from me some expression of my appreciation of the manner you carried out my wishes. A more substantial evidence of my estimation of the gun is to be seen in the fact that I have this day directed Mr. Stevens to order another for me
G. R. W.
Paymaster U. S. Navy.
United States Flag Ship *Omaha*.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World

INSURE YOUR HEALTH

BY TAKING

HOCKIN'S

IMPROVED SEIDLITZ POWDER.

IT differs from the Seidlitz Powders usually sold in having all the ingredients in one bottle, is quite tasteless, and may be taken by persons of all ages as a *Cooling Beverage, Mild Aperient* or *Brisk Purgative* according to dose. Its extensive use during nearly HALF A CENTURY proves its valuable qualities as a Purgative Saline, and the fact that the powder retains its qualities for any number of years renders it a most reliable and efficient Domestic Medicine. It will be found invaluable to Families, Travellers, or Emigrants, as a preventive or remedy in all cases of **Sickness, Headache, Bilious Attacks, Fevers,** and the other ordinary ailments of life.
